ELNA-SONIC SDN. BHD. (Malaysia)	ISO 14001	MY03/60718	SGS

### Please read the following warning and cautions !!

The Electronic components shown in this catalog are designed and produced mainly for such general purpose electronic equipment as audio and visual equipment, home appliances, office equipment and information processing and communication equipment.

If you wish to use these components in medical equipment, transportation equipment, (automotive, train, ships, etc), aircraft, spacecraft, security systems or other equipment that requires high security application, you are required to confirm application through your own testing and own judgment.

Regardless of a component intended use, if high safety application is required, it is recommended that you shall establish a protective or redundant circuit and shall conduct own evaluation test.

It is highly recommended that you shall follow our "Cautions for using"

Also it is recommended that you shall obtain technical specifications from Elna Co., Ltd to ensure that the component is suitable for your intended use.

It is not our responsibility for any kind of problems without technical specifications.

Specifications and dimensions shown in this catalog are subject to change without prior notice.

Be sure to read "Cautions for Using Electrolytic Capacitors", before using those products.

## ■ “GREEN CAP”

“GREEN CAP”, ELNA considers the global environment and it is a product that doesn't use the hazardous substance and “Lead Free” in the plating of terminals and outer Sleeves.  
The product in this catalog is 'GREEN CAP'.

The hazardous substance is

Pb : lead, Cr<sup>6+</sup> : hexavalent chromium, Hg : mercury and Cd : cadmium,  
PBB : the polybrominated biphenyl, PBDE : the polybromo-diphenyl ether,

## ■ Regarding to various environmental Regulations

- It suits “EU RoHS Directives”.
- According to the content of RIP3.8TGD(Technical Guidance Document which is published on 26 May 2008), our electronic components are “articles without any intended release”.  
Therefore they are not applicable for “Registration” for EU REACH Regulation Article 7 (1).
- ELNA develops the products without substance of very high concern(SVHC). DEHP(CASNo.117-81-7) was contained as some covering material.
- If you need “Halogen-Free” products, please consult with us.

### Terminal area plating material and sleeve material

#### ● Aluminum (Polymer hybrid,Conductive Polymer Solid Electrolyte) electrolytic capacitors

Category	Terminal area plating	Plating thickness	Sleeve
SMD (Chip type)	φ 3 to 6.3	Sn-Bi	12μm Sleeve less
	φ 8,10	Sn-Bi	12μm PET or sleeve less
	φ 12.5	Sn 100%	12μm PET or sleeve less
	φ 16 to 18	Sn 100%	12μm Sleeve less
	Supplementary terminal of RT* type	Sn 100%	12μm PET or sleeve less
	Supplementary terminal of RY* type	Sn 100%	12μm Sleeve less
Lead terminal	Sn 100%	12μm	PET or sleeve less
Snap-in	Sn 100%	12μm	PET
Screw terminal	—	—	PET

#### ● Electric double layer capacitors

Category	Terminal area plating	Plating thickness	Sleeve
Coin cell	Single cell	Sn 100% or Sn+Cu	5μm Sleeve less
	Piled cell	Sn 100%	5μm PET
	Lead type	Sn 100%	5μm PET
Large capacitance	Lead terminal	Sn 100%	12μm PET
	Snap-in terminal	Sn 100%	12μm PET
	Screw terminal	—	PET

Note : Sn : Tin Bi : Bismuth Cu : Copper

Please inquire when hoping excluding the above-mentioned terminal plating and sleeve.

## ■ About the Sn whisker

### 1. Sn whisker-generating mechanism on the lead wire

On the surface of the lead wire, Sn and aluminum will get mixed instead of getting dissolved.

The surface condition is complex, aluminum will expand due to the heat and humid causing the oxidation and hydration. This reaction will cause the inner stress and influence the development of the whisker.

### 2. Generation control of the Sn whisker

In the past, Sn whisker was reduced by adding a lead(Pb). Aluminum electrolytic capacitor was also using the Sn-plate with Pb on the lead wire.

But due to environmental regulation such as the “ELV” and “RoHS”, Pb was strictly prohibited since 2000.

Lead wire not containing the Pb was used, which caused the Sn whisker problem to happen again.

Since Sn whisker is influenced by the mixture of aluminum, method of reducing the aluminum on the welding surface was to clean the lead terminal using the alkali.

However since the welding area of the large case size is larger compared to the small ones, whisker will generate even if it is cleaned by alkali. This whisker will scatter outside of the capacitor and potentially cause the short-circuit. Countermeasure of keeping the whisker inside the capacitor is being discussed.

### 3. Prevention of scattering of Sn whisker

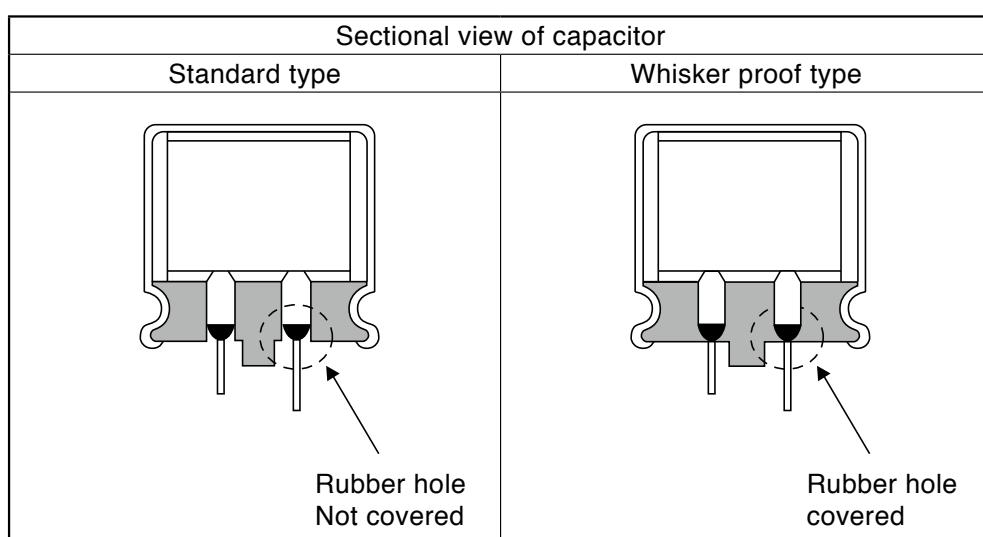

In the past Sn-plate with Pb was used and recently plate with Bi is being introduced to prevent the whisker from generating. However the whisker will still generate under the temperature and moisture condition.

Therefore, the current method of preventing the whisker will not completely prevent the whisker from generating.

In our company, we are developing and supplying products with design of preventing the whisker from scattering outside the capacitor.

This design corresponds to series such as the RJD and RJE for 105°C use, RKD and RPK for 125°C use.

If it is required for the other series, please feel free to make an inquiry.

## ■ Ordering Information

Please order by the multiples of the minimum order quantity (MOQ).

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## ■ Systematized Classification of Aluminum Electrolytic Capacitors

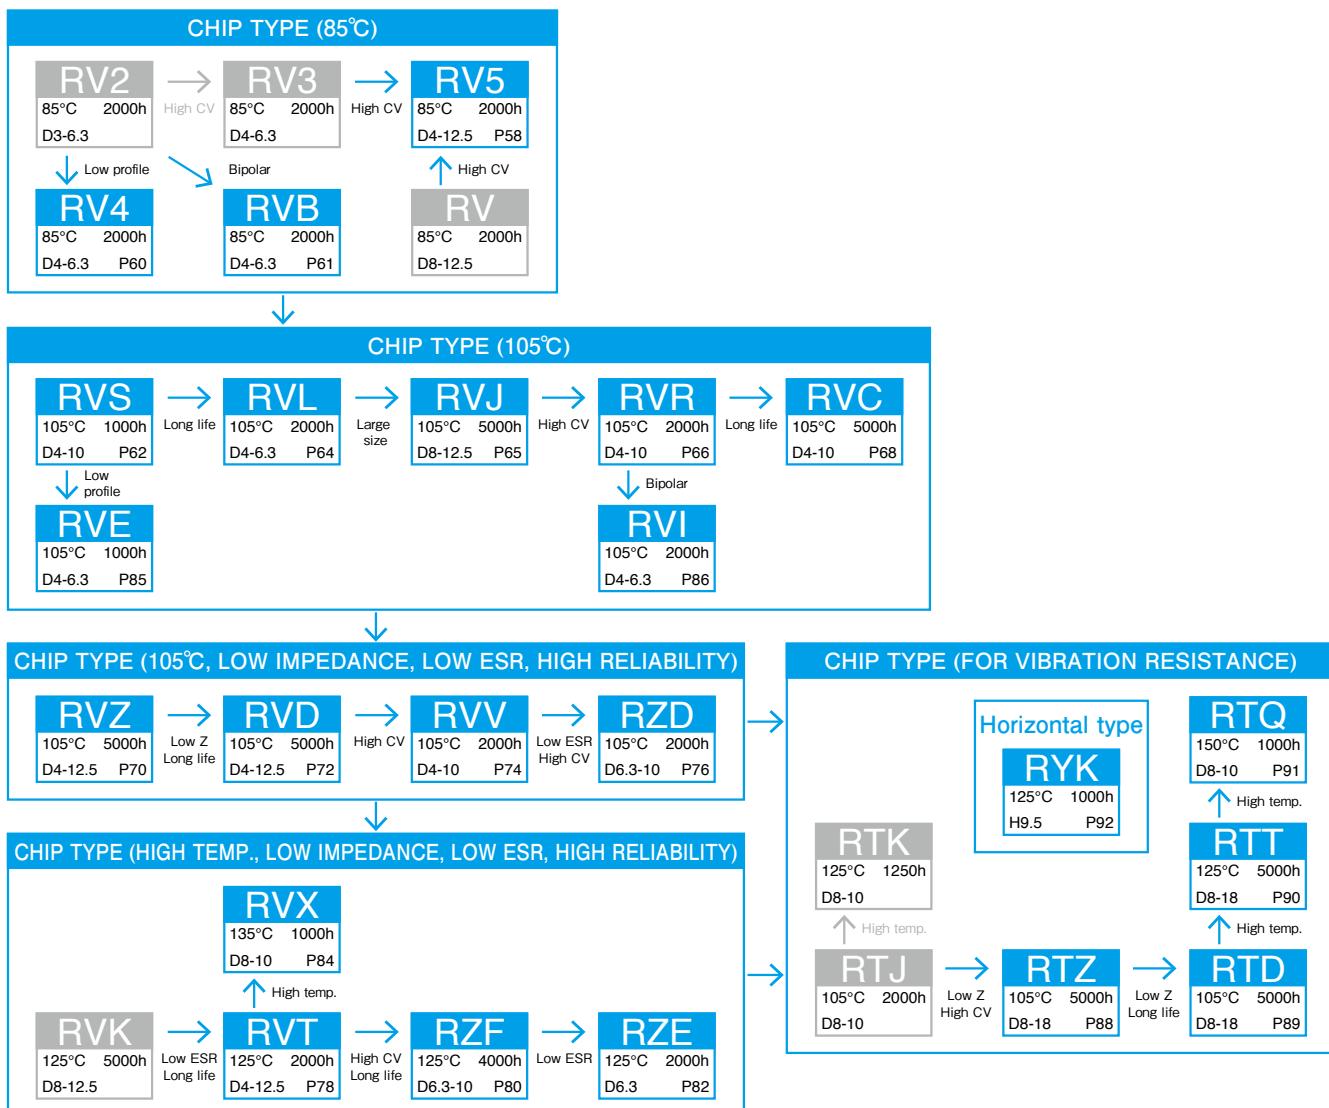

### ● Conductive Polymer Hybrid Aluminum Electrolytic Capacitors

### ● Aluminum Electrolytic Capacitors with Conductive Polymer Solid Electrolyte

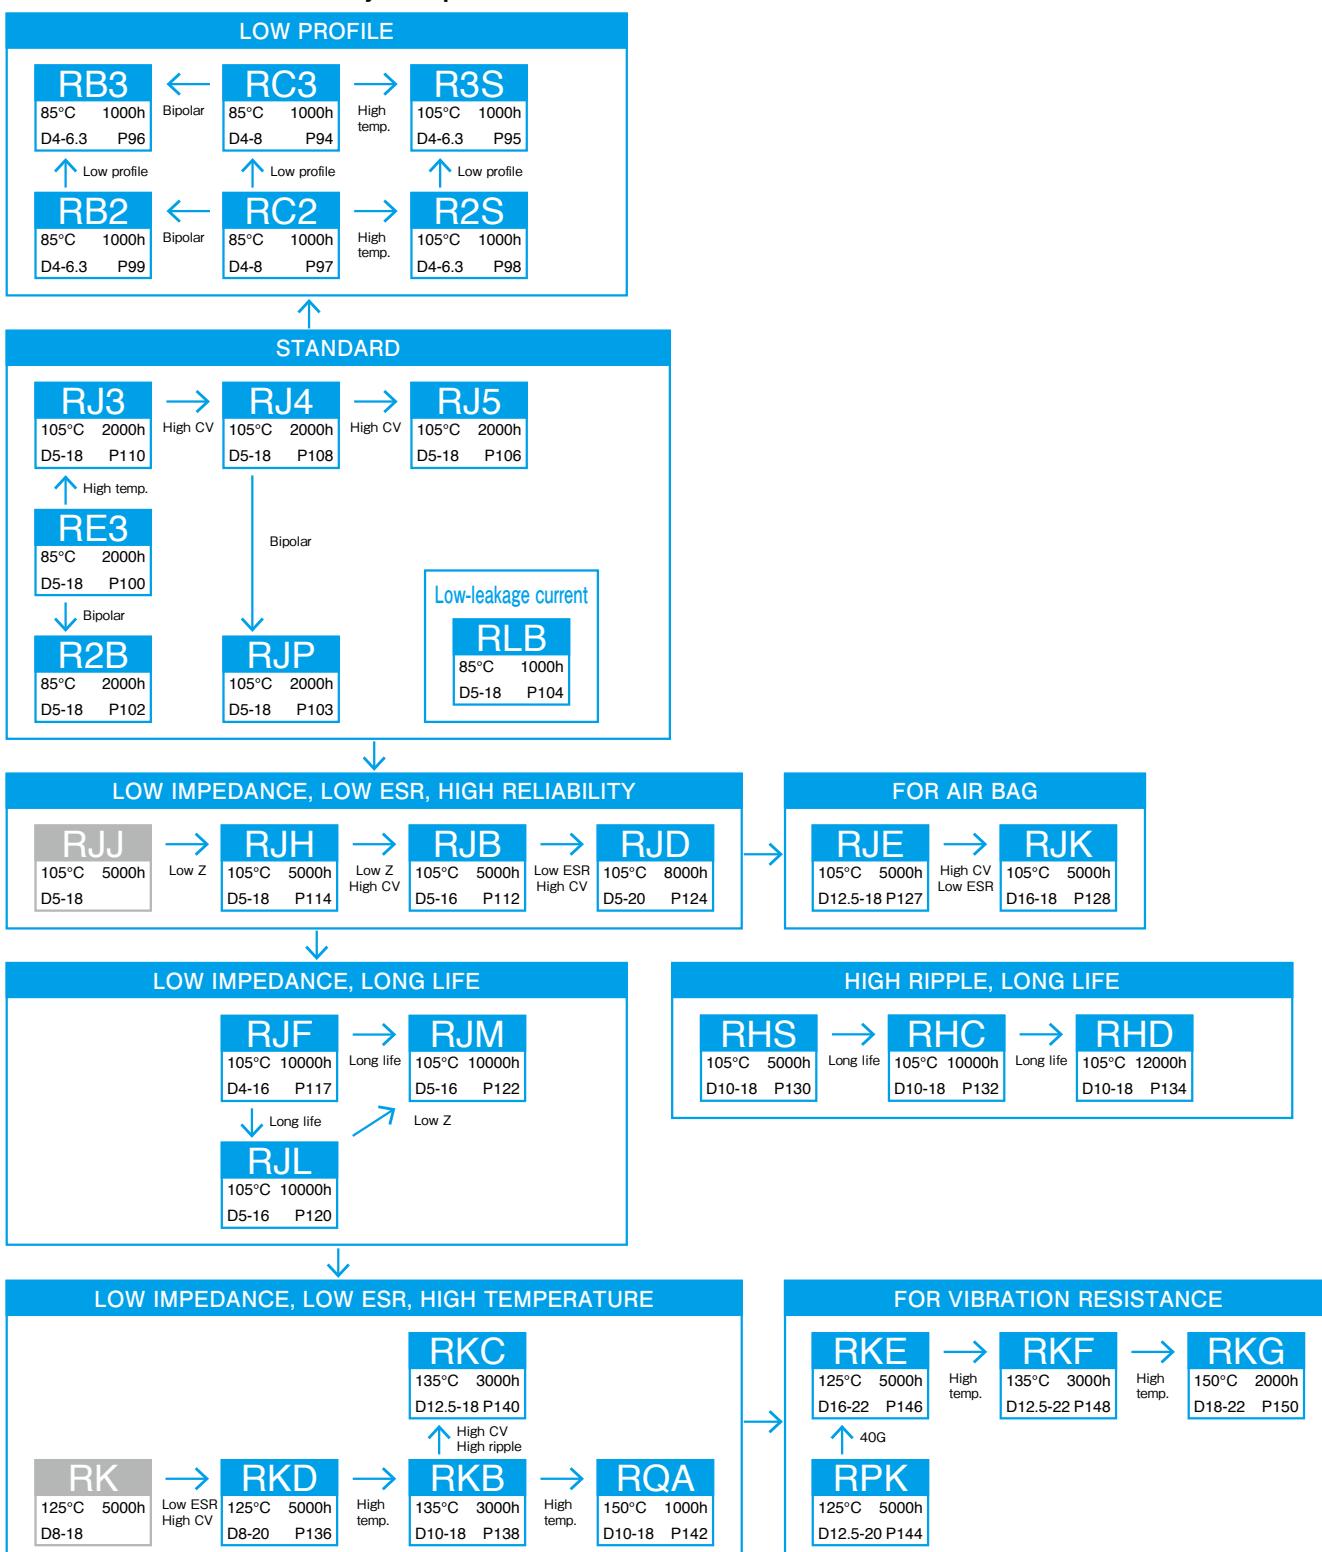

### ● Chip Type Aluminum Electrolytic Capacitors

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## ■ Systematized Classification of Aluminum Electrolytic Capacitors

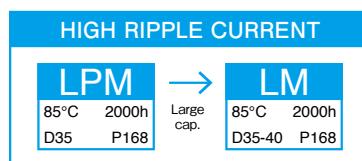

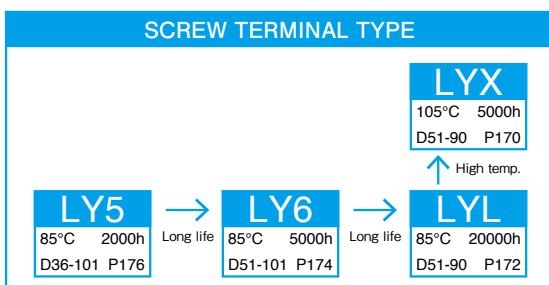

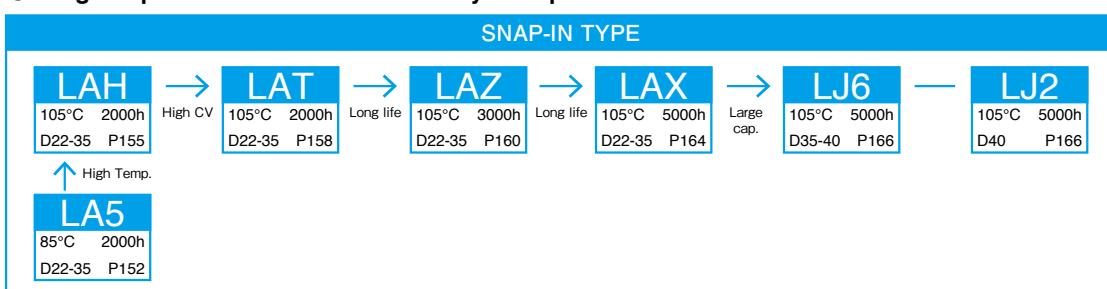

### ● Miniature Aluminum Electrolytic Capacitors

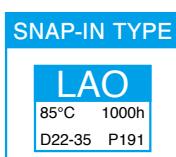

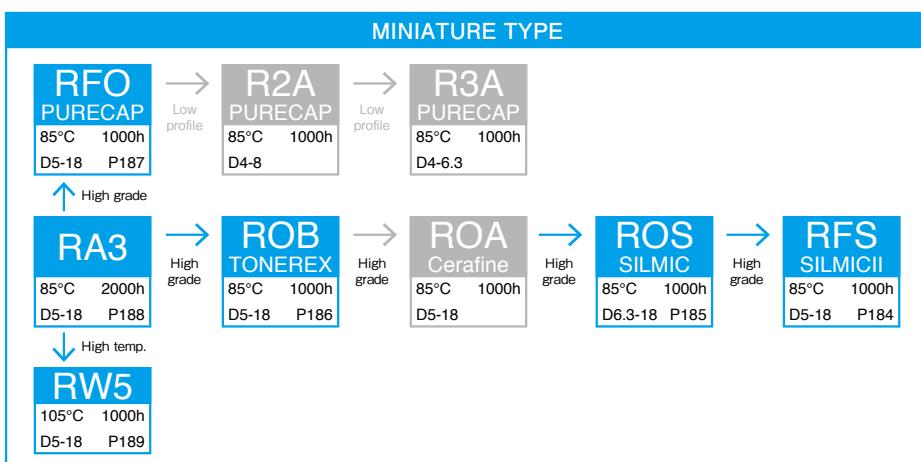

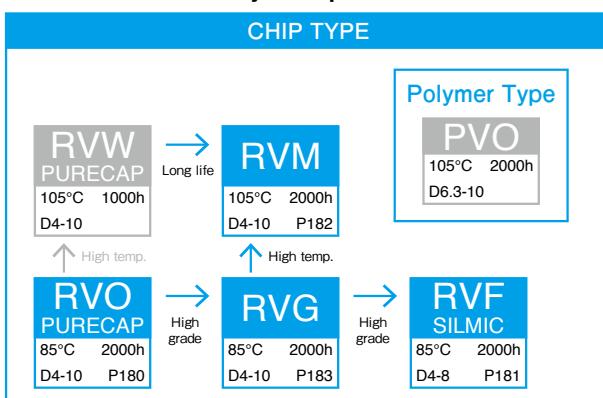

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## ■ Systematized Classification of Aluminum Electrolytic Capacitors

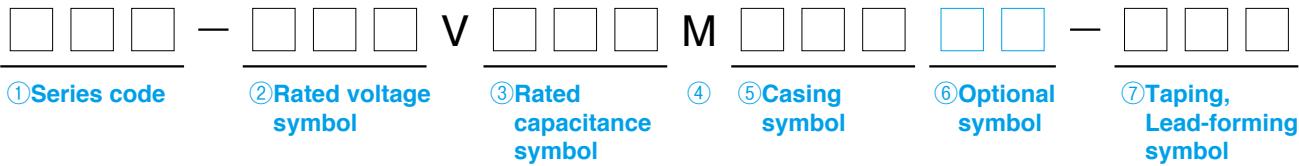

### ● Large Capacitance Aluminum Electrolytic Capacitors

### ● Aluminum Electrolytic Capacitors For Audio

## ■ Product Symbol System for Aluminum Electrolytic Capacitors

### ①Series code

Please refer to the page of each series.

### ②Rated voltage symbol

Write down the rated voltage itself ; however, write 2R5 for 2.5V, 6 for 6.3V.

### ③Rated capacitance symbol

The symbol denoting nominal capacitance shall consist of three numerals.  
The first and second numerals shall represent the significant figures of nominal capacitance in the unit of microfarad ( $\mu\text{F}$ ).  
And the third numeral shall represent the number of zeros following the significant figures.  
A decimal point is expressed with "R."

Example

Rated capacitance ( $\mu\text{F}$ )	Symbol
0.1	R10
1	010
2.2	2R2
33	330
100	101
2200	222
33000	333
470000	474

### ④Capacitance tolerance symbol

Example

Capacitance tolerance	Symbol
$\pm 10\%$	K
$\pm 20\%$	M
-10 to +30%	Q
-10 to +50%	T

### ⑤Casing symbol

Please refer to the page of each series.

### ⑥Optional symbol

Plating

Example

Symbol	Contents
#	Sn 100% plating +PET sleeve (lead terminal type)
U	Sn-Bi plating (chip type)
T	Sn 100% plating (chip type)

For Automotive

Example

Symbol	Contents
Q	Based on AEC-Q200
N	Based on AEC-Q200

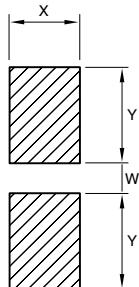

### ⑦Taping, Lead-forming symbol

Write down one of the forming symbols given on page 16 to 19 for taping and lead-forming capacitors.  
When taping or lead-forming is not necessary, leave the boxes blank.

**■ Recommended land pattern and size**

(Vertical chip type)

- Standard type

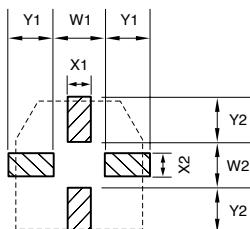

Case Size $\phi D \times L$	Land Size			Thickness of Solder paste
	X	Y	W	
4×4.5, 5.3, 5.7, 5.8	1.6	2.6	1.0	0.15
5×4.0, 4.5, 5.3, 5.7, 5.8	1.6	3.0	1.4	0.15
6.3×4.5, 5.3, 5.7, 5.8	1.6	3.6	1.9	0.15
6.3×7.7	1.6	3.6	1.9	0.15
8×6.5, 6.7, 7.7, 8.7	1.6	4.0	2.1	0.15
8×10, 10.5	2.5	*3.5	*3.0	0.15
10×7.7, 8.7, 10, 10.5, 12.5	2.5	*4.0	*4.0	0.15
12.5×13.5	3.2	6.0	4.0	0.15

\*For Vibration resistance use  
 $\phi 8 \times 6.5$        $Y=4.5$   $W=1.0$   
 $\phi 8 \times 10$ ,  $\phi 8 \times 10.5$      $Y=4.0$   $W=2.5$   
 $\phi 10 \times 10$ ,  $\phi 10 \times 10.5$      $Y=4.5$   $W=3.0$

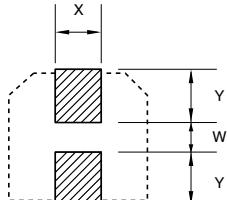

- For vibration resistance type

RTJ, RTK series

Case Size $\phi D \times L$	Land Size						Thickness of Solder paste
	X1	X2	Y1	Y2	W1	W2	
8×10	2.5	2.5	3.0	3.5	4.0	3.0	0.20
10×10.5	2.5	2.5	4.0	4.5	4.0	3.0	0.20

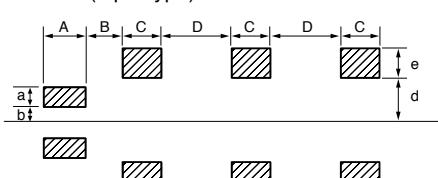

RTZ, RTD, RTT, RTQ, RTV, RMD, RMF, HT, HTK, HTX series

Case Size $\phi D$	Land Size			Thickness of Solder paste
	Y	W	X	
8	4.0	2.5	5.0	0.20
10	4.8	3.6	5.0	0.20
12.5	6.6	3.2	7.0	0.20
16	7.8	5.0	10.5	0.20
18	8.8	5.0	10.5	0.20

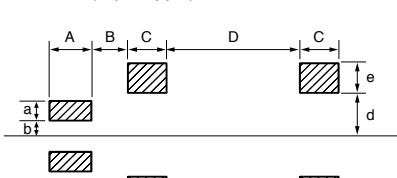

**(Horizontal chip type)**

- □9.5×24.0 (8 pin type)

(Unit : mm)	
	8 pin
A	4.0
B	1.0
C	3.0
D	5.5
a	1.5
b	1.0
d	3.0
e	2.0
Thickness of Solder paste	0.15

- □9.5×19.0 (6 pin type)

(Unit : mm)	
	6 pin
A	4.0
B	1.0
C	3.0
D	9.0
a	1.5
b	1.0
d	3.0
e	2.0
Thickness of Solder paste	0.15

## ■ Recommended soldering conditions

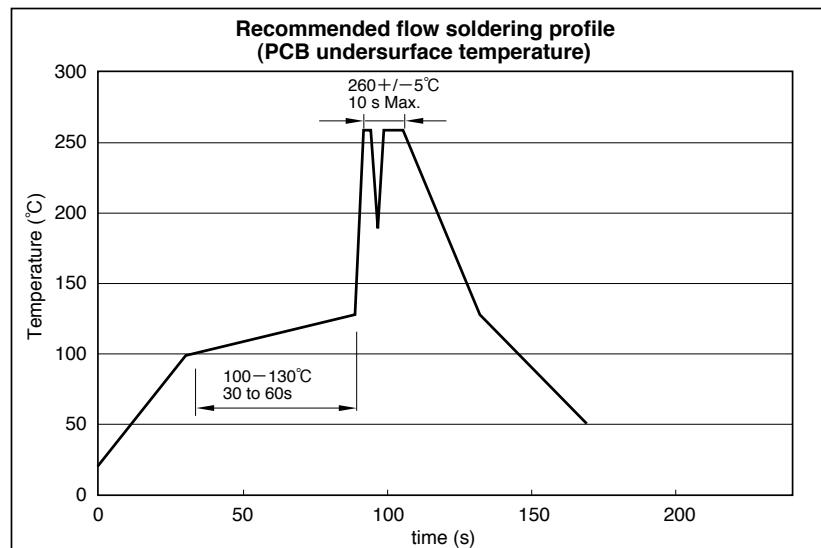

### ● Aluminum (Conductive Polymer) electrolytic capacitors (Lead terminal type, Snap-in type)

#### (1) Soldering iron conditions

Iron tip temperature shall be  $400^{\circ}\text{C} \pm 5^{\circ}\text{C}$  within the duration of 3 seconds.

#### (2) Flow soldering conditions

The recommendation soldering conditions of the product in which flow soldering is possible are as graph.

### Caution for Using aluminum Electrolytic Capacitors

- (1) Do not dip the capacitor into melted solder.
- (2) Do not flux other part than the terminals.
- (3) If there is a direct contact between the sleeve of the capacitor and the printed circuit pattern or a metal part of another component such as a lead wire, it may cause shrinkage or crack.
- (4) If the application is for extended use, understand and manage the soldering characteristics to avoid abnormal current caused by a contact failure between the capacitor and the PCB.
- (5) Please refer to cautions for using on page 24 to 27 or 52 to 55 and product specifications about other notes.

## ■ Recommended soldering conditions

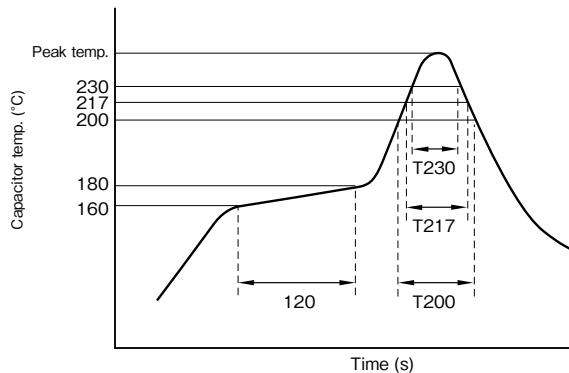

### ● Chip type aluminum (Conductive Polymer, Hybrid) electrolytic capacitors

#### (1) Soldering iron conditions

Iron tip temperature shall be  $400^{\circ}\text{C} \pm 5^{\circ}\text{C}$  within the duration of  $3^{+1}$  seconds.

#### (2) Reflow soldering conditions

Profile

1. Preheating shall be under  $180^{\circ}\text{C}$  within 120 seconds.
2. Peak temperature shall be within the following table.
3. For conditions exceeding the tolerances, consult with us.

T200 : Duration while capacitor head temperature exceeds  $200^{\circ}\text{C}$  (s)

T217 : Duration while capacitor head temperature exceeds  $217^{\circ}\text{C}$  (s)

T230 : Duration while capacitor head temperature exceeds  $230^{\circ}\text{C}$  (s)

The measurement temperature point is the case top.

### ● Chip type aluminum Conductive Polymer, Hybrid electrolytic capacitors

Series	Size	Peak temp. (5sec or less)	T230	T217	T200	Reflow cycle
HV, HVK, HVX, HT, HTK, HTX, PVG, PVX, PV3, PV2, PVM, PVK, PVS, PVH	$\phi 5$ to $\phi 6.3$	250°C Max.	40 sec. max.	50 sec. max.	60 sec. max.	2 times or less

## ■ Conductive Polymer Hybrid Aluminum Electrolytic Capacitors Cautions for Using Aluminum Electrolytic Capacitors With Conductive Polymer Solid Electrolyte

Please be sure to read this specification before using this product.

Before placing an order, please inquire about the Product Specification to check details.

### ■ Cautions for Usage

#### 1. Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors are polarized.

- Using a capacitor with reversed polarity causes abnormal current flow, resulting in a short circuit.
- Cannot use for the circuit to which the polarity reverses by ripple voltage.

#### 2. Prohibited Circuits

- Since leakage current problem may arise, capacitors cannot be used in the following circuits.
  - Coupling circuits
  - Circuits greatly affected by leakage current

#### 3. Use capacitors within the rated voltage.

- The application of voltages exceeding the rated voltage can significantly increase leakage current, resulting in a short failure. Please do not apply a voltage exceeding the rated voltage.

#### 4. Be careful of excessive rush current.

- Using capacitors in the circuit where excessive rush current passes may cause characteristic deterioration or a short. When the rush current exceeds 10 A, we recommend use of protection circuits to ensure high reliability.

#### 5. Use the allowable ripple voltage and the rated ripple current below the specified values.

- When superimposing a ripple voltage on a DC bias voltage, exercise care that the peak voltage value does not exceed the rated voltage and does not reverse the polarity.
- The rated ripple current shall be below the specified value.

#### 6. Changes in characteristics due to operating temperature

- The characteristics of conductive polymer hybrid aluminum electrolytic capacitors, solid conductive polymer aluminum electrolytic capacitors vary by temperature as follows. These variations are temporary and recover when the temperature goes back (except for the case of characteristic deterioration because of high temperatures over a long time). Note that using capacitors over the upper category temperature increases leakage current, resulting in a short and destruction.

Be careful of the capacitor temperature considering not only the ambient temperature where the equipment is placed and the temperature inside the equipment but also radiation heat from the heating element inside the equipment, and self-heat

generation by ripple current.

- ①Capacitance expressed in the value at 20°C, 120 Hz increases with increased temperature and decreases with decreasing temperature.
- ②Tangent of loss angle ( $\tan\delta$ ) expressed in the value at 20°C, 120 Hz is temperature-independent.
- ③Equivalent series resistance (ESR) expressed in the value at 20°C, 100 kHz is temperature independent.
- ④Leakage current increases with increased temperature and decreases with decreasing temperature.

#### 7. Changes in characteristics due to frequency

- The characteristics of conductive polymer hybrid aluminum electrolytic capacitors, solid conductive polymer aluminum electrolytic capacitors vary by operating frequency as follows.

- ①Capacitance expressed in the value at 20°C, 120 Hz decreases with increased frequency.
- ②Tangent of loss angle ( $\tan\delta$ ) expressed in the value at 20°C, 120 Hz increases with increased frequency.
- ③Equivalent series resistance (ESR) expressed in the value at 20°C, 100 kHz increases with decreasing frequency.

#### 8. Failure modes of solid conductive polymer aluminum electrolytic capacitors

- The failure modes of solid conductive polymer aluminum electrolytic capacitors are a wear-out failure by deterioration of electrical performance and a random failure by a short. The failure rate level is 0.5%/1,000h at the reliability level of 60% with the specified voltage applied at 105°C.
- If a short occurs and continues with the application of a voltage exceeding the rated voltage, increasing the internal temperature, the internal pressure increases by vaporization of the cathode material, which may cause the aluminum case to come off.

#### 9. Operating environments

- Do not use capacitors in an environment directly exposed to water, saltwater spray, oil spill or condensation.
- Do not use capacitors in an environment filled with toxic gas such as hydrogen sulfide, sulfuric acid, nitrous acid, chlorine, ammonia, etc.
- Do not use capacitors in a place exposed to ozone, ultraviolet rays, or radiation.

#### 10 . Fumigation Process

- Before transportation of electronic equipment to overseas, fumigation process may be subjected to wooden packing material with a halogen (compound) gas such as methyl bromide. Exercise care that this halogen gas may corrode capacitors. Also, be careful of epidemic preventive agent as corrosive component such as halogen may be contained.

## 11. The case of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors and the cathode terminal are not insulated.

- The case and the cathode terminal are not insulated as being connected through inconstant resistance.

## 12. Double-sided PCB's

- When using capacitors on a double-sided PCB, exercise care that the wiring pattern does not touch the area where the capacitors are mounted. Failure to do so may cause a short to occur to the PCB depending on the mounting conditions.

## 13. Regarding Connection of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors

- When connecting more than one capacitor in parallel, consider the current balance.

## 14. Use at a high altitude

- The use of capacitors at high altitudes such as on an airplane causes a large difference between the internal pressure of the capacitors and the atmospheric pressure. However, there is no problem in use under atmospheric pressure up to about an altitude of 10,000 meters.

If the condition is severe like space, please contact us.

## 15. Other Notes

- Do not use capacitors on a circuit where rapid charge and discharge are repeated.
- Electrical characteristics of capacitors vary by variations in temperature and frequency. Please consider these variations when designing a circuit.

### ■ Cautions for Mounting

#### 1. Cautions for Mounting

- Do not reuse capacitors that have been assembled in a set and energized. Capacitors cannot be reused except for those which have been measured on electrical performance during periodic inspection.
- Before mounting, confirm the capacitor ratings (rated capacitance and rated voltage).
- Capacitors may generate transient recovery voltage. In this case, discharge through a resistor of about 1 kΩ.

- Before mounting, confirm the polarity of capacitor.
- Do not drop capacitors onto a floor nor use them.
- Do not mount deformed capacitors.
- Do not mount heating parts around capacitors and on the back of the PCB under or back of capacitors).

#### 2. Do not apply excessive pressure to the capacitor or its terminals

- Be careful of the shock force that can be produced by absorbers, product checkers, and centering on automatic inserters and installers.

#### 3. Soldering

- Do not solder capacitor body by dipping into melted solder.
- Soldering conditions (preheating, soldering temperature, terminal dipping time) should be within the ranges specified in the catalog or the delivery specification.  
Please refer to page 15.
- Flux should not adhere to the parts other than the terminals.
- When using a soldering iron, avoid excessive stress to capacitor body.
- Although leakage current may increase (from a few  $\mu$ A to hundreds of  $\mu$ A) after soldering, it can be reduced through self-repair by applying voltage. It is advised to operate the set properly after treating with the recommended voltage.
- In case of a long-term use of equipment, control the soldering characteristics so that capacitors and PCB do not fail to connect to avoid abnormal current passage by a failure of soldering to mount.

#### 4. Handling after Soldering

- Do not tilt, fall, raise or twist capacitor body.
- Do not pick up or move PCB by holding a capacitor.
- Do not bump capacitors against objects. When stacking PCB's, make sure that capacitors do not touch the PCB's or other components.
- Do not subject capacitors to excessive stress.

#### 5. Cleaning after Soldering

- Recommended cleaning method
  - ① Cleaning solutions:
    - (a) CLEANTHROUGH 710M, 750H, 750L
    - (b) PINEALPHA ST-100S
    - (c) Techno Care FRW-4~17
    - (d) Isopropyl alcohol (2-propanol)
  - ② Cleaning conditions:
    - (a) The temperature of cleaning solution shall be less than 60°C.
    - (b) Use immersion or ultrasonic waves within two minutes.

- (c) After cleaning, capacitors and PCB's shall thoroughly be rinsed and dried with hot blast for more than 10 minutes. The temperature of such breeze should be less than the upper category temperature.
- (d) After cleaning, do not keep capacitors in cleaning solution atmosphere or airtight containers.
- During cleaning, control the cleaning solution against contamination.

## 6. Fixing adhesives and coating materials.

- Do not use halogenated fixatives and coatings.
- Before using a fixative or coating, remove flux residues and contaminants from between the PCB and the sealing section of capacitors.
- Dry the cleaning solution before using the adhesive or coating.
- Do not cover up all the sealing sections (terminal side) of capacitors with the adhesive or coating.
- Heat curing conditions of fixative and coating.

## ■Other Cautions

### 1. Do not directly touch the terminals of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors.

Failure to do so can cause electric shock or burns. Before use, allow capacitors to discharge through a  $1\text{k}\Omega$  resistor (with a sufficient margin to the heat generation capacity) as needed.

### 2. Do not short-circuit between the terminals of the Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors. Do not subject capacitors to conductive solutions such as acid and alkaline water solutions.

### 3. Periodic inspection should be performed on the capacitors for the industrial equipment application.

Check the following checkpoints.

- Visual inspection to check for significant defects.
- Electrical performance: leakage current, rated capacitance, tangent of loss angle, ESR, and items specified in the catalog or delivery specification.

### 4. Be careful of the following cases of emergency.

- In case of a short during use of capacitors in sets, producing gas, turn off the main power of the set or unplug the power cord from the outlet.
- In case of a short, producing gas, it may take a few seconds to a few minutes depending on the conditions. Therefore, ensure that the protective circuit of the power supply works during this time.
- If the gas gets in your eyes, rinse them immediately. Gargle if the gas is inhaled.

- Do not lick the electrolyte of capacitors. When the electrolyte gets on your skin, wash it off with soap immediately.

## 5. Storage Conditions.

- Do not store at high temperature and high humidity. Store at a temperature of 5 to 35°C and a relative humidity of less than 75%, keeping free from direct sunlight.
- During delivery, capacitors are stored in airtight moistureproof bags to ensure satisfactory soldering. Once the bag is opened right before mounting, it is better to use up the capacitors. If some are unavoidably left over, return them to the moistureproof bag, and seal the opening hermetically.
- Solid conductive polymer aluminum electrolytic capacitors may have increased leakage current when unused or stored for a long time after mounted on equipment. This phenomenon often occurs at high ambient temperatures; however, leakage current will decrease through voltage treatment. If leakage current still increases after a lapse of more than one year at ambient temperature (shorter time at high temperatures), treat with voltage as needed. In design of equipment, consider the effect of increase in initial current, and install protective circuits as needed.

Please check that recommended voltage treatment conditions are provided for each series.

- Do not store capacitors in an environment directly exposed to water, saltwater spray, oil spill or condensation.
- Do not store capacitors in an environment filled with toxic gas such as hydrogen sulfide, sulfuric acid, nitrous acid, chlorine, ammonia, etc.
- Do not store capacitors in a place exposed to ozone, ultraviolet rays, or radiation.

## 6. Please take the following actions when disposing of Conductive Polymer Hybrid Aluminum Electrolytic Capacitors, Solid Conductive Polymer Aluminum Electrolytic Capacitors.

- Entrust to specialists of industrial waste treatment for incineration.

## 7. Others

- Before using capacitors, check the details of this delivery specification and catalog as well as the following.

Technical Report of Japan Electronics and Information Technology Industries Association

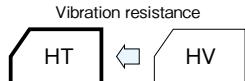

EIAJ RCR-2367B

Guideline of notabilia for fixed aluminum electrolytic capacitors for use in electronic equipment

**Conductive Polymer Hybrid Capacitors**

**GREEN CAP**   **SMD**   **Low ESR**   **105°C 10000hours**

- Low ESR and high ripple current are realized.
- HT is resist to vibration. (30G guaranteed)
- Equivalent to conductive polymer type Aluminum Electrolytic Capacitor. (There are little characteristics change by temperature and frequency)
- Guaranteed 105°C, 10000 hours.

Marking color : Blue print

**Specifications**

Item	Performance									
Category temperature range (°C)	-55~+105									
Tolerance at rated capacitance (%)	±20					(20°C, 120Hz)				
Leakage current (μA)	Less than 0.01CV or 3(μA)whichever is larger (after 2 minutes) C : Rated capacitance (μF), V : Rated voltage (V)									
Tangent of loss angle (tanδ)	Rated voltage (V)	25	35	50	63	80				
	tanδ (max.)	0.14	0.12	0.10	0.08	0.08				
						(20°C, 120Hz)				
Characteristics at high and low temperature	<table border="1"> <tr> <td>Z-25°C/Z+20°C</td><td>1.5</td></tr> <tr> <td>Z-55°C/Z+20°C</td><td>2.0</td></tr> </table>						Z-25°C/Z+20°C	1.5	Z-55°C/Z+20°C	2.0
Z-25°C/Z+20°C	1.5									
Z-55°C/Z+20°C	2.0									
Endurance (105°C) (Applied ripple current)	Test time	10000 hours								
	Leakage current	The initial specified value or less								
	Percentage of capacitance change	Within ±30% of initial value								
	Tangent of the loss angle	200% or less of the initial specified value								
	ESR change	200% or less of the initial specified value								
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment

**Conductive Polymer Hybrid Capacitors**

GREEN CAP

SMD

Low ESR

135°C 4000hours

- Low ESR and high ripple current are realized.
- HTX is resist to vibration. (30G guaranteed)
- Equivalent to conductive polymer type Aluminum Electrolytic Capacitor. (There are little characteristics change by temperature and frequency)
- Guaranteed 135°C, 4000 hours.

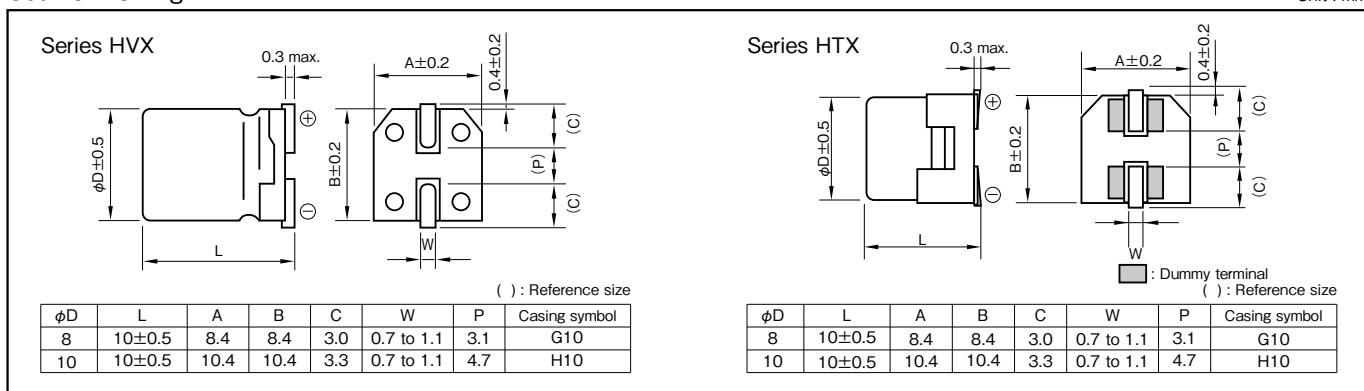

Marking color : Blue print

## ■ Cautions for Using Aluminum Electrolytic Capacitors

Please read product specifications before using ELNA products.

The following cautions should be observed when using our aluminum electrolytic capacitors to assure their maximum stability and performance. When your application design conditions or operating conditions exceed the limit of the product specification, please contact us. If used under conditions beyond the limit of our specifications, it may cause defects such as short circuit, open circuit, leakage, explosion or combustion.

### ■Cautions for usage

#### 1. DC electrolytic capacitors are polarized.

- If used with a wrong polarity, it creates an abnormal current resulting in a short circuit or damage to itself. Use DC bipolar electrolytic capacitors for use with uncertain or unknown polarity. DC capacitors cannot be used in AC circuits.

#### 2. Use within the rated voltage.

- If a voltage exceeding the rated voltage is applied, it may cause characteristic deterioration or damage due to the increased leakage current.
- When ripple current is loaded, make sure that the peak value of the ripple voltage does not exceed the rated voltage.

#### 3. Using for power supply circuit.

- While aluminum electrolytic capacitors are operated electrolyte liquid inside dries up and E.S.R. (Equivalent Series Resistance) of the capacitor increases. In case operated longer than rated life time, the capacitance much decreases, tangent of loss angle and E.S.R. much increases. Therefore for some case the sum of bias direct voltage and the peak of ripple voltage is over the rated voltage of the capacitor.
- For any type of circuit, in case the sum of bias direct voltage and the peak of ripple voltage is over the rated voltage of the capacitors or in case the minimum voltage is lower than 0 (zero) volt, the voltage control for the capacitors shall be provided.

#### 4. Do not use in a circuit which requires rapid charging or discharging.

- If used in a circuit requiring rapid charging or discharging, it may cause characteristic deterioration or damage to itself due to the heat generated inside the capacitor. In such cases, contact us for our rapid charging/discharging capacitors.

#### 5. Use within the rated ripple current.

- If applied ripple current exceeds rated ripple current, the life of the capacitor may be shortened, or in an extreme case it gets destroyed due to its internal heat. Use high-ripple type capacitors for such circuits.

#### 6. Changes in characteristics due to operating temperature.

- The characteristics of an electrolytic capacitor will change with a change in the temperature. Such changes are temporary and the original characteristics will be restored at the original temperature (if the characteristics are not deteriorated by remaining at a high temperature for a long time). If used at a

temperature exceeding the guaranteed temperature range, the capacitor may be damaged due to the increased leakage current. Pay attention to the capacitor temperature being affected by the ambient temperature of the unit, the temperature inside the appliance, the heat radiated by another hot component in the unit and the heat inside the capacitor itself due to the ripple current.

- (1)The electrostatic capacitance is normally shown as the value at 20°C-120Hz. It increases as the temperature raises and decreases as it lowers.
- (2)The tangent of loss angle ( $\tan\delta$ ) is normally shown as the value at 20°C-120Hz. It decreases as the ambient temperature gets high and increases as it gets low.
- (3)The leakage current increases as the temperature gets high and decreases as it gets low.

#### 7. Changes in the characteristics due to frequency.

- The characteristics of an electrolytic capacitor will change according to the change in the operating frequency.
  - (1)The electrostatic capacity is normally shown as the value at 20°C-120Hz. It decreases as the frequency increases.
  - (2)The tangent of loss angle ( $\tan\delta$ ) is normally shown as the value at 20°C-120Hz. It increases as the frequency gets high.
  - (3)The impedance is normally shown as the value at 100kHz 20°C. It increases as the frequency lowers.

#### 8. Aluminum electrolytic capacitor life.

- The life of an aluminum electrolytic capacitor terminates when it fails due to the deterioration in its electronic characteristics. Temperature and the ripple current since they especially affect the life. See chart on page.

#### 9. Changes in aluminum electrolytic capacitors during storage.

- After storage for a long period, whether unused or mounted on the appliance, the leakage current of an aluminum electrolytic capacitor will increase. This tendency is more prominent when the ambient temperature is high. If a capacitor has been stored for more than 2 years under normal temperature (shorter if high temperature) and it shows increased leakage current, a treatment by voltage application is recommended. Addition of a protective circuit in the design of the appliance is also recommended, considering the effect of the initial increased current.

## 10. Insulation between the capacitor case and the cathode terminal.

- The capacitor case and the cathode terminal are connected through the electrolyte which has uncertain resistance. If a complete insulation of the case is necessary, add an insulator at assembly.

## 11. NC terminal (the supplemental terminal) (series RPK, LJ6, LJ2)

- Since NC terminal is not insulated. It should be mounted at a position electronically independent from all other parts of the circuit.

## 12. External sleeve

- During a preheating or a hardening of mounting adhesive may cause a sleeve cracked.  
The capacitors are usually sleeved with poly vinyl chloride or poly ethylene terephthalate for the indication purpose only. Please do not consider it as an insulation.

## 13. Fumigation Process

- When exporting electronic equipment abroad, fumigation process may be performed on wooden packaging material with a halogen (compound) gas such as methyl bromide. Exercise care as this halogen gas may corrode capacitors. Also, use caution to epidemic preventive agent as corrosive component such as halogen may be contained.

## 14. Specific Operating Environments

- Capacitors may corrode when stored or used in a place filled with acidic toxic gases (such as hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, bromine, methyl bromide, etc.)  
If capacitors are used or stored in such environments, please let us know.

## 15. Use at a high altitude

- The use of capacitors at high altitudes such as on an airplane causes a large difference between the internal pressure of the capacitors and the atmospheric pressure. However, there is no problem in use under atmospheric pressure up to about an altitude of 10,000 meters. Please check the operation of electronic equipment at the operating environmental temperature because the temperature lowers with increased altitude.  
If the condition is severe like space, please contact us.

## 16. Hole pitch adjustment of the PCB to the capacitors.

- Set the hole pitch of the PCB to the lead pitch (the "F" distance in the catalog) of the capacitor. Be careful since a short circuit, a cut or an increase in the leakage current etc. may be caused by the stress given to the lead wire terminals due to the difference between the hole pitch and the lead pitch.

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 17. Capacitors with pressure valves.

- A part of the capacitor case is made thin to have the function as the pressure valve in order to prevent explosion due to the rise of inside pressure when a reverse or excessive voltage is applied to the capacitor. Once it has worked as a valve, the whole capacitor needs to be replaced since the valve will not restore.
- When you use a capacitor with pressure valve, provide certain space above the pressure valve as below to prevent an interference when it works as a valve.

Diameter of the capacitor (mm)	18 or less	20 to 40
Required space above the valve (mm)	2.0	3.0

## 18. Double-sided PCB's

- When you use electrolytic capacitors on a double sided PCB, be careful not to have the circuit pattern run under where the capacitor is mounted. Otherwise it may cause a short circuit on the PCB depending on the condition of mounting.

## 19. Regarding to connection of capacitors

- Aluminum electrolytic capacitor has electrolyte liquid so that the most portion of electric loss characteristics came from E.S.R(Equivalent Series Resistance) of electrolyte liquid. Therefore the capacitor is an electronic devise which can flow high ripple current in case the temperature increases and it decreases E.S.R.

In case connecting two capacitors or more, E.S.R. of the capacitors is close to the resistance of the circuit. Therefore in case current is unbalanced and some capacitors has high ripple current, temperature increase, it makes more high current and finally it is over the rated ripple current.

For parallel connection of capacitors the proper design of electric circuit such as balancing of each capacitors resistance or control of total ripple current shall be provided to avoid excess ripple current and voltage.

- When two or more capacitors are arranged in series, the voltage given to each capacitors shall be kept below the rated voltage level, by also giving consideration to the balance of the voltage impressed on the capacitors. Further, partial pressure resistor which considers leakage current shall be provided parallel to each condenser not to have over-voltage impressed on.

Balance resistance are explained on p.106 of our Catalog.

## ■Cautions for Mounting

### 1. Cautions for mounting.

- Check the ratings (electrostatic capacitance and rated voltage) of the capacitor before mounting.
- Check the polarity of the capacitor to the chassis.
- Do not drop the capacitor to the floor. Do not use

the dropped capacitor.

- Do not deform the capacitor for mounting.

## 2. Do not apply excessive pressure to the capacitor, its terminals or lead wires.

- Make sure that the contact path of the capacitor meets the hole pitch of the PCB before mounting.
- Transient recovery voltage may be generated in the capacitor due to dielectric absorption. If required, this voltage can be discharged with a resistor with a value of about 1 kΩ.
- A PCB self-standing (snap-in) type capacitor should be pushed to the end (till there is no space) to the PCB for mounting.
- Do not set the automatic insertion machine to clinch the capacitor lead wires too strong.
- Pay attention to the impact given by the component receptacles of the automatic insertion/mounting machines and the product checker, and from the centering operation.

## 3. Soldering.

- Do not dip the capacitor into melted solder.
- The soldering conditions

Chip type : Please refer to page 15.

small and large type : 260°C, 10 s (max.)

The preliminary heating and other conditions described in the catalog or product specifications.

- Do not flux other part than the terminals.
- If there is a direct contact between the sleeve of the capacitor and the printed circuit pattern or a metal part of another component such as a lead wire, it may cause shrinkage of crack.
- When you use the capacitor with its sleeve touching directly to the PCB, excessive solder temperature or excessive soldering time may cause the sleeve to shrink or crack during the heat.
- If the application is for extended use, understand and manage the soldering characteristics to avoid abnormal current caused by a contact failure between the capacitor and the PCB.

## 4. Handling after soldering.

- After soldering, do not tilt, push down or twist the capacitor.
- After soldering, do not hold the capacitor as a handle to carry the PCB.
- After soldering, do not hit the capacitor with any obstacle. If PCB's are piled up for storage, the capacitor should not touch another PCB or component.

## 5. Cleaning after Soldering

- Recommended cleaning method

(1)cleaning solutions:

- CLEANTHROUGH 710M, 750H, 750L
- PINEALPHA ST-100S
- Techno Care FRW-4~17
- Isopropyl alcohol (2-propanol)

(2)Cleaning conditions:

- The temperature of cleaning solution shall be less than 60°C.
  - Use immersion or ultrasonic waves within two minutes.
  - After cleaning, capacitors and PCB's shall thoroughly be rinsed and dried with hot blast for more than 10 minutes. The temperature of such breeze should be less than the upper category temperature.
  - After cleaning, do not keep capacitors in cleaning solution atmosphere or airtight containers.
- During cleaning, control the cleaning solution against contamination.

## 6. Fixing adhesives and coating materials.

- Do not use fixing adhesive or coating material containing halogen-based solvent.
- Before applying the fixing adhesive or the coating material, make sure that there is no remaining flux or stains between the PCB and the sealed part of the capacitor.
- Before applying the fixing adhesive or the coating material, make sure that the detergent etc. has dried up.
- Do not cover the whole surface of the sealed part (terminal side) of the capacitor with the fixing adhesive or the coating material.
- Observe the description in the catalog or the product specifications concerning the thermal stiffening conditions of the fixing adhesive or the coating material. (If there is no such description, contact us.) When both discrete and SMT components are on the same PCB, the fixing material for the SMT components may cause crack, tear or shrinkage on the external sleeve depending on the thermal stiffening condition.

### • Recommended fixing adhesives and coating materials

Fixing adhesives : Cemedine 1500, Diabond DN83K, Bond G103

Coating materials : Taffy TF1159, HumiSeal 1B66NS, 1A27NS

## ■ Other Cautions

### 1. Do not touch capacitor terminals with bare hands.

You may get electric shock or your hand may be burnt. Discharge it with a 1 KΩ resistance before use if necessary.

### 2. Do not short the capacitor terminals with a conductor.

Do not spill conductive solution including acid or alkaline solution on the capacitor.

### 3. Periodical inspections should be established for the capacitors used in industrial appliances.

- The following items should be checked:

- (1) Appearance : Check if there is any open valve or leakage.
- (2) Electronic performance : Check the leakage current, the electrostatic capacitance, the tangent of loss angle and other items described in the catalog or the product specifications.

#### 4. Take the following measures in case of emergency.

- If you see gas coming out of the capacitor valve when the set is in operation, turn off the power switch of the unit or unplug the power cord from the outlet.
- Keep your face away from the capacitor pressure valve, since the high temperature gas at over 100°C bursts out when the valve works. If the gas gets into your eyes or your mouth, wash your eyes or your mouth. Do not ingest the capacitor electrolyte. If the electrolyte gets on your skin, wash it out with soap.

#### 5. Storing conditions.

- Avoid high temperature or high humidity when storing capacitors. Keep the storing temperature at 5°C to 35°C and the relative humidity not more than 75%.
- The leakage current of an aluminum electrolytic capacitor tends to increase when stored for a long time. This tendency becomes more prominent if the ambient temperature is high. The leakage current will be decreased by voltage application. If necessary, treatment by voltage application should

be made on the capacitors which have been stored for a long period (more than 2 years after production).

- Do not store capacitors at a place where there is a possibility that they may get water, salt or oil spill.
- Do not store capacitors at a place where the air contains dense hazardous gas (hydrogen sulfide, sulfurous acid, nitrous acid, chlorine, ammonia, etc.).
- Fumigation treatment with toxic gas covering the whole wooden container frames as moth proofing during shipment may leave residual toxic gas.
- Do not store capacitors at a place where it gets ultraviolet or radioactive rays.

#### 6. Disposing of capacitors.

- Punch a hole or crush the capacitors (to prevent explosion) before incineration at approved facility.
- If they are not to be incinerated, bring them to a professional industrial waste disposal company.

#### 7. Other notes.

- Please refer to the following literature for anything not described in the product specifications or the catalog.

(Technical report of Japan Electronics and Information Technology Industries Association, EIAJ RCR-2367C "Guideline of notabilia for fixed aluminum electrolytic capacitors for use in electronic equipment")

(Note) Rated ripple current : 85°C, 120Hz ; ESR : 20°C, 120Hz

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Chip Type Bipolar Capacitors (height:5.5mm)

**GREEN CAP**   **SMD**   **Anti-cleaning solvent**

- Compatible with surface mounting for 5.5mm height capacitors.
- Supplied with carrier taping.
- Guarantees 2000 hours at 85°C.

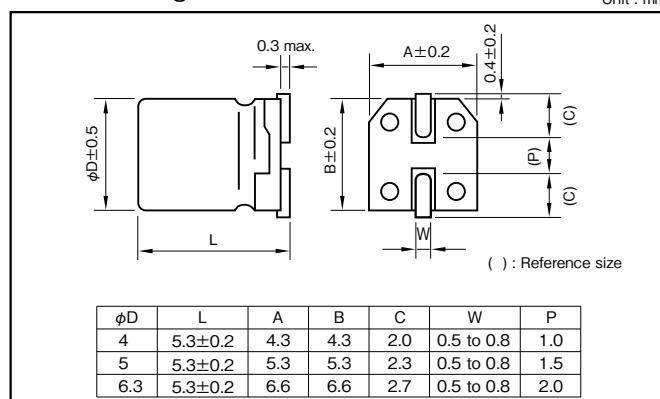

## Specifications

Item	Performance						
Category temperature range (°C)	-40 to +85						
Tolerance at rated capacitance (%)	$\pm 20$						(20°C, 120Hz)
Leakage current ( $\mu$ A)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance ( $\mu$ F) ; V : Rated voltage (V) (20°C)						
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)	6.3	10	16	25	35	50
	$\tan\delta$ (max.)	$\phi 4$	0.35	0.30	0.25	0.25	0.25
Characteristics at high and low temperature	$\phi 5, 6.3$	0.30	0.25	0.20	0.15	0.15	0.15
							(20°C, 120Hz)
Endurance (85°C) (Applied ripple current)	Rated voltage (V)	6.3	10	16	25	35	50
	Impedance ratio (max.)	Z-25°C/Z+20°C	3	3	2	2	2
Shelf life (85°C)	Z-40°C/Z+20°C	8	5	4	3	3	3
							(120Hz)
Applicable standards	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4						
	JIS C5101-1 1998, -18 1999 (IEC 60384-1 1992, -18 1993)

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Chip type, 105°C Use, Long Life, High CV Capacitors

GREEN CAP SMD 105°C 2000hours Anti-cleaning solvent

- Compatible with surface mounting.
- Supplied with carrier taping.
- Guarantees 2000 hours 105°C.

High CV

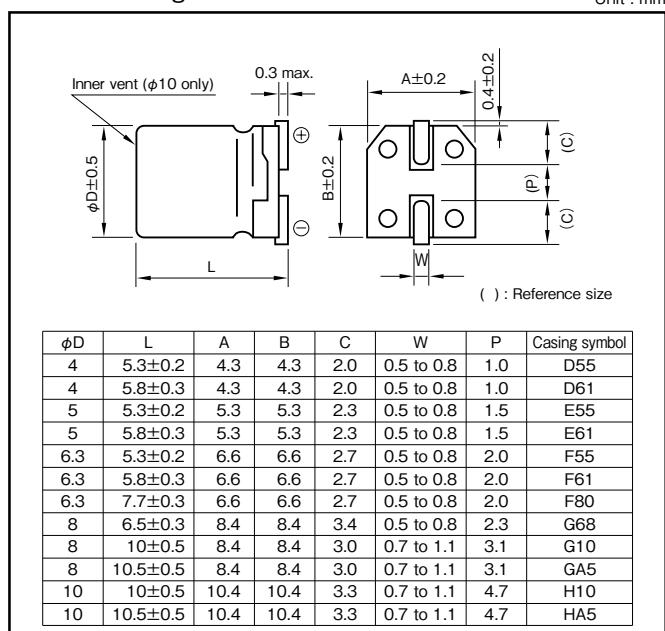

Marking color : Black print

### Specifications

Item	Performance														
Category temperature range (°C)	-40 to +105														
Tolerance at rated capacitance (%)	±20 (20°C, 120Hz)														
Leakage current (µA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF), V : Rated voltage (V) (20°C)														
Tangent of loss angle (tanδ)	Rated voltage (V)	4	6.3	10	16	25	35	50							
	tanδ (max.)	0.50	0.30	0.22	0.16	0.14	0.12	0.12							
	(20°C, 120Hz)														
Characteristics at high and low temperature	Rated voltage (V)	4	6.3	10	16	25	35	50							
	Impedance ratio (max.)	Z-25°C/Z+20°C	7	4	3	2	2	2							
		Z-40°C/Z+20°C	15	8	6	4	3	3							
	(120Hz)														
Endurance (105°C)	Test time	2000 hours													
	Leakage current	The initial specified value or less													
	Percentage of capacitance change	Within ±20% of initial value (d5 or Smaller & 16V or less: ±30%)													
	Tangent of loss angle	200% or less of the initial specified value													
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4														
Applicable standards	JIS C5101-1 1998, -18 1999(IEC 60384-1 1992, -18 1993)

ALUMINUM

CHIP ALUMINUM

105°C

## Chip Type, 105°C Use, Low Impedance, Long Life Capacitors

GREEN CAP SMD Low Z 105°C 2000hours Anti-cleaning solvent

- Compatible with surface mounting.
- Supplied with carrier taping.
- Guarantees 2000 hours at 105°C.  
(6.3 to 50V 10.0L,10.5L:5000 hours)  
( $\phi$ 12.5x13.5L: 5000 hours)

Low Z, Long life

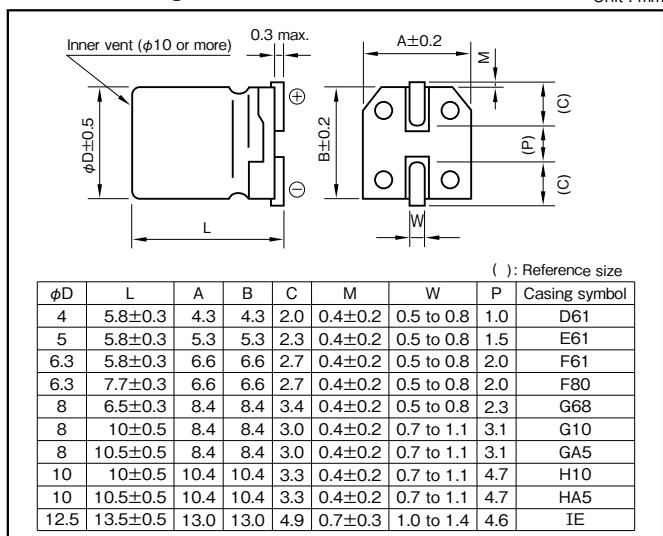

Marking color : Black print

### Specifications

Item	Performance										
Category temperature range (°C)	-55 to +105										
Tolerance at rated capacitance (%)	$\pm 20$ (20°C,120Hz)										
Leakage current ( $\mu$ A)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance ( $\mu$ F), V : Rated voltage (V) (20°C)										
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)	6.3	10	16	25	35	50	63	80	100	
	$\tan\delta$ (max.)	0.26	0.19	0.16	0.14	0.12	0.10	0.08	0.08	0.07	
	0.02 is added to every 1000 $\mu$ F increase over 1000 $\mu$ F. (20°C,120Hz)										
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50	63	80	100	
	Z=25°C/Z+20°C	2	2	2	2	2	2	2	2	2	
	Z=40°C/Z+20°C	3	3	3	3	3	3	3	3	3	
	Z=55°C/Z+20°C	8	4	4	3	3	3	3	3	3	
	(120Hz)										
Endurance (105°C)	Test time	2000 hours (6.3 to 50V 10.0L,10.5L, $\phi$ 12.5x13.5L : 5000 hours)									
	Leakage current	The initial specified value or less									
	Percentage of capacitance change	Within $\pm 30\%$ of initial value									
	Tangent of the loss angle	200% or less of the initial specified value (6.3 to 50V 10.0L,10.5L, $\phi$ 12.5x13.5L : 300% or less)									
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4										
Applicable standards	JIS C 5101-1 1998, -18 1999(IEC 60384-1 1992, -18 1993)										

### Outline Drawing

### Coefficient of Frequency for Rated Ripple Current

Frequency (Hz)	50・60	120	1k	10k・100k
Rated voltage (V)	6.3 to 100	0.50	0.50	0.75

### Part numbering system

$\phi$ 10X10.5L or less (example : 16V100 $\mu$ F)

RVD	—	16	V	101	M	F61	U	—	□				
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Taping symbol								
In the case of "for High Temperature Reflow" type, a series name is "RZB".													
$\phi$ 12.5X13.5 (example : 16V1000 $\mu$ F)													
RVD	—	16	V	102	M	I E	T	—	R5				
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Taping symbol								

If "For Vibration Resistance" type is required, please see the series RTD of page 89.

- Soldering conditions are described on page 15.
- Land pattern size are described on page 13.
- The taping spesifications are described on page 16.

## Chip Type, 125°C Use, High CV, Long Life Capacitors

GREEN CAP SMD Low ESR 125°C 2000hours Anti-cleaning solvent

- Compatible with surface mounting.
- Supplied with carrier taping.
- Guaranteed 2000 hours at 125°C.

High CV, Long Life

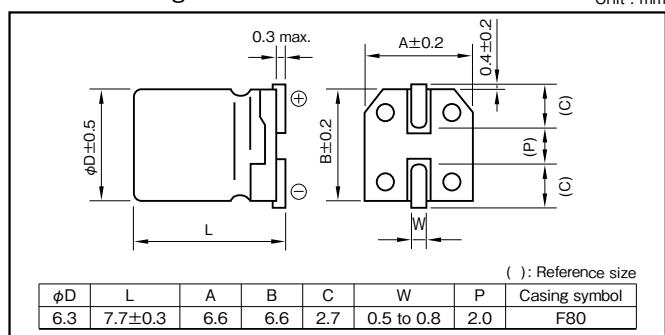

Marking color : Black print

### Specifications

Item	Performance	
Category temperature range (°C)	−40 to +125	
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)	
Leakage current ( $\mu$ A)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance ( $\mu$ F) ; V : Rated voltage (V) (20°C)	
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V) $\tan\delta$ (max.)	35 0.16 (20°C, 120Hz)
Characteristics at high and low temperature	Rated voltage (V) Impedance Ratio (max.) Z−25°C/Z+20°C Z−40°C/Z+20°C	35 2 3 (120Hz)
Endurance (125°C)	Test time Leakage current Percentage of capacitance change Tangent of the loss angle	2000 hours The initial specified value or less Within $\pm 30\%$ of initial value 300% or less of the initial specified value
Shelf life (125°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4	
Applicable standards	JIS C5101-1 1998, -18 1999 (IEC 60384-1 1992, -18 1993)

## Horizontal Type, 125°C Use, For Vibration Capacitors

SMD   Vibration Resistance   125°C 1000hours   Anti-cleaning solvent

- 125°C high temperature surface mount.
- Highly resistant to vibration.
- Available in horizontal configurations only.
- Supplied with carrier taping.
- Guarantees 1000 hours at 125°C.

Horizontal type  
Large capacitance

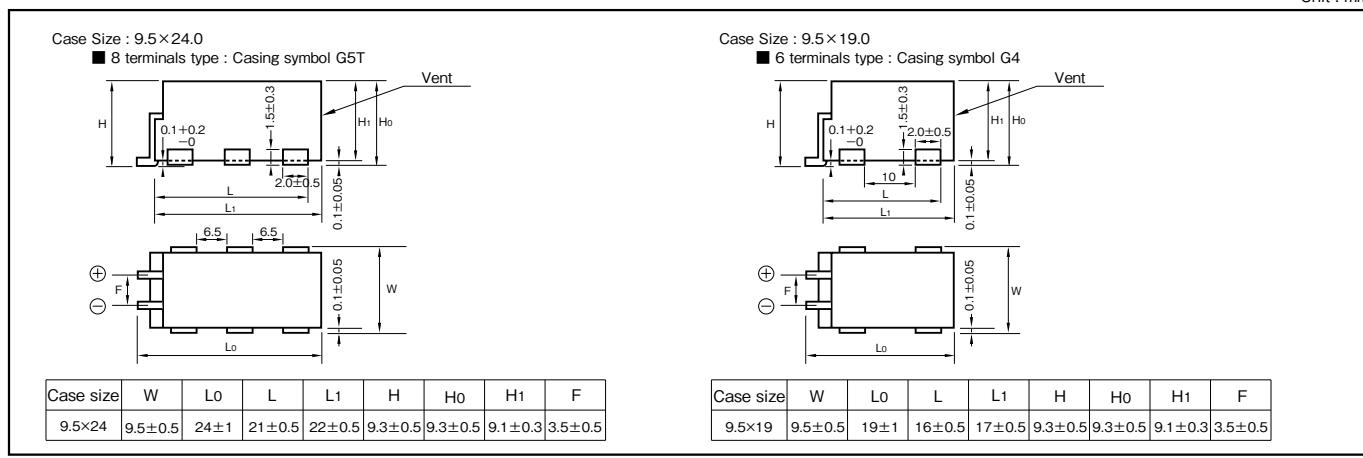

Marking color : White print on a black case

(Note) Rated ripple current : 85°C, 120Hz.

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Standard Capacitors

GREEN CAP  
Anti-cleaning solvent  
250V Max.

- Guarantees 2000 hours at 85°C.

High temperature

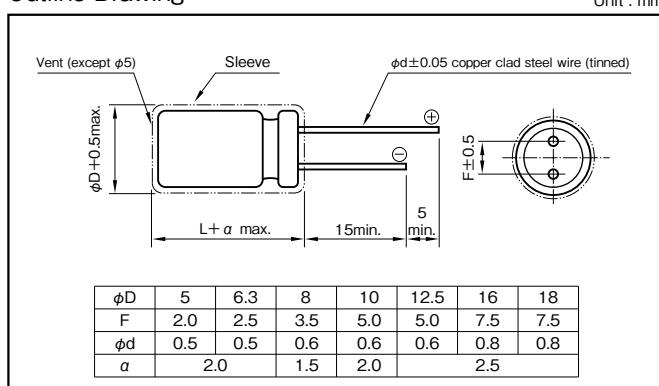

Marking color : White print on a blue sleeve

## Specifications

Item	Performance																													
Category temperature range (°C)	-40 to +85																													
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)																													
Leakage current ( $\mu$ A)	Rated voltage (V)		6.3 to 100										160 to 450																	
	Leakage current ( $\mu$ A)		Less than 0.03CV or 4 whichever is larger (after 1 minute) Less than 0.01CV or 3 whichever is larger (after 2 minutes)										CV $\leq$ 1000 : Less than 0.1CV+40 (after 1 minute) CV > 1000 : Less than 0.04CV+100 (after 1 minute)																	
	C : Rated capacitance ( $\mu$ F) V: Rated voltage (V) (20°C)																													
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)		6.3	10	16	25	35	50	63	100	160	200	250	315	350	400	450													
	$\tan\delta$ (max.)		0.28	0.24	0.20	0.16	0.14	0.12	0.10	0.08	0.20	0.20	0.20	0.24	0.24	0.24	0.24													
	0.02 is added to every 1000 $\mu$ F increase over 1000 $\mu$ F. (20°C, 120Hz)																													
Characteristics at high and low temperature	Rated voltage (V)		6.3	10	16	25	35	50	63	100	160	200	250	315	350	400	450													
	Impedance ratio (max.)	Z-25°C/Z+20°C		5	4	3	2	2	2	2	4	4	4	4	4	4	4													
		Z-40°C/Z+20°C		12	10	8	5	4	3	3	15	15	15	10	10	10	10													
	(120Hz)																													
Endurance (85°C) (Applied ripple current)	Test time				2000 hours																									
	Leakage current				The initial specified value or less																									
	Percentage of capacitance change				Within $\pm 20\%$ of initial value																									
	Tangent of the loss angle				200% or less of the initial specified value																									
Shelf life (85°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4																													
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

## Standard Bipolar Capacitors

GREEN CAP  
Anti-cleaning solvent

- Guarantees 2000 hours at 85°C.

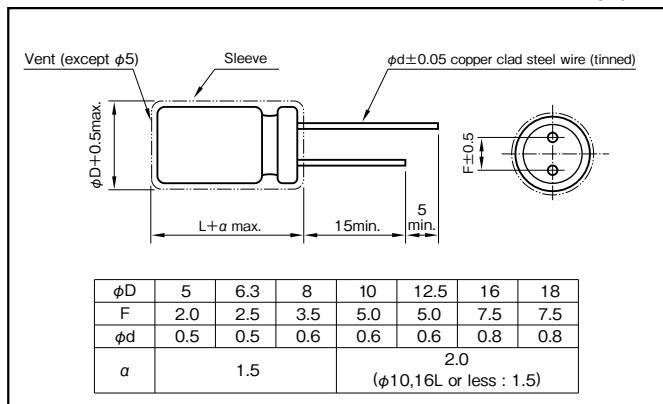

Marking color : White print on a blue sleeve

### Specifications

Item	Performance														
Category temperature range (°C)	-40 to +85														
Tolerance at rated capacitance (%)	±20 (20°C, 120Hz)														
Leakage current (μA)	Less than 0.03CV + 3 (after 5 minutes) C : Rated capacitance (μF); V : Rated voltage (V) (20°C)														
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35	50	63							
	tan δ (max.)	0.24	0.24	0.20	0.20	0.16	0.14	0.12							
	0.02 is added to every 1000μF increase over 1000μF (20°C, 120Hz)														
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50	63							
	Impedance ratio (max.)	Z-25°C/Z+20°C	4	3	2	2	2	2							
		Z-40°C/Z+20°C	10	8	6	4	3	3							
	0.5 for -25°C, 1 for -40°C are added to every 1000μF increase over 1000μF (120Hz)														
Endurance (85°C) (Applied ripple current)	Test time	2000 hours (with the polarity inverted every 250 hours)													
	Leakage current	The initial specified value or less													
	Percentage of capacitance change	Within ±20% of initial value													
	Tangent of the loss angle	150% or less of the initial specified value													
Shelf life (85°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4														
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

Item	Performance										
Category temperature range (°C)	-40 to +105										
Tolerance at rated capacitance (%)	±20 (20°C, 120Hz)										
Leakage current (μA)	Less than 0.03CV + 3 (after 5 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C)										
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35					
	tanδ (max.)	0.4	0.3	0.2	0.2	0.16					
	0.02 is added to every 1000μF increase over 1000μF (20°C, 120Hz)										
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35					
	Impedance ratio (max.)	Z-25°C/Z+20°C	5	4	3	2					
		Z-40°C/Z+20°C	10	8	6	4					
	0.5 for -25°C, 1 for -40°C are added to every 1000μF increase over 1000μF (120Hz)										
Endurance (105°C) (Applied ripple current)	Test time	2000 hours (ϕ5 to ϕ8 : 1000 hours) with the polarity inverted every 250 hours									
	Leakage current	The initial specified value or less									
	Percentage of capacitance change	Within ±20% of initial value									
	Tangent of the loss angle	200% or less of the initial specified value									
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4										
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Low Leakage Current Capacitors

GREEN  
CAP

- Low leakage current (after 1 minute) : 0.006CV or 0.5 ( $\mu\text{A}$ ).

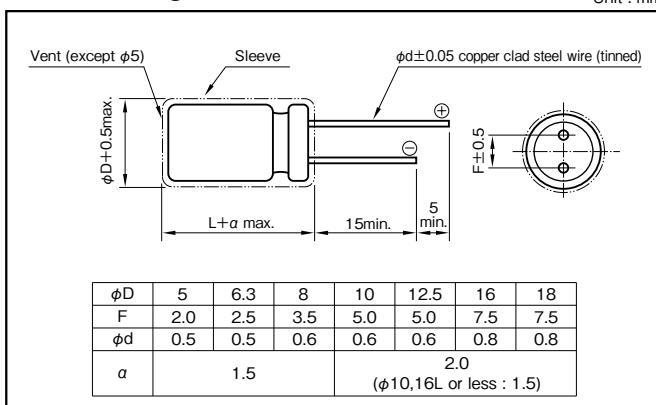

Marking color : White print on a blue sleeve

### Specifications

Item	Performance													
Category temperature range (°C)	-40 to +85													
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)													
Leakage current ( $\mu\text{A}$ )	Less than 0.006CV or 0.5 whichever is larger (after 1 minute) Less than 0.002CV or 0.3 whichever is larger (after 2 minutes), C : Rated capacitance ( $\mu\text{F}$ ) ; V : Rated voltage (V) (20°C)													
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)		6.3	10	16	25	35							
	$\tan\delta$ (max.)	More than 1 $\mu\text{F}$	0.20	0.17	0.13	0.10	0.10							
		1 $\mu\text{F}$ or less	0.06	0.06	0.06	0.06	0.06							
(20°C, 120Hz)														
Characteristics at high and low temperature	Rated voltage (V)		6.3	10	16	25	35							
	Impedance ratio (max.)	Z-25°C/Z+20°C	4	3	2	2	2							
		Z-40°C/Z+20°C	8	6	4	4	3							
(120Hz)														
Endurance (85°C) (Applied ripple current)	Test time		1000 hours											
	Leakage current		The initial specified value or less											
	Percentage of capacitance change		Within $\pm 20\%$ of initial value											
Tangent of the loss angle														
150% or less of the initial specified value														
Shelf life (85°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4													
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

## 105°C Miniature Capacitors

GREEN CAP    105°C 2000hours    Anti-cleaning solvent 250V Max.

- Case size is one rank smaller than Series RJ3.
- Guarantees 2000 hours at 105°C.  
( $\phi 5$  to  $\phi 8$  : 1000 hours)

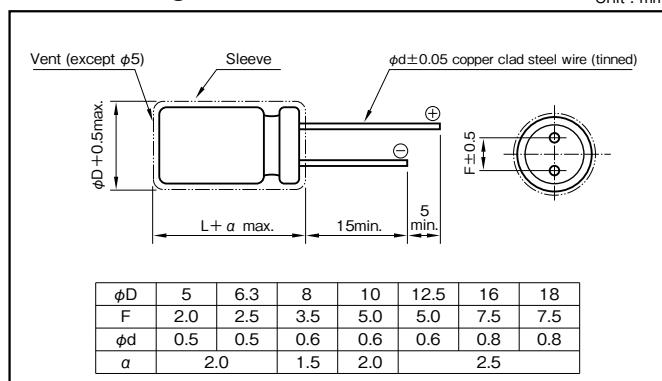

Marking color : White print on a black sleeve

## Specifications

Item	Performance																															
Category temperature range (°C)	-55 to +105																															
Rated voltage (V)	6.3 to 100																															
Tolerance at rated capacitance (%)	$\pm 20$																															
Leakage current ( $\mu$ A)	Less than 0.03CV or 4 whichever is larger (after 1 minute) Less than 0.01CV or 3 whichever is larger (after 2 minutes)																															
Tangent of loss angle ( $\tan\delta$ )	C : Rated capacitance ( $\mu$ F) ; V : Rated voltage (V)																															
	Rated voltage (V)	6.3	10	16	25	35	50	63	100	160	200	250	315	350	400	450																
	$\tan\delta$ (max.)	0.28	0.24	0.20	0.16	0.14	0.12	0.10	0.08	0.20	0.20	0.20	0.24	0.24	0.24	0.24																
	0.02 is added to every 1000 $\mu$ F increase over 1000 $\mu$ F.															(20°C, 120Hz)																
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50	63	100	160 to 250			315 to 450																			
	Impedance ratio (max.)	Z-25°C/Z+20°C	5	4	3	2	2	2	2	4			4																			
		Z-40°C/Z+20°C	10	8	6	4	3	3	3	15			10																			
	(120Hz)																															
Endurance (105°C) (Applied ripple current)	Test time				2000 hours ( $\phi 5$ to $\phi 8$ : 1000 hours)																											
	Leakage current				The initial specified value or less																											
	Percentage of capacitance change				Within $\pm 20\%$ of initial value																											
	Tangent of the loss angle				200% or less of the initial specified value																											
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4																															
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)																															

## Outline Drawing

Unit : mm

## Coefficient of Frequency for Rated Ripple Current

Rated voltage (V)	Frequency (Hz)	50 · 60	120	1k	10k	100k
		1 to 47	0.8	1	1.5	1.7
6.3 to 100	100 to 220	0.8	1	1.2	1.3	1.4
	330 to 1000	0.8	1	1.2	1.2	1.3
	2200 to 22000	0.8	1	1.1	1.1	1.1
	160 to 450	1 to 330	0.8	1	1.3	1.4

## Part numbering system (example : 16V2200μF)

## 105°C Use, Standard Capacitors

GREEN CAP    105°C  
2000hours    Anti-cleaning solvent  
250V Max.

- Guarantees 2000 hours at 105°C ( $\phi 5$  to  $\phi 8$  : 1000 hours).

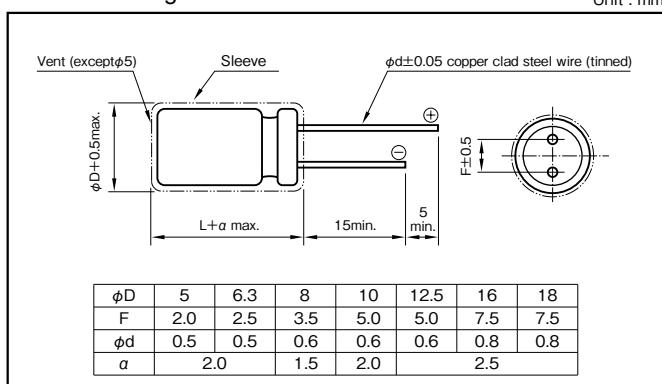

Marking color : White print on a black sleeve

## Specifications

Item	Performance																	
Category temperature range (°C)	−55 to +105										−40 to +105							
Rated voltage (V)	6.3 to 100										160 to 400							
Tolerance at rated capacitance (%)	±20 (20°C,120Hz)																	
Leakage current (μA)	Less than 0.03CV or 4 whichever is larger (after 1 minute) Less than 0.01CV or 3 whichever is larger (after 2 minutes)																	
Tangent of loss angle (tanδ)	C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C)																	
Characteristics at high and low temperature	Rated voltage (V) 6.3 10 16 25 35 50 63 100 160 200 250 315 350 400 tan δ (max.) 0.22 0.19 0.16 0.14 0.12 0.10 0.09 0.08 0.15 0.15 0.15 0.20 0.20 0.20 0.02 is added to every 1000μF increase over 1000μF. (20°C,120Hz)																	
Endurance (105°C) (Applied ripple current)	Test time 2000 hours ( $\phi 5$ to $\phi 8$ : 1000 hours) Leakage current The initial specified value or less Percentage of capacitance change Within ±20% of initial value Tangent of the loss angle 200% or less of the initial specified value																	
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4																	
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

## 105°C Use, Miniature, High-Reliability, Low Impedance Capacitors

GREEN CAP    Low Impedance    105°C 5000hours    Anti-cleaning solvent

- Smaller and higher ripple current than RJH Series.
- Guarantees 5000 hours at 105°C.  
( $\phi$  5 to 6.3 : 2000 hours ;  $\phi$  8 to 10 : 3000 hours)

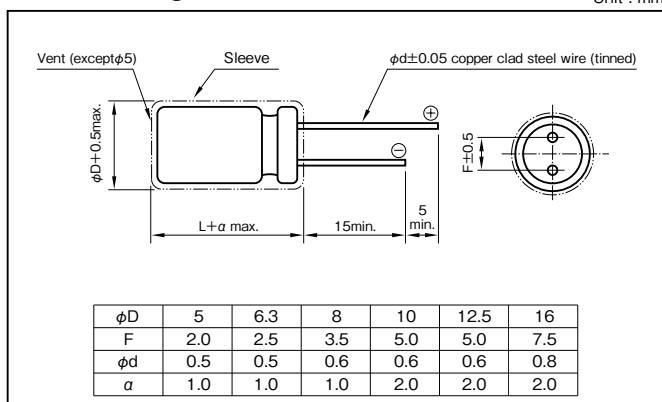

Marking color : White print on a black sleeve

### Specifications

Item	Performance							
Category temperature range (°C)	−55 to +105							
Tolerance at rated capacitance (%)	$\pm 20$ (20°C,120Hz)							
Leakage current ( $\mu$ A)	Less than $0.01CV + 1$ (after 2 minutes) C : Rated capacitance ( $\mu$ F) ; V : Rated voltage (V) (20°C)

## 105°C Use, Miniature, High-Reliability, Extra Low Impedance Capacitors

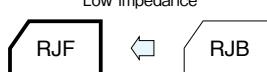

GREEN CAP

Low Impedance

105°C  
5000hours

Anti-cleaning solvent

- Higher ripple current and Lower impedance than RJB series.

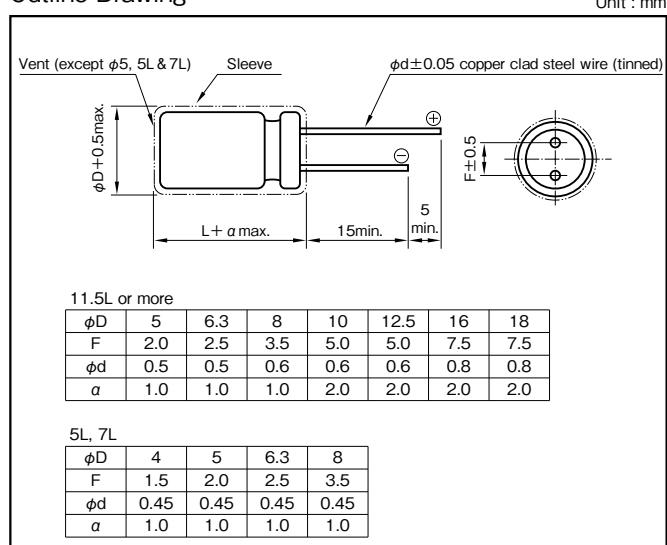

Marking color : White print on a black sleeve

## Specifications

Item	Performance									
Category temperature range (°C)	-40 to +105									
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)									
Leakage current (µA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C)									
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35	50	63	80	100
	tanδ (max.)	0.22	0.19	0.16	0.14	0.12	0.10	0.09	0.09	0.08
	0.02 is added to every 1000µF increase over 1000µF. (20°C, 120Hz)									
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50	63	80	100
	Impedance ratio (max.)	Z-25°C/Z+20°C	2	2	2	2	2	2	2	2
		Z-40°C/Z+20°C	3	3	3	3	3	3	3	3
	(120Hz)									
Endurance (105°C) (Applied ripple current)	Test time	5L & 7L : 1000 hours φ5 & φ6.3 : 2000 hours (63 to 100WV:5000 hours) φ8 & φ10 : 3000 hours (63 to 100WV:7000 hours) φ12.5 to φ18 : 5000 hours (63 to 100WV:10000 hours)								
	Leakage current	The initial specified value or less								
	Percentage of capacitance change	Within $\pm 25\%$ of initial value								
	Tangent of the loss angle	200% or less of the initial specified value								
Shelf life (105°C)	Test time	1000 hours								
	Leakage current	The initial specified value or less								
	Percentage of capacitance change	Within $\pm 25\%$ of initial value								
	Tangent of the loss angle	200% or less of the initial specified value								
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)									

## Outline Drawing

Unit : mm

## Coefficient of Frequency for Rated Ripple Current

Rated Frequency (Hz) capacitance (µF)	120	1k	10k	100k
5.6 to 180	0.40	0.75	0.90	1
220 to 390	0.50	0.85	0.94	1
470 to 1800	0.60	0.87	0.95	1
2200 to 3900	0.75	0.90	0.95	1
4700 to 6800	0.85	0.95	0.98	1

## Part numbering system (example : 10V1000µF)

RJF	—	10	V	102	M	H4	# —	□
Series code								
	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Taping(Forming) symbol			

- The standard ratings are described on the next page.

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 105°C , 100kHz ; Impedance : 100kHz

## 105°C Use, Miniature, Long Life, extra Low Impedance Capacitors

GREEN CAP  
Low Impedance  
105°C 1000hours  
Anti-cleaning solvent

- Long life than RJJ series.
- Guarantees 4000 to 10000 hours at 105°C.

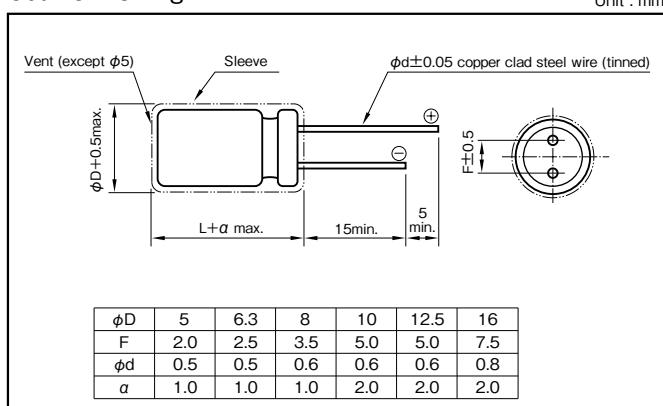

Marking color : White print on a black sleeve

### Specifications

Item	Performance								
Category temperature range (°C)	-40 to +105								
Tolerance at rated capacitance (%)	±20 (20°C,120Hz)								
Leakage current (µA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (µF), V : Rated voltage (V) (20°C)								
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35	50	63	100
	tanδ (max.)	0.22	0.19	0.16	0.14	0.12	0.10	0.09	0.08
	0.02 is added to every 1000µF increase over 1000µF. (20°C,120Hz)								
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50	63	100
	Z-25°C/Z+20°C	4	3	2	2	2	2	2	2
	Z-40°C/Z+20°C	8	6	4	3	3	3	3	3
	(120Hz)								
Endurance (105°C) (Applied ripple current)	Test time	$\phi 5 \& \phi 6.3$ : 5000 hours (6.3~10WV : 4000 hours) $\phi 8 \& \phi 10$ : 7000 hours (6.3~10WV : 6000 hours) $\phi 12.5 \& \phi 16$ : 10000 hours (6.3~10WV : 8000 hours)							
	Leakage current	The initial specified value or less							
	Percentage of capacitance change	Within ±25% of initial value							
	Tangent of the loss angle	200% or less of the initial specified value							
Shelf life (105°C)	Test time	1000 hours							
	Leakage current	The initial specified value or less							
	Percentage of capacitance change	Within ±25% of initial value							
	Tangent of the loss angle	200% or less of initial specified value							
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)								

### Outline Drawing

Unit : mm

### Coefficient of Frequency for Rated Ripple Current

Rated capacitance (µF)	Frequency (Hz)	120	1k	10k	100k
to 33	0.42	0.70	0.90	1	
47 to 270	0.50	0.73	0.92	1	
330 to 680	0.55	0.77	0.94	1	
820 to 1800	0.60	0.80	0.96	1	
2200 to 6800	0.70	0.85	0.98	1	

### Part numbering system (example : 10V1000µF)

RJL	—	10	V	102	M	H4	#	□
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Taping(Forming) symbol			

NOTE : Design, Specifications are subject to change without notice.

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 105°C Use, Miniature, Long Life, Extra Low Impedance Capacitors

GREEN CAP    Low Impedance    105°C 1000hours    Anti-cleaning solvent

- Long life than RJJ series.
- Guarantees 10000 hours at 105°C.  
( $\phi 5$  : 5000 hours,  $\phi 6.3$  : 6000 hours,  $\phi 8$  : 8000 hours)

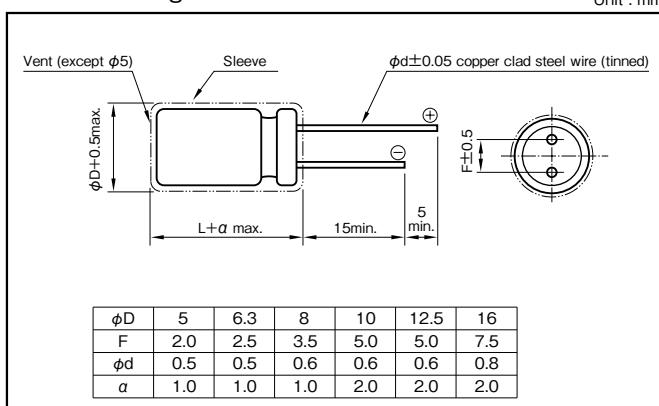

Marking color : White print on a black sleeve

### Specifications

Item	Performance						
Category temperature range (°C)	-40 to +105						
Tolerance at rated capacitance (%)	$\pm 20$ (20°C,120Hz)						
Leakage current ( $\mu A$ )	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance ( $\mu F$ ), V : Rated voltage (V) (20°C)						
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)	6.3	10	16	25	35	50
	$\tan\delta$ (max.)	0.22	0.19	0.16	0.14	0.12	0.10
	0.02 is added to every 1000 $\mu F$ increase over 1000 $\mu F$ . (20°C,120Hz)						
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50
	Z-25°C/Z+20°C	2	2	2	2	2	2
	Impedance ratio (max.)	3	3	3	3	3	3
	(120Hz)						
Endurance (105°C) (Applied ripple current)	Test time	$\phi 5$ : 5000 hours $\phi 6.3$ : 6000 hours $\phi 8$ : 8000 hours $\phi 10$ or more : 10000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within $\pm 25\%$ of initial value ( $\phi 6.3$ or less : $\pm 30\%$ )					
	Tangent of the loss angle	200% or less of the initial specified value ( $\phi 6.3$ or less : 300%)					
Shelf life (105°C)	Test time	1000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within $\pm 25\%$ of initial value ( $\phi 6.3$ or less : $\pm 30\%$ )					
	Tangent of the loss angle	200% or less of the initial specified value ( $\phi 6.3$ or less : 300%)					
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)						

### Outline Drawing

Unit : mm

### Coefficient of Frequency for Rated Ripple Current

Rated capacitance ( $\mu F$ )	120	1k	10k	100k
27 to 33	0.42	0.70	0.90	1
39 to 270	0.50	0.73	0.92	1
330 to 680	0.55	0.77	0.94	1
820 to 1800	0.60	0.80	0.96	1
2200 to 8200	0.70	0.85	0.98	1

### Part numbering system (example : 10V1000μF)

RJM	—	10	V	102	M	G4	#	—	□
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Taping(Forming) symbol

(Note) Rated ripple current :  $105^\circ\text{C}$ , 100kHz ; Impedance : 100kHz

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 105°C Use,miniature,Hi-Reliability, Low ESR Capacitors

GREEN CAP    Low ESR    105°C 8000hours    Anti-cleaning solvent

- Smaller and higher ripple current than RJB series.
- Guarantees 8000 hours at 105°C.  
( $\phi 5$  to 6.3: 2000 hours;  $\phi 8$ : 3000 hours;  $\phi 10$ : 5000 hours)

Miniaturized  
Low ESR

RJD

RJB

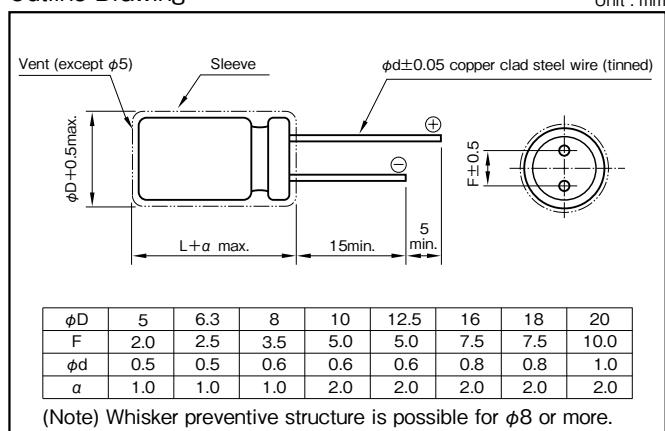

Marking color : White print on a black sleeve

### Specifications

Item	Performance																													
Category temperature range (°C)	-55 to +105																													
Tolerance at rated capacitance (%)	$\pm 20$ (20°C,120Hz)																													
Leakage current ( $\mu$ A)	Less than $0.01CV$ or 3 whichever is larger (after 2 minutes) C : Rated capacitance ( $\mu$ F), V : Rated voltage (V) (20°C)																													
Tangent of loss angle ( $\tan\delta$ )	<table border="1"> <tr> <td>Rated voltage (V)</td><td>6.3</td><td>10</td><td>16</td><td>25</td><td>35</td><td>50</td><td>63</td><td>80</td><td>100</td></tr> <tr> <td><math>\tan\delta</math> (max.)</td><td>0.22</td><td>0.19</td><td>0.16</td><td>0.14</td><td>0.12</td><td>0.10</td><td>0.10</td><td>0.08</td><td>0.08</td></tr> </table> 0.02 is added to every 1000 $\mu$ F increase over 1000 $\mu$ F. (20°C,120Hz)										Rated voltage (V)	6.3	10	16	25	35	50	63	80	100	$\tan\delta$ (max.)	0.22	0.19	0.16	0.14	0.12	0.10	0.10	0.08	0.08
Rated voltage (V)	6.3	10	16	25	35	50	63	80	100																					
$\tan\delta$ (max.)	0.22	0.19	0.16	0.14	0.12	0.10	0.10	0.08	0.08																					
Characteristics at high and low temperature	<table border="1"> <tr> <td>Rated voltage (V)</td><td>6.3</td><td>10</td><td>16</td><td>25</td><td>35</td><td>50</td><td>63</td><td>80</td><td>100</td></tr> <tr> <td>Impedance ratio (max.)</td><td>Z-55°C/Z+20°C</td><td>3</td><td>3</td><td>3</td><td>3</td><td>3</td><td>3</td><td>3</td><td>3</td></tr> </table> (120Hz)										Rated voltage (V)	6.3	10	16	25	35	50	63	80	100	Impedance ratio (max.)	Z-55°C/Z+20°C	3	3	3	3	3	3	3	3
Rated voltage (V)	6.3	10	16	25	35	50	63	80	100																					
Impedance ratio (max.)	Z-55°C/Z+20°C	3	3	3	3	3	3	3	3																					
Endurance (105°C) (Applied ripple current)	Test time			$\phi 5$ & 6.3 : 2000 hours $\phi 8$ : 3000 hours $\phi 10$ : 5000 hours $\phi 12.5$ to $\phi 20$ : 8000 hours																										
	Leakage current			The initial specified value or less																										
	Percentage of capacitance change			Within $\pm 20\%$ of initial value																										
	Tangent of the loss angle			200% or less of the initial specified value																										
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4																													
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)																													

### Outline Drawing

Unit : mm

### Coefficient of Frequency for Rated Ripple Current

Rated Capacitance ( $\mu$ F)	Frequency (Hz)	50 · 60	120	300	1k	10k · 100k
56 or less	0.20	0.30	0.50	0.80	1	
68 to 330	0.55	0.65	0.75	0.85	1	
390 to 1000	0.70	0.75	0.80	0.90	1	
1200 to 18000	0.80	0.85	0.90	0.95	1	

### Part numbering system (example : 6.3V10000 $\mu$ F)

RJD	—	6	V	103	M	J7	#	—	□
Series code		Rated voltage symbol		Rated capacitance symbol		Capacitance tolerance symbol		Casing symbol	Taping(Forming) symbol

If it is whisker preventive structure, should change "#" into "G".

NOTE : Design, Specifications are subject to change without notice.

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 105°C , 100kHz ; ESR : 100kHz

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## For SRS AirBag

**GREEN CAP**    **105°C  
5000hours**    **Anti-cleaning  
solvent**    **For AirBag**

- For SRS AirBag application
- High capacitance, low impedance, and good low temperature behavior
- Guarantees 5000 hours at 105°C.

For SAS AirBag

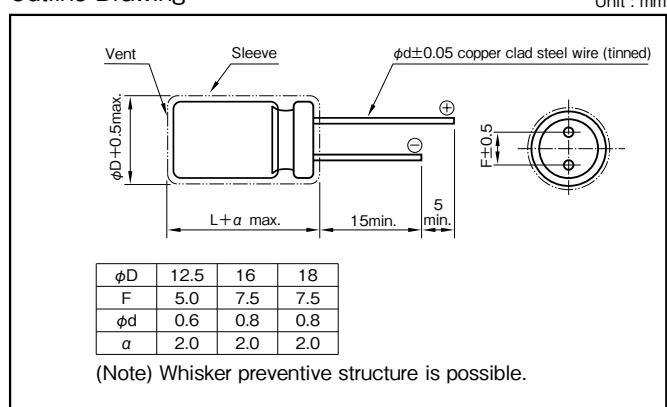

Marking color : White print on a black sleeve

## Specifications

Item	Performance		
Category temperature range (°C)	-55 to +105		
Tolerance at rated capacitance (%)	0 to +30		(20°C, 120Hz)
Leakage current (μA)	Less than 0.01CV (after 2 minutes) C : Rated capacitance (μF), V : Rated voltage (V)		(20°C)
Tangent of loss angle (tanδ)	Rated voltage (V) tanδ (max.)	25 0.20	35 0.16
	0.02 is added to every 1000μF increase over 1000μF (20°C, 120Hz)		
Characteristics at high and low temperature	Rated voltage (V) Impedance ratio (max.)	25 3	35 3
	(120Hz)		
Endurance (105°C)	Test time Leakage current Percentage of capacitance change Tangent of loss angle	5000 hours The initial specified value or less Within ±30% of initial value 300% or less of the initial specified value	
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4		
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)		

## Outline Drawing

(Note) Rated ripple current : 105°C , 120Hz ; ESR. : 20°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 105°C Use, Miniature, High-Ripple, Long Life Capacitors

GREEN CAP    105°C  
10000hours

- Higher ripple current.
- Guarantees 5000 to 10000 hours at 105°C.
- Best-suited to electronic ballast.

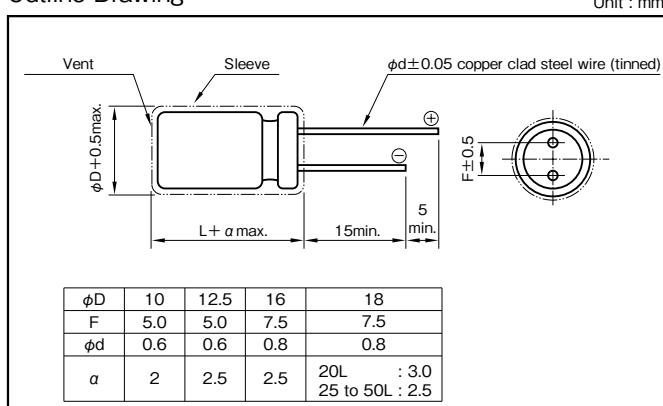

Marking color : White print on a black sleeve

### Specifications

Item	Performance		
Category temperature range (°C)	-25 to +105		
Rated Voltage (V)	160 to 450		
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)		
Leakage current ( $\mu$ A)	Less than $0.04CV + 100$ (after 1 minutes)	C : Rated capacitance ( $\mu$ F), V : Rated voltage (V)	(20°C)
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)	160 to 250	350 to 450
	Tangent of loss angle	0.10 (0.15*)	0.12 (0.20*)
* The black circles in the capacitance column correspond. (20°C, 120Hz)			
Characteristics at high and low temperature	Rated voltage (V)	160 to 250	350 to 450
	Impedance ratio Z-25°C/Z+20°C	3	6
(120Hz)			
Endurance (105°C) (Applied ripple current)	Test time	$\phi 10 \times 12.5$ : 5000 hours $\phi 10 \times 16L$ to 25L : 8000 hours $\phi 10 \times 30L$ , $\phi 12.5$ to $\phi 18$ : 10000 hours	
	Leakage current	The initial specified value or less	
	Capacitance change	Within -30% to + 30% of initial value	
	Tangent of loss angle	300% or less of the initial specified value	
Shelf life (105°C)	Test time	1000 hours	
	Leakage current	The initial specified value or less	
	Capacitance change	Within -20% to + 20% of initial value	
	Tangent of loss angle	200% or less of the initial specified value	
Voltage application treatment			
Applicable standards	JIS C 5101-01, -04 1998 (IEC 60384-1 1992, 60384-4 1985)

(Note) Rated ripple current : 105°C , 100kHz ; ESR. : 20°C , 120Hz

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 125°C Use, Miniature, Low ESR Capacitors

GREEN CAP    Low ESR    125°C 5000hours    Anti-cleaning solvent

- Smaller and low ESR than RK series.
- Guarantees 5000 hours at 125°C ( $\phi 8 : 2000h, \phi 10 : 3000h$ )

Miniaturized, Low ESR

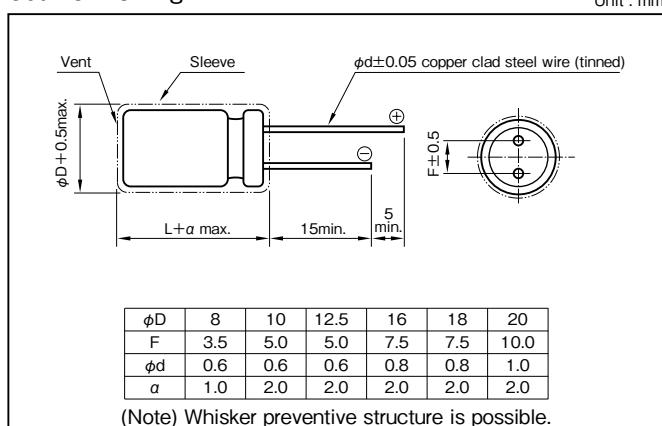

Marking color : White print on a black sleeve

### Specifications

Item	Performance														
Category temperature range (°C)	−40 to +125														
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)														
Leakage current (μA)	Less than 0.01CV or 4 whichever is larger (after 2 minutes) C : Rated capacitance (μF), V : Rated voltage (V) (20°C)														
Tangent of loss angle (tanδ)	Rated voltage (V)	10	16	25	35	50	63	80							
	tanδ (max.)	0.20	0.16	0.14	0.12	0.10	0.10	0.08							
0.02 is added to every 1000μF increase over 1000μF. (20°C, 120Hz)															
Characteristics at high and low temperature	Rated voltage (V)	10	16	25	35	50	63	80							
	Impedance ratio (max.) Z−40°C/Z+20°C	4	3	3	3	3	3	3							
(120Hz)															
Endurance (125°C) (Applied ripple current)	Test time	5000 hours ( $\phi 8 : 2000$ hours) ( $\phi 10 : 3000$ hours)													
	Leakage current	The initial specified value or less													
	Percentage of capacitance change	Within $\pm 30\%$ of initial value													
	Tangent of the loss angle	300% or less of the initial specified value													
Shelf life (125°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4														
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)														

### Outline Drawing

Unit : mm

### Coefficient of Frequency for Rated Ripple Current

Rated capacitance (μF)	Frequency (Hz)			
	50 · 60	120	1k	10k · 100k
100 to 330	0.55	0.65	0.85	1
390 to 1000	0.70	0.75	0.90	1
1200 to 8200	0.80	0.85	0.95	1

### Part numbering system (example : 10V1000μF)

RKD	—	10	V	102	M	H5	# —	□
Series code		Rated voltage symbol		Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol		Taping(Forming) symbol

If it is whisker preventive structure, should change “#” into “G”.

## 135°C Use, High CV, Low ESR Capacitors

GREEN CAP  
Low ESR  
135°C  
3000hours  
Anti-cleaning solvent

- High temperature guaranteed for automotive.
- Guaranteed 3000 hours at 135°C.  
(63V to 100V : 2000 hours)
- High CV, high ripple current.
- For ECU of Direct injection engine, ESP etc.

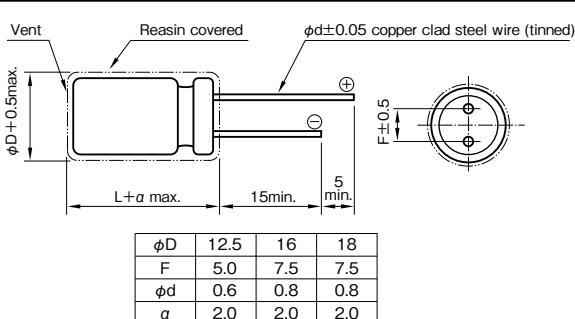

Marking color : Black print

## 150°C Miniature Capacitors

GREEN CAP Low Impedance 150°C 1000hours Anti-cleaning solvent

- 150°C, High temperature guaranteed.
- Guarantees 1000 hours at 150°C.

High temperature

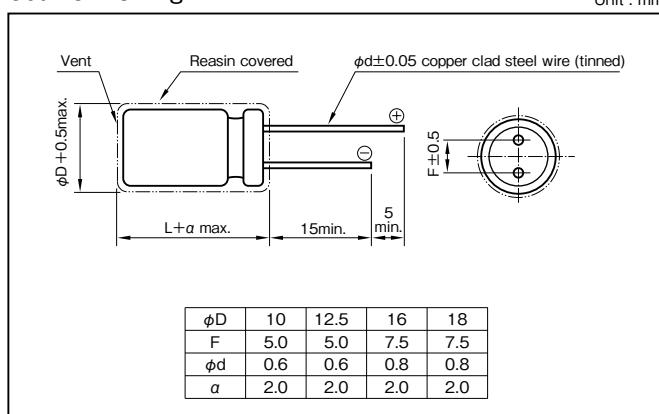

Marking color : Black print

### Specifications

Item	Performance												
Category temperature range (°C)	-40 to +150												
Tolerance at rated capacitance (%)	±20 (20°C,120Hz)												
Leakage current (μA)	Less than 0.01CV or 4 whichever is larger (after 2 minutes) C : Rated capacitance (μF), V : Rated voltage (V) (20°C)												
Tangent of loss angle (tanδ)	Rated voltage (V)	10	16	25	35	50	63						
	tanδ (max.)	0.20	0.16	0.14	0.12	0.10	0.10						
0.02 is added to every 1000μF increase over 1000μF. (20°C,120Hz)													
Characteristics at high and low temperature	Rated voltage (V)	10	16	25	35	50	63						
	Impedance ratio (max.) Z-40°C/Z+20°C	4	3	3	3	3	3						
(120Hz)													
Endurance (150°C) (Applied ripple current)	Test time	1000 hours											
	Leakage current	The initial specified value or less											
	Percentage of capacitance change	Within ±30% of initial value											
	Tangent of the loss angle	300% or less of the initial specified value											
Shelf life (150°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4												
Applicable standards	JIS C5101 - 1, - 4 1998 (IEC 60384 - 1 1992, - 4 1985)												

### Outline Drawing

Unit : mm

### Coefficient of Frequency for Rated Ripple Current

Rated capacitance (μF)	Frequency (Hz)	50 · 60	120	1k	10k · 100k
220 to 330	0.55	0.65	0.85	1	
470 to 1000	0.70	0.75	0.90	1	
1500 to 4700	0.80	0.85	0.95	1	

### Part numbering system (example : 35V1000μF)

## 125°C Use, Long Life Capacitors

GREEN CAP   Vibration Resistance   Low ESR   125°C 5000hours   Anti-cleaning solvent

- Guarantees 5000 hours at 125°C.
- Best-suited to smoothing circuits and control circuits for industrial equipment power supplies of which long life and high reliability are required.
- NC terminal added items are lineup for vibration resistance.  
(30G guaranteed : 20mmL or less)

For vibration

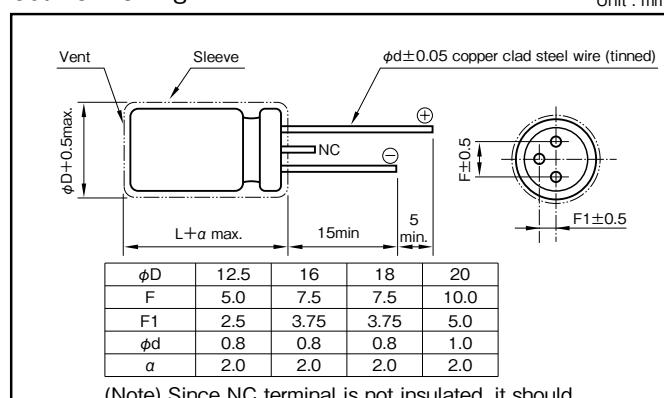

Marking color : White print on a black sleeve

## 125°C Use, Miniature, Low ESR, High Vibration Resistance Capacitors

- Vibration resistance (40G, 10 to 2000Hz, X,Y,Z = per 2hours).
- For Automotive application (ABS and electric power steering etc.)
- Guaranteed 5000 hours at 125°C

GREEN CAP    High Vibration Resistance    Low ESR    125°C 5000hours    Anti-cleaning solvent

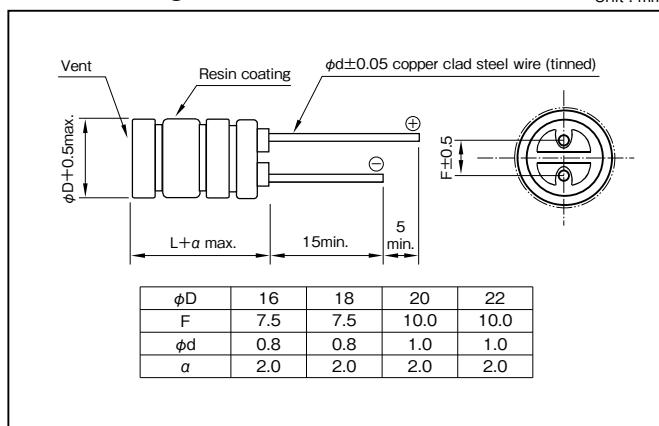

### Specifications

Item	Performance						
Category temperature range (°C)	−40 to +125						
Tolerance at rated capacitance (%)	±20 (20°C,120Hz)						
Leakage current (μA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (μF), V : Rated voltage (V) (20°C)						
Tangent of loss angle (tanδ)	Rated voltage (V)	25	35	50			
	tanδ (max.)	0.14	0.12	0.10			
0.02 is added to every 1000μF increase over 1000μF. (20°C,120Hz)							
Characteristics at high and low temperature	Rated voltage (V)	25	35	50			
	Impedance ratio (max.) Z−40°C/Z+20°C	3	3	3			
(120Hz)							
Endurance (125°C) (Applied ripple current)	Test time	5000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within ±30% of initial value					
	Tangent of the loss angle	300% or less of the initial specified value					
Shelf life (125°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4						
Vibration	Vibration test condition						
	Frequency range	10 to 2000Hz					
	Displacement amplitude	1.5 mm max.					
	Acceleration	40G (392m/s <sup>2</sup> ) max.					
	Sweep rate	0.5 octave/min.					
	Vibration axis and duration	X, Y, Z per 2 hours, total 6 hours					
	Fixation	Capacitor mounted by its body which is rigidly clamped to the work surface.					
	Specification after test						
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within ±30% of initial value					
	Tangent of the loss angle	300% or less of the initial specified value					
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

## PCB Snap-In Miniaturized Capacitors

GREEN CAP

- 20mm-tall products for every diameter of  $\phi$ 22 to  $\phi$ 35 are now offered in series.
- As many as 4 case sizes available for the same rating.

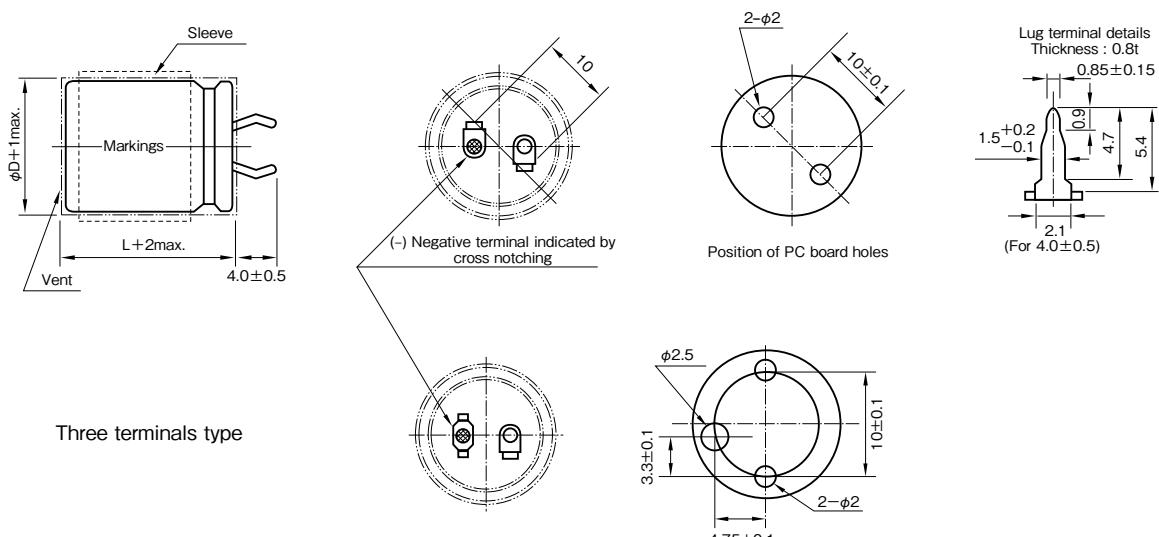

### Specifications

Item	Performance						
Category temperature range (°C)	$-40$ to $+85$ (450V is at $-25$ to $+85$ )						
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)						
Leakage current ( $\mu$ A)	Less than $3\sqrt{CV}$ (after 5 minutes) C : Rated capacitance ( $\mu$ F) ; V : Rated voltage (V) (20°C)						
	Rated voltage (V)	10	16	25	35	50	63 to 100
	$\tan\delta$ (max.)	0.80	0.60	0.50	0.40	0.30	0.20
Tangent of loss angle ( $\tan\delta$ )	tan $\delta$ (max.)	Rated voltage (V)		160 to 250	315 to 450	(20°C, 120Hz)	
	$\phi D$ (mm)	22 to 30		0.10	0.15		
		35		0.15	0.15		
Characteristics at high and low temperature	Rated voltage (V)	10	16 to 35	50 to 100	160 to 200	250 to 400	450
	Impedance ratio (max.)	Z-25°C/Z+20°C	5	4	3	4	4
		Z-40°C/Z+20°C	18	15	10	6	8
	(120Hz)						
Endurance (85°C) (Applied ripple current)	Test time	2000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within $\pm 20\%$ of initial value					
	Tangent of the loss angle	200% or less of the initial specified value					
Shelf life (85°C)	Test time	1000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within $\pm 15\%$ of initial value					
	Tangent of the loss angle	150% or less of the initial specified value					
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)						

### Outline Drawing

Unit : mm

### Part numbering system series LA5, standard terminal type : 400V330μF

LA5	400	V	331	M	S43	#	B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol		
series LT5, three terminals type : 400V330μF							
LT5	—	400	V	331	M	S43	#
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol		

### Coefficient of Frequency for Rated Ripple Current

Frequency (Hz)\ Rated voltage (V)	50	120	1k	10k	20k
100 or less	0.95	1	1.10	1.15	1.15
160 to 250	0.81	1	1.32	1.45	1.50
315 or more	0.77	1	1.30	1.41	1.43

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Miniaturized, High-Reliability, High-Ripple Capacitors

GREEN CAP 105°C  
2000hours

- High-reliability, high-ripple capacitors.
- Guarantees 2000 hours at 105°C.

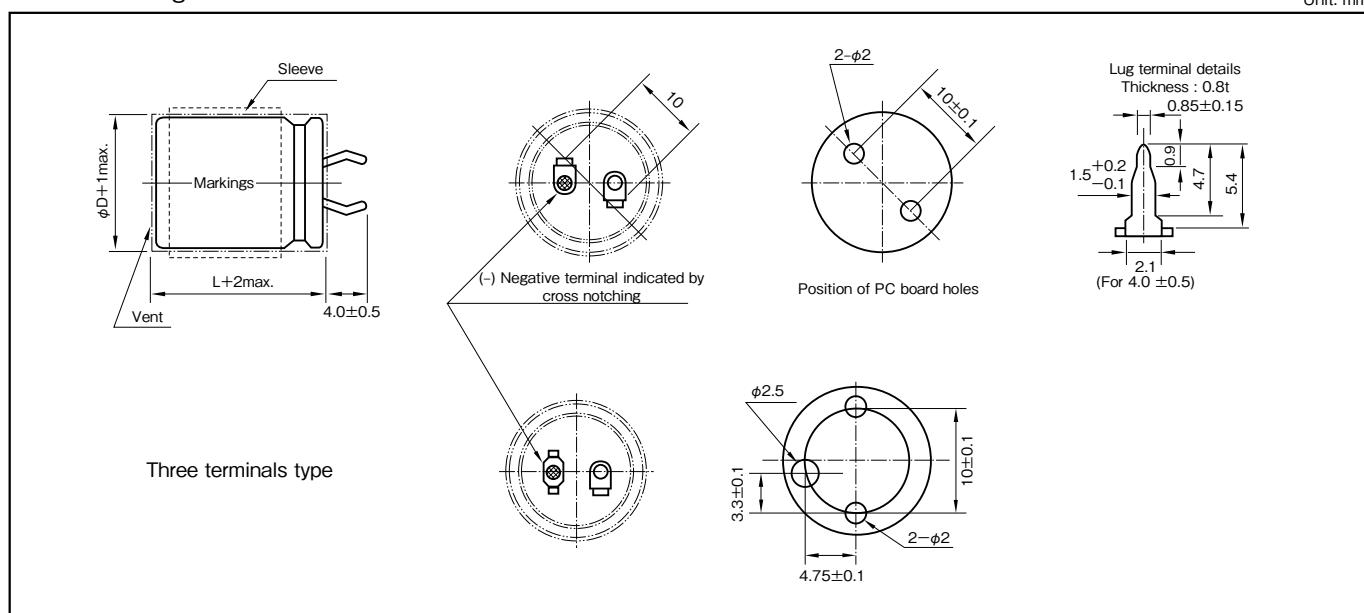

Marking color : White print on a black sleeve

## Specifications

Item	Performance								
Category temperature range (°C)	-40 to +105 (-25 to +105 at 160V or more)								
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)								
Leakage current (µA)	Less than $3/\sqrt{CV}$ (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C)								
Tangent of loss angle (tanδ)	Rated voltage (V)	16	25	35	50	63 to 100	160 to 250 400 to 450		
	tanδ (max.)	0.50	0.40	0.35	0.30	0.20	0.15 0.20		
Characteristics at high and low temperature	Rated voltage (V)	16 to 100		160 to 200		250 to 400			
	Impedance ratio (max.)	Z-25°C/Z+20°C	4	4	4	(120Hz)			
	Z-40°C/Z+20°C	15	—	—	—	(120Hz)			
Endurance (105°C) (Applied ripple current)	Test time	2000 hours							
	Leakage current	The initial specified value or less							
	Percentage of capacitance change	Within $\pm 20\%$ of initial value							
	Tangent of the loss angle	200% or less of the initial specified value							
Shelf life (105°C)	Test time	1000 hours							
	Leakage current	The initial specified value or less							
	Percentage of capacitance change	Within $\pm 15\%$ of initial value							
	Tangent of the loss angle	150% or less of the initial specified value							
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)								

## Outline Drawing

Unit: mm

## Coefficient of Frequency for Rated Ripple Current

Frequency (Hz) Rated voltage (V)	50	120	1k	10k	30k
100 or less	0.95	1	1.10	1.15	1.15
160 to 250	0.81	1	1.32	1.45	1.50
315 or more	0.77	1	1.30	1.41	1.43

Part numbering system					
series LAH, standard terminal type :400V330µF					
LAH	—	400	V	331	M S54 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol
series LTH, three terminals type :400V330µF					
LTH	—	400	V	331	M S54 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol

• The standard ratings are described on next page.

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

(Note) Rated ripple current : 105°C, 120Hz

## Ultra Miniaturized, High-Reliability, High-Ripple Capacitors

GREEN CAP  
105°C  
2000hours

- Best suited as input filters for various power supplies.
- Guarantees 2000 hours at 105°C.

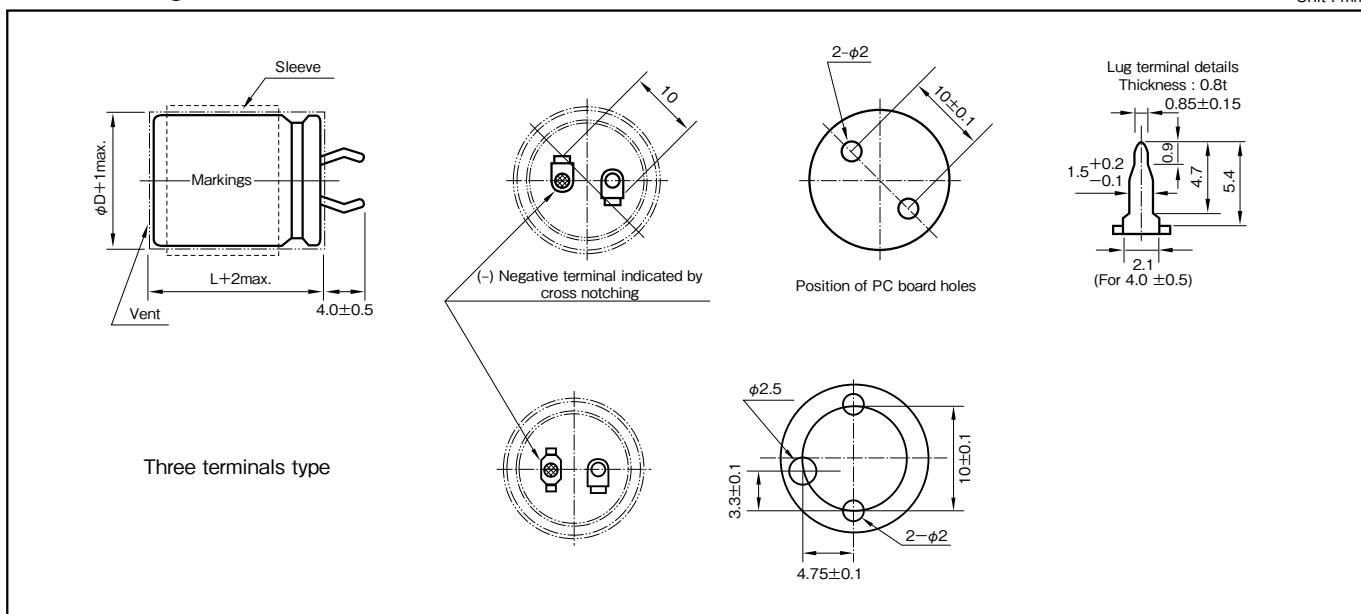

## Specifications

Item	Performance		
Category temperature range (°C)	-25 to +105		
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)		
Leakage current ( $\mu\text{A}$ )	Less than $3/\sqrt{\text{CV}}$ (after 5 minutes) C : Rated capacitance ( $\mu\text{F}$ ) ; V : Rated voltage (V) (20°C)		
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V) $\tan\delta$ (max.)	160 to 250 0.15	350 to 500 0.20
Characteristics at high and low temperature	Percentage of capacitance change (%) Impedance ratio (max.)	-25°C Z-25°C/Z+20°C	Within $\pm 30\%$ of the value at 20°C 4 (120Hz)
Endurance (105°C) (Applied ripple current)	Test time Leakage current Percentage of capacitance change Tangent of the loss angle	2000 hours The initial specified value or less Within $\pm 20\%$ of initial value 200% or less of the initial specified value	
Shelf life (105°C)	Test time Leakage current Percentage of capacitance change Tangent of the loss angle	1000 hours The initial specified value or less Within $\pm 15\%$ of initial value 150% or less of the initial specified value	
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)		

## Outline Drawing

Unit : mm

## Coefficient of Frequency for Rated Ripple Current

Frequency (Hz)	50	120	1k	10k	30k
Rated voltage (V)					
160 to 250	0.81	1	1.32	1.45	1.50

Part numbering system					
series LAT, standard terminal type :400V220μF					
LAT	—	400	V	221	M S52 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol
series LTT, three terminals type :400V220μF					
LTT	—	400	V	221	M S52 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol

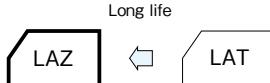

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

**High-Reliability, High-Ripple, Long Life Capacitors**
GREEN CAP 105°C  
3000hours

- High-reliability, high-ripple, long life capacitors.
- Guarantees 3000 hours at 105°C.

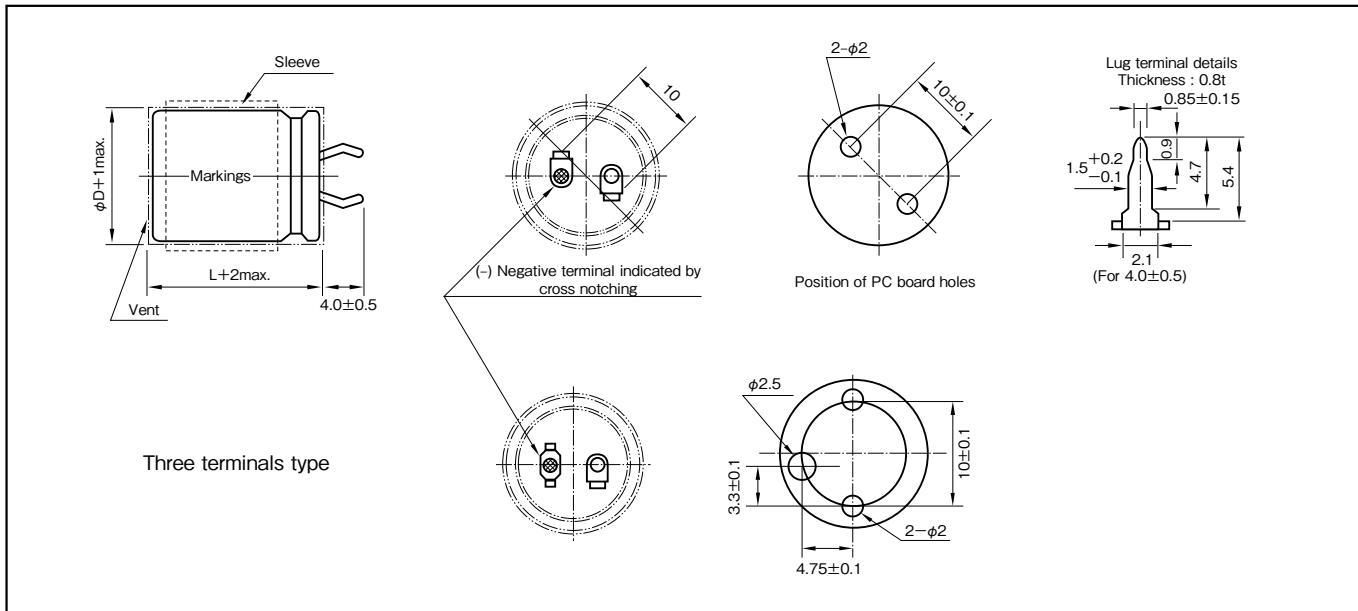

Marking color : White print on a black sleeve

**Specifications**

Item	Performance								
Category temperature range (°C)	−40 to +105 (−25 to +105 at 160V or more)								
Tolerance at rated capacitance (%)	±20 (20°C, 120Hz)								
Leakage current (µA)	Less than $3\sqrt{CV}$ (after 5 minutes) C : Rated capacitance (µF) ; V : Rated voltage (V) (20°C)								
Tangent of loss angle (tanδ)	Rated voltage (V)	16	25	35	50	63 to 100	160 to 250		
	tanδ (max.)	0.50	0.40	0.35	0.30	0.20	0.15		
		(20°C, 120Hz)							
Characteristics at high and low temperature	Rated voltage (V)	16 to 100		160 to 250		350 to 500			
	Impedance ratio (max.)	Z=25°C/Z+20°C	4	4	4	(120Hz)			
		Z=40°C/Z+20°C	15	—	—				
Endurance (105°C) (Applied ripple current)	Test time	3000 hours							
	Leakage current	The initial specified value or less							
	Percentage of capacitance change	Within ±20% of initial value							
	Tangent of the loss angle	200% or less of the initial specified value							
Shelf life (105°C)	Test time	1000 hours							
	Leakage current	The initial specified value or less							
	Percentage of capacitance change	Within ±15% of initial value							
	Tangent of the loss angle	150% or less of the initial specified value							
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)								

**Outline Drawing**

Unit: mm

Part numbering system series LAZ, standard terminal type :400V470µF					
LAZ	—	400	V	471	M S54 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol
series LTZ, three terminals type :400V470µF					
LTZ	—	400	V	471	M S54 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol

**Coefficient of Frequency for Rated Ripple Current**

Frequency (Hz)	50	120	1k	10k	30k
Rated voltage (V)					
100 or less	0.95	1	1.10	1.15	1.15
160 to 250	0.81	1	1.32	1.45	1.50
315 or more	0.77	1	1.30	1.41	1.43

## Ultra Long Life, High-Reliability Capacitors

**GREEN CAP**

**105°C  
5000hours**

- Ultra Long Life, high-reliability capacitors.
- Guarantees 5000 hours at 105°C.

Long life

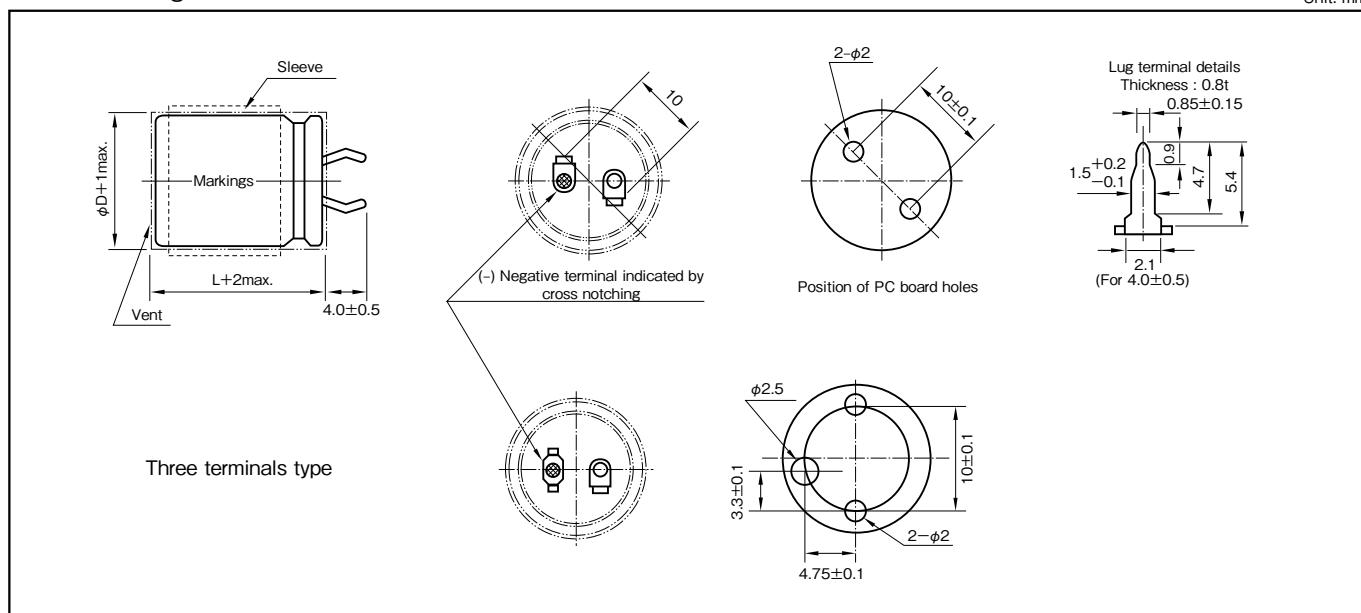

Marking color : White print on a black sleeve

### Specifications

Item	Performance		
Category temperature range (°C)	−25 to +105		
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)		
Leakage current (μA)	Less than $3\sqrt{CV}$ (after 5 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C)		
Tangent of loss angle (tanδ)	Rated voltage (V)	160 to 250	350 to 500 (20°C, 120Hz)
	tanδ (max.)	0.15	0.20
Characteristics at high and low temperature	Percentage of capacitance change (%)	−25°C	Within $\pm 30\%$ of the value at 20°C (120Hz)
	Impedance ratio (max.)	Z−25°C/Z+20°C	4
Endurance (105°C) (Applied ripple current)	Test time	5000 hours	
	Leakage current	The initial specified value or less	
	Percentage of capacitance change	Within $\pm 20\%$ of initial value	
	Tangent of the loss angle	200% or less of the initial specified value	
Shelf life (105°C)	Test time	1000 hours	
	Leakage current	The initial specified value or less	
	Percentage of capacitance change	Within $\pm 15\%$ of initial value	
	Tangent of the loss angle	150% or less of the initial specified value	
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)		

### Outline Drawing

Unit: mm

### Coefficient of Frequency for Rated Ripple Current

Frequency (Hz)	50	120	1k	10k	30k
Rated voltage (V)					
160 to 250	0.81	1	1.32	1.45	1.50
400 to 500	0.77	1	1.30	1.41	1.43

Part numbering system					
series LAX, standard terminal type :200V680μF					
LAX	—	200	V	681	M S34 # B
Series code      Rated voltage symbol      Rated capacitance symbol      Capacitance tolerance symbol      Casing symbol      Optional symbol					
series LTX, three terminals type :400V330μF					
LTX	—	400	V	331	M S53 # B
Series code	Rated voltage symbol	Rated capacitance symbol	Capacitance tolerance symbol	Casing symbol	Optional symbol

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Large-Capacitance, Long-Life, High-Reliability Capacitors

GREEN CAP  
105°C  
5000hours

- Large-capacitance, Long-life, High-reliability capacitors.
- Guarantees 5000 hours at 105°C.

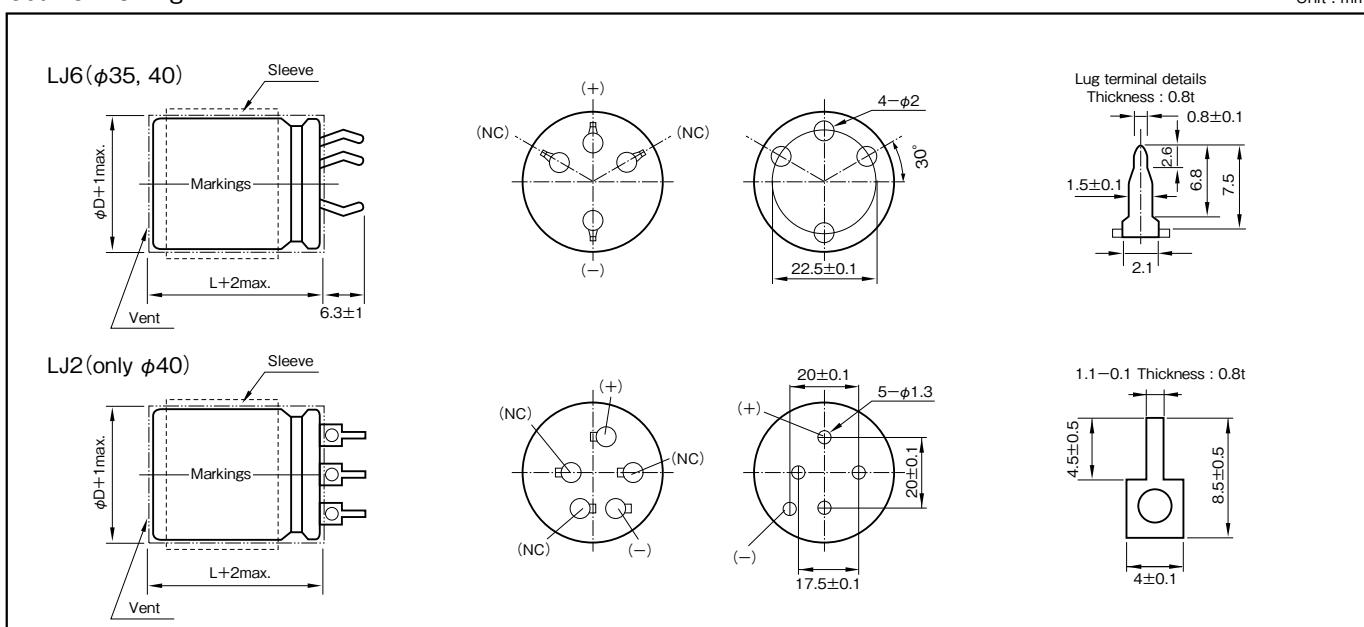

Marking color : White print on a black sleeve

### Specifications

Item	Performance		
Category temperature range (°C)	−25~+105		
Tolerance at rated capacitance (%)	±20		(20°C, 120Hz)
Leakage current (μA)	Less than 0.02CV or 5mA whichever is smaller (after 5 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V)		
Tangent of loss angle (tanδ)	Rated voltage (V) tanδ (max.)	200 to 500 0.15	(20°C, 120Hz)
Characteristics at high and low temperature	Percentage of capacitance change (%) Impedance ratio (max.)	−25°C Z−25°C/Z+20°C	Within ±30% of the value at 20°C 4
Endurance (105°C) (Applied ripple current)	Test time Leakage current Percentage of capacitance change Tangent of the loss angle	5000 hours The initial specified value or less Within ±20% of initial value 200% or less of the initial specified value	
Shelf life (105°C)	Test time Leakage current Percentage of capacitance change Tangent of the loss angle	1000 hours The initial specified value or less Within ±15% of initial value 150% or less of the initial specified value	
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)

## Screw Terminal, Miniaturized, High Ripple capacitors

GREEN CAP  
85°C  
5000hours

- Screw Terminal, Miniaturized, High Ripple capacitors.
- Guarantees 5000 hours at 85°C.

Miniaturized  
High ripple

LY6

LY5

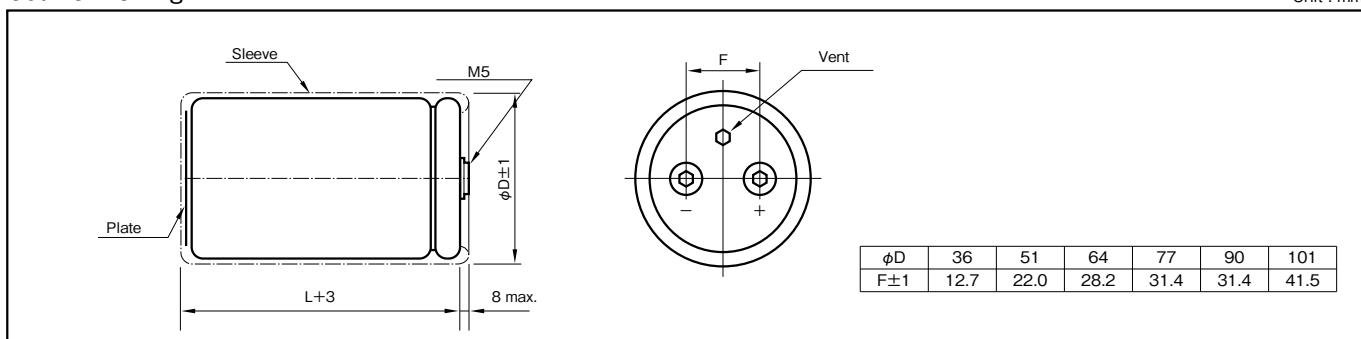

Marking color : Silver print on a black sleeve

### Specifications

Item	Performance						
Category temperature range (°C)	-25 to +85						
Tolerance at rated capacitance (%)	$\pm 20$						
Leakage current ( $\mu$ A)	Less than $0.01CV$ or 5mA whichever is smaller (after 5 minutes) C : Rated capacitance ( $\mu$ F) ; V : Rated voltage (V)						
Tangent of loss angle ( $\tan\delta$ )	Rated voltage (V)	400, 450	500, 550	600			
	$\tan\delta$ (max.)	0.15	0.20	0.25			
		(20°C, 120Hz)					
Endurance (85°C) (Applied ripple current)	Test time	5000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within $\pm 20\%$ of initial value					
	Tangent of the loss angle	200% or less of the initial specified value					
Shelf life (85°C)	Test time	1000 hours					
	Leakage current	The initial specified value or less					
	Percentage of capacitance change	Within $\pm 20\%$ of initial value					
	Tangent of the loss angle	200% or less of the initial specified value					
Voltage application treatment							
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1995)

GREEN CAP SMD For Audio

- Audio grade surface mount product with completely new components using synthetic mica paper for the separator.
- Both quality sense and sound field that could not be realized by the surface mount products are reproducible.

For higher grade

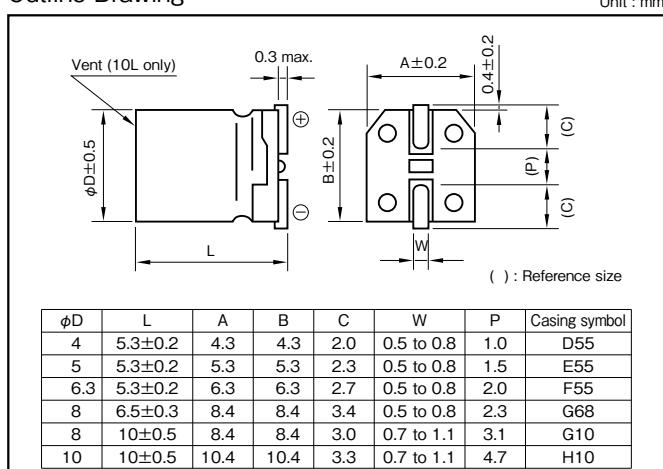

Marking color : Black print (except height : 10mm)  
White print on a brown sleeve ( $\phi 8 \times 10L, \phi 10 \times 10L$ )

## Specifications

Item	Performance							
Category temperature range (°C)	-40 to +85							
Tolerance at rated capacitance (%)	$\pm 20$							
Leakage current (μA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (μF) ; V: Rated voltage (V)							
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35	50	
	tanδ (max.)	0.28	0.24	0.20	0.14	0.12	0.10	
	(20°C, 120Hz)							
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35	50	
	Impedance ratio (max.)	Z-25°C/Z+20°C	3	3	2	2	2	
		Z-40°C/Z+20°C	8	5	4	3	3	
	(120Hz)							
Endurance (85°C) (Applied ripple current)	Test time	2000 hours						
	Leakage current	The initial specified value or less						
	Percentage of capacitance change	Within $\pm 20\%$ of initial value						
	Tangent of the loss angle	200% or less of the initial specified value						
Shelf life (85°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4							
Applicable standards	JIS C5101-1 1998, -18 1999 (IEC 60384-1 1992, -18 1993)

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Chip Type,For Audio,High Grade(SILMIC) Capacitors

- Silk fiber paper products used surface mount device.
- Completely new audio products for the high-grade paper using silk fiber paper.
- Silk "flexibility" to reduce the vibration energy of the music, in the sense of high-frequency peak, a significant decrease in roughness of the midrange and bass increase.

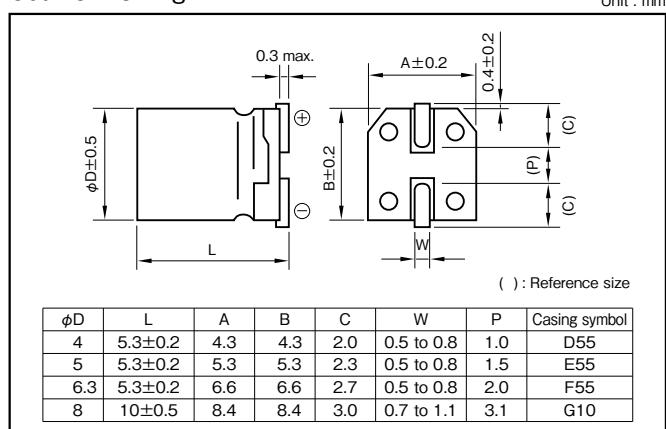

GREEN CAP SMD For Audio

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## Chip Type,For Audio,High Grade Capacitors

GREEN CAP SMD 105°C 2000hours For Audio

- New developed Al-Foil and Electrolyte for Audio grade allow lower distortion.
- New range of bright and smooth sound is achieved in SMD area.
- Guarantees 2000 hours 105°C.

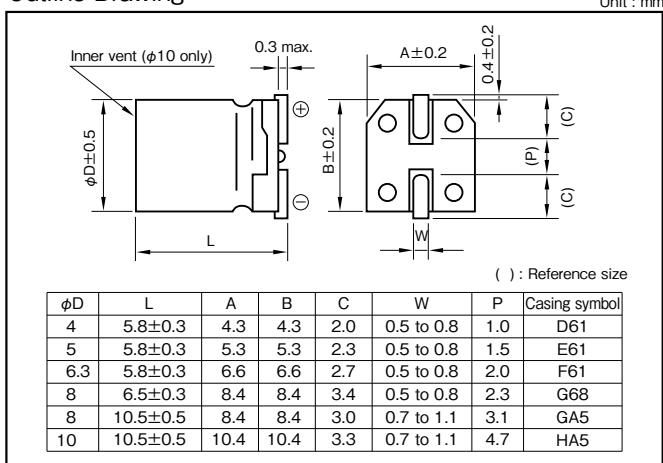

Marking color : Black print

### Specifications

Item	Performance										
Category temperature range (°C)	-55 to +105										
Tolerance at rated capacitance (%)	±20										
Leakage current (μA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (μF), V: Rated voltage (V)										
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35					
	tanδ (max.)	0.28	0.24	0.20	0.16	0.13					
		(20°C,120Hz)									
Characteristics at high and low temperature	Rated voltage (V)	6.3	10	16	25	35					
	Z-25°C/Z+20°C	2	2	2	2	2					
	Z-55°C/Z+20°C	8	4	4	3	3					
		(120Hz)									
Endurance (105°C)	Test time	2000 hours									
	Leakage current	The initial specified value or less									
	Percentage of capacitance change	Within ±30% of initial value									
	Tangent of the loss angle	300% or less of the initial specified value									
Shelf life (105°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4										
Applicable standards	JIS C5101-1 1998, -18 1999 (IEC 60384-1 1992, -18 1993)										

### Outline Drawing

## SILMIC series Silk fiber using audio purpose capacitor

- ELNA developed new raw material for the separate paper which use a silk fibers. Therefore, this capacitor can give you high grade sound for your audio design.
- Due to the silk fiber's pliability, the capacitor makes a dream of the high quality sound.

For examples ;

- To relieve the music's vibration energy.
- To decrease the peak feeling sound at high compass and rough quality sound at middle compass.
- To increase massive sound at low compass.
- For bipolar capacitors, consult with us.

Marking color : White print on a brown sleeve

## Miniature High Grade Capacitors for Audio(SILMIC II)

**GREEN CAP**      **For Audio**

- All lead wires oxygen-free copper for extremely low distortion.  
(Third high frequency distortion 10kHz, 0.1A, -120dB or less)

- "SILMIC II" mark on sleeve.

## Miniature Capacitors for Audio (PURECAP)

GREEN CAP

For Audio

Marking color : Gold print on a black sleeve

- A standard capacitor utilizing a newly developed material for a high grade of audio reproduction.
- Copper clad steel wire is used for leads.
- New type miniaturized capacitor for audio, using synthetic mica paper for the separator.

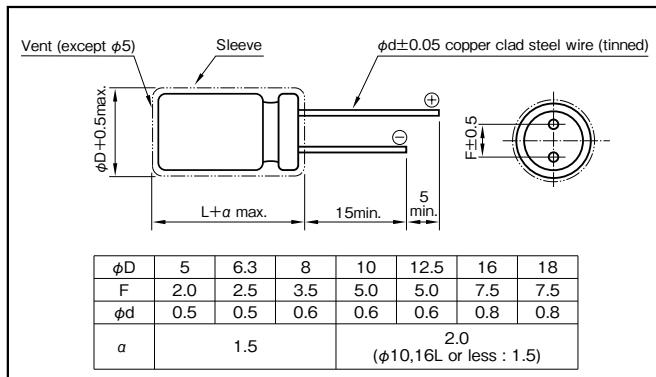

## Specifications

Item	Performance														
Category temperature range (°C)	-40 to +85														
Tolerance at rated capacitance (%)	$\pm 20$ (20°C, 120Hz)														
Leakage current (pA)	Less than 0.01CV or 3 whichever is larger (after 2 minutes) C : Rated capacitance (μF) ; V : Rated voltage (V) (20°C)														
Tangent of loss angle (tanδ)	Rated voltage (V)	6.3	10	16	25	35	50	63							
	tanδ (max.)	0.22	0.19	0.16	0.14	0.12	0.10	0.09							
	0.02 is added to every 1000μF increase over 1000μF (20°C, 120Hz)														
Endurance (85°C) (Applied ripple current)	Test time	1000 hours													
	Leakage current	The initial specified value or less													
	Percentage of capacitance change	Within $\pm 20\%$ of initial value													
	Tangent of the loss angle	150% or less of the initial specified value													
Shelf life (85°C)	Test time : 1000hours ; other items are same as the endurance. Voltage application treatment : According to JIS C5101-4														
Applicable standards	JIS C5101-1, -4 1998 (IEC 60384-1 1992, -4 1985)														

## Outline Drawing

Unit : mm

## Coefficient of Frequency for Rated Ripple Current

Rated voltage(V)	Frequency(Hz)	50 · 60	120	1k	10k	100k

It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 1 General Description of Aluminum Electrolytic Capacitors

### 1-1 The Principle of Capacitor

The principle of capacitor can be presented by the principle drawing as in Fig.1-1.

When a voltage is applied between the metal electrodes placed opposite on both surfaces of a dielectric, electric charge can be stored proportional to the voltage.

$$Q = C \cdot V$$

Q : Quantity of electricity (C)

V : Voltage (V)

C : Capacitance (F)

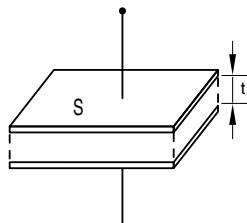

Fig.1-1

C, called the capacitance of capacitor, is expressed by the following expression with the electrode area  $S[m^2]$ , the electrode spacing  $t [m]$  and the dielectric constant of dielectric "ε":

$$C[F] = \epsilon_0 \cdot \epsilon \cdot \frac{S}{t}$$

$\epsilon_0$  : Dielectric constant in vacuum ( $= 8.85 \times 10^{-12} F/m$ )

The dielectric constant of an aluminum oxide film is 7 to 8. Larger capacitances can be obtained by enlarging the electrode area  $S$  or reducing  $t$ .

Table 1-1 shows the dielectric constants of typical dielectrics used in the capacitor. In many cases, capacitor names are determined by the dielectric material used, for example, aluminum electrolytic capacitor, tantalum capacitor, etc.

Table 1

Dielectric	Dielectric Constant	Dielectric	Dielectric Constant
Aluminum oxide film	7 to 8	Porcelain (ceramic)	10 to 120
Mylar	3.2	Polystyrene	2.5
Mica	6 to 8	Tantalum oxide film	10 to 20

Although the aluminum electrolytic capacitor is small, it has a large capacitance. It is because the electrode area is roughened by electrochemical etching, enlarging the electrode area and also because the dielectric is very thin.

The schematic cross section of the aluminum electrolytic capacitor is as in Fig.1-2.

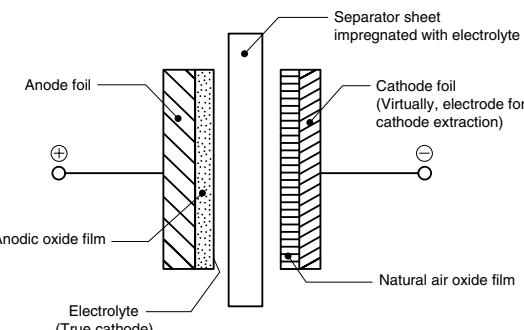

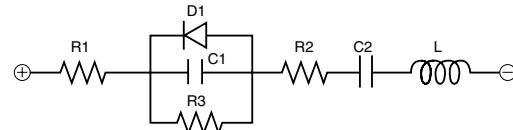

Fig.1-2

### 1-2 Equivalent Circuit of the Capacitor

The electrical equivalent circuit of the aluminum electrolytic capacitor is as presented in the following figure.

R1 : Resistance of terminal and electrode

R2 : Resistances of anodic oxide film and electrolyte

R3 : Insulation resistance because of defective anodic oxide film

D1 : Oxide semiconductor of anode foil

C1 : Capacity of anode foil

C2 : Capacity of cathode foil

L : Inductance caused by terminals, electrodes, etc.

## 2 About the Life of an Aluminum Electrolytic Capacitor

### 2-1 Estimation of life with minimal ripple current (negligible).

Generally, the life of an aluminum electrolytic capacitor is closely related with its ambient temperature and the life will be approximately the same as the one obtained by Arrhenius' equation.

$$L = L_0 \times 2^{\left( \frac{T_0 - T}{10} \right)} \quad \dots \dots \dots (1)$$

Where L : Life at temperature T

$L_0$  : Life at temperature  $T_0$

The effects to the life by derating of the applied voltage etc. are neglected because they are small compared to that by the temperature.

## 2-2 Estimation of life considering the ripple current.

The ripple current affects the life of a capacitor because the internal loss (ESR) generates heat. The generated heat will be :

$$P = I^2 R \dots\dots\dots(2)$$

Where  $I$  : Ripple current (Arms)

$R$  : ESR ( $\Omega$ )

With increase in the temperature of the capacitor:

$$\Delta T = \frac{I^2 \times R}{A \times H} \dots\dots\dots(3)$$

Where  $\Delta T$  : Temperature increase in the capacitor core(deg.)

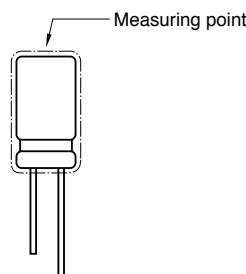

$I$  : Ripple current (Arms)

$R$  : ESR ( $\Omega$ )

$A$  : Surface area of the capacitor ( $\text{cm}^2$ )

$H$  : Radiation coefficient (Approx. 1.5 to 2.0  $\times 10^{-3} \text{W/cm}^2 \times ^\circ\text{C}$ )

The above equation (3) shows that the temperature of a capacitor increases in proportion to the square of the applied ripple current and ESR, and in inverse proportion to the surface area. Therefore, the amount of the ripple current determines the heat generation, which affects the life. The value of  $\Delta T$  varies depending on the capacitor types and operating conditions. The usage is generally desirable if  $\Delta T$  remains less than  $5^\circ\text{C}$ . The measuring point for temperature increase due to ripple current is shown below ;

Test results:

(1) The life equation considering the ambient temperature and the ripple current will be :

$$L = L_d \times 2 \left( \frac{T_0 - T}{10} \right) \times K \left( \frac{-\Delta T}{10} \right) \dots\dots\dots(4)$$

Where  $L_d$  : Life at DC operation (h)

$K$  : Ripple acceleration factor

( $K=2$ , within allowable ripple current)

( $K=4$ , if exceeding allowable ripple current)

$T_0$  : Upper category temperature ( $^\circ\text{C}$ )

$T$  : Operating temperature ( $^\circ\text{C}$ )

$\Delta T$  : Temperature increase at capacitor core (deg.)

(2) The life equation based on the life with the rated ripple current applied under the maximum guaranteed temperature will be a conversion of the above equation (4), as below :

$$L = L_r \times 2 \left( \frac{T_0 - T}{10} \right) \times K \left( \frac{\Delta T_0 - \Delta T}{10} \right) \dots\dots\dots(5)$$

Where  $L_r$  : Life at the upper category temperature with the rated ripple current (h)

$\Delta T_0$  : Temperature increase at capacitor core, at the upper category temperature ( $^\circ\text{C}$ )

(3) The life equation considering the ambient temperature and the ripple current will be a conversion of the above equation (5), as below :

$$L = L_r \times 2 \left( \frac{T_0 - T}{10} \right) \times K \left\{ 1 - \left( \frac{I}{I_0} \right)^2 \right\} \times \frac{\Delta T_0}{10} \dots\dots\dots(6)$$

Where  $I_0$  : Rated ripple current at the upper category temperature (Arms)

$I$  : Applied ripple current (Arms)

$\Delta T_0$  of each category highest temperature

Aluminum Electrolytic Capacitors	85	: 10deg
	105 to 135	: 5deg
	150	: 3deg
Polymer hybrid type aluminum Electrolytic Capacitors	105	: 15deg
	125	: 10deg
	135	: 10deg

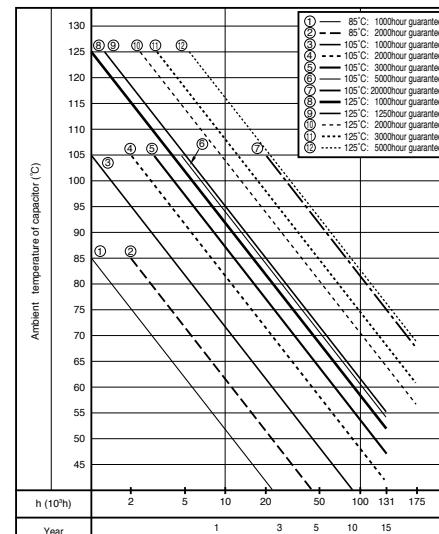

Since it is actually difficult to measure the temperature increase at the capacitor core, the following table is provided for conversion from the surface temperature increase to the core temperature increase.

Table 2-1

Case diameter	~10	12.5~16	18	22	25	30	35
Core / Surface	1.1	1.2	1.25	1.3	1.4	1.6	1.65

The life expectancy formula shall in principle be applied to the temperature range between the ambient temperature of  $+40^\circ\text{C}$  and upper category temperature. The expected life time shall be about fifteen years at maximum as a guide in terms of deterioration of the sealant.

(Fig. 2-1 Life Expectancy Chart)

## 2-3 Practical Examples of Life Expectancy

As practical examples of life expectancy, we introduce 250V 560  $\mu$ F in the LAT Series considering the effect of high-frequency component. Figures 2-2 to 2-4 show the simulated ripple current waveforms when the high-frequency component for switching is superimposed on the commercial frequency component.

Fig.2-2 Ripple Current Waveform of Capacitor

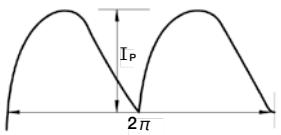

Fig.2-3 Low-frequency component

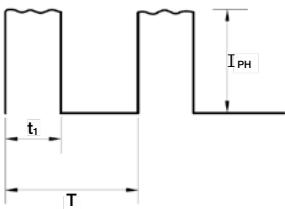

Fig.2-4 High-frequency component

Each of the above may be obtained as the effective ripple current value. Assuming that the ripple current waveform of the low-frequency component is generally approximated to the full-wave rectification waveform as shown in Fig.2-3, we obtain the effective ripple current value  $I_L$  as follows:

$$I_L = \frac{I_{PL}}{\sqrt{2}} = 0.707 \times I_{PL}$$

Since the ripple current waveform of the high-frequency component is approximated to the rectangular as shown in Fig.2-4, the effective current value of high-frequency component  $I_H$  is given by

$$I_H = \sqrt{\frac{1}{T} \int_0^{t_1} I_{PH}^2 dt_1} = I_{PH} \sqrt{\frac{t_1}{T}}$$

The reason why the ripple current affects the life is due to the heat generated by the ESR ( $R$ ) of capacitor. That is,  $\Delta T$  by heat generation can be expressed by

$$\Delta T \propto I^2 \times R \text{ from Expression (2).}$$

Therefore, when ripple currents with different frequencies are handled, each current value must first be squared and then summed. That is:

$$I = \sqrt{(I_L)^2 + (I_H)^2}$$

Now, we proceed to specific examples assuming that the effective ripple current values of low-and high-frequencies have been obtained by the above methods.

### Data A (Test piece and basic data)

Product name : 250V 560  $\mu$ F  $\phi$  30x30 L, Series LAT

$L_r$  = 2000 hours

$K$  = 4

$T_0$  = 105°C

$\Delta T_0$  = 5deg

$I_0$  = 1.80Arms at 105°C, 120Hz

### Data B

$I_L = 2.4$ Arms at 120Hz,  $T=45^\circ\text{C}$

$I_{H1} = 0.36$ Arms at 1kHz (corresponding to 15% of the commercial frequency component)

$I_{H2} = 0.72$ Arms at 10kHz (corresponding to 30% of the commercial frequency component)

$I_{H3} = 1.2$ Arms at 30kHz (corresponding to 50% of the commercial frequency component)

For Data B, the currents are converted to 120Hz by the frequency conversion factor for the cases of ignorance of the high-frequency component, and each high-frequency component condition.

$$I = 2.4/1 = 2.4\text{A}$$

$$I_1 = \sqrt{(2.4)^2 + (0.36/1.32)^2} \approx 2.42\text{A}$$

$$I_2 = \sqrt{(2.4)^2 + (0.72/1.45)^2} \approx 2.45\text{A}$$

$$I_3 = \sqrt{(2.4)^2 + (1.2/1.50)^2} \approx 2.53\text{A}$$

Explained here is about the frequency conversion factor. As described above, the heat generation (or temperature rise =  $\Delta T$ ) affecting the life is proportional to the ESR of capacitor. In addition, the fundamental frequency is 120Hz in measurement of capacitor characteristics, and the ripple current is also specified with this frequency; it is thus more convenient to calculate by converting the current value to that with the same temperature rise at 120Hz.

The ESR of aluminum electrolytic capacitor is frequency dependent.

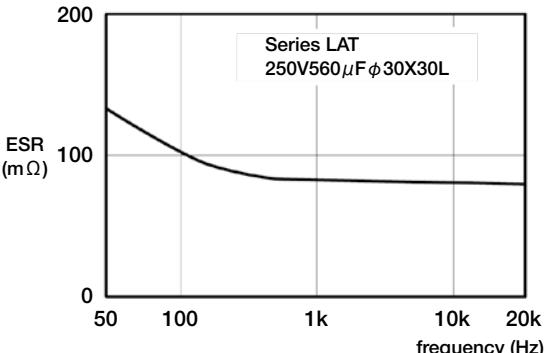

Fig.2-5 Frequency Characteristics of ESR

Figure 2-5 shows a typical example of frequency characteristics of ESR, indicating that the ESR decreases with increasing frequencies. Therefore, the high-frequency component has less effect on the heat generation of capacitor than low-frequency component.

Next, we calculate the expected life according to each condition to compare with the case with no high-frequency component.

For the case with no high-frequency component:

$$L = 2000 \times 2 \left( \frac{105-45}{10} \right) \times 4 \left[ 1 - \left( \frac{2.4}{1.80} \right)^2 \right] \times \frac{5}{10} \approx 74,658 \text{ hours}$$

For the case with high-frequency component:

$$L = 2000 \times 2 \left( \frac{105-45}{10} \right) \times 4 \left[ 1 - \left( \frac{2.42}{1.80} \right)^2 \right] \times \frac{5}{10} \approx 73,479 \text{ hours}$$

$$73,479/74,658=0.984, \text{ about a 1.6\% reduction in life}$$

$$L = 2000 \times 2 \left( \frac{105-45}{10} \right) \times 4 \left[ 1 - \left( \frac{2.48}{1.80} \right)^2 \right] \times \frac{5}{10} \approx 70,822 \text{ hours}$$

$$70,822/74,658=0.949, \text{ about a 5.1\% reduction in life}$$

$$L = 2000 \times 2 \left( \frac{105-45}{10} \right) \times 4 \left[ 1 - \left( \frac{2.61}{1.80} \right)^2 \right] \times \frac{5}{10} \approx 65,105 \text{ hours}$$

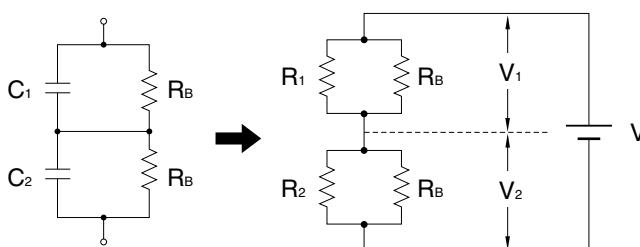

$$65,105/74,658=0.872, \text{ about a 12.8\% reduction in life}$$

As described above, there may be cases where the effect of larger high-frequency component on the life cannot be ignored; thus high-frequency component exceeding 30% with respect to the current with fundamental frequency should be considered.

### 3 To calculate Balance when connecting in series

#### 3-1 Circuit layout

Circuit for connecting two capacitors ( $C_1$ ,  $C_2$ ) in series and equivalent circuit can be illustrated as below figure. Formula to calculate a balance resistance  $R_B$  of below figure is shown as follows.

Following are the preconditions of the circuit.

- ①  $V_2$  shall be the rated voltage ( $=V_0$ ). ( $V_1 < V_2$ )
- ②  $V$  shall be  $a$  times  $V_0 \times 2$ .  $V = 2aV_0$  ( $a < 1$ )
- ③  $R_2$  shall equal  $R_1 \times b$ . ( $b < 1$ ) (1)

#### 3-2 Formulas to calculate [ $R_B$ ]

3-2-1 Following formula can be established from balanced condition.

$$V_1 \left[ \frac{1}{R_1} + \frac{1}{R_B} \right] = V_2 \left[ \frac{1}{R_2} + \frac{1}{R_B} \right] \quad (2)$$

3-2-2 Following formula can be established from preconditions.

$$V_2 \leq V_0 \quad (3)$$

$$V_1 = V - V_2 \quad (4)$$

$$= 2aV_0 - V_2 \quad (4')$$

3-2-3 Put formulas (1), (3) and (4') in formula (2).

$$\begin{aligned} (2aV_0 - V_2) \left[ \frac{R_1 + R_B}{R_1 \times R_B} \right] &= V_2 \left[ \frac{bR_1 + R_B}{bR_1 \times R_B} \right] \\ 2abV_0(R_1 + R_B) &= V_2 \{b(R_1 + R_B) + bR_1 + R_B\} \\ 2ab(R_1 + R_B) &\leq 2bR_1 + (1+b)R_B \end{aligned}$$

Accordingly, balance resistance  $R_B$  shall be the following formula.

$$R_B \leq 2bR_1 \frac{(1-a)}{(2a-1) \times b - 1} \quad (5)$$

#### 3-3 Calculation Example

Calculate the value of the balance resistance in the case of connecting two 400V 470μF (LC standard value : 1.88mA) capacitors in series.

$$R_1 = \frac{400(V)}{1.88(mA)} = 213(k\Omega)$$

If  $a=0.8$ ,  $400(V) \times 2 \times 0.8 = 640(V)$  as an impressed voltage.

If  $b=2$ ,  $R_2=b R_1=426(k\Omega)$ ,  $LC=0.94(mA)$ .

Balance resistance  $R_B$  will be.

$$R_B \leq 2 \times 2 \times 213(k\Omega) \frac{(1-0.8)}{(2 \times 0.8) \times 2 - 1} = 852(k\Omega)$$

### 4 Regarding Recovery Voltage

• After charging and then discharging the aluminum electrolytic capacitor, and further causing short-circuit to the terminals and leave them alone, the voltage between the two terminals will rise again after some interval. Voltage caused in such case is called recovery voltage. Following is the process that causes this phenomenon :

• When the voltage is impressed on a dielectric, electrical transformation will be caused inside the dielectric due to dielectric action, and electrification will occur in positive-negative opposite to the voltage impressed on the surface of the dielectric. This phenomenon is called polarization action.

• After the voltage is impressed with this polarization action, and if the terminals are discharged till the terminal voltage reaches 0 and are left open for a while, an electric potential will arise between the two terminals and thus causes recovery voltage.

• Recovery voltage comes to a peak around 10 to 20 days after the two terminals are left open, and then gradually declines. Recovery voltage has a tendency to become bigger as the component (stand-alone base type) becomes bigger.

• If the two terminals are short-circuited after the recovery voltage is generated, a spark may scare the workers working in the assembly line, and may put low-voltage driven components (CPU, memory, etc.) in danger of being destroyed. Measures to prevent this is to discharge the accumulated electric charge with resistor of about 100 to  $1k\Omega$  before using, or ship out by making the terminals in short-circuit condition by covering them with an aluminum foil at the production stage. Please consult us for adequate procedures.

## 5 Electrode Foil Development Technology

### 5-1 Corrosion inhibition of cathode foil

Inactive treatment is implemented to ensure long life by inhibiting natural corrosion of the cathode foil. Fig. 3-1 shows its effects with values of the polarization resistance inversely proportional to the corrosion rate using the AC impedance method (FRA). This indicates that the cathode foil used in the High reliability capacitors has the polarization resistance higher than that of the conventional capacitors owing to corrosion inhibition.

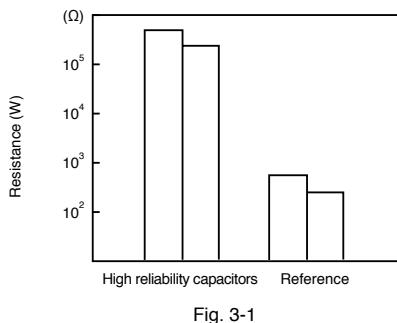

Fig. 3-1

### 5-2 Sealing material permeability of electrolyte

To ensure long life, a low permeable lactone solvent for the sealing material is used as the main solvent of the electrolyte of the High reliability capacitor. Fig. 3-2 shows the test results on the permeability obtained by changing the weight of the capacitors produced with different types of electrolytes at a high temperature.

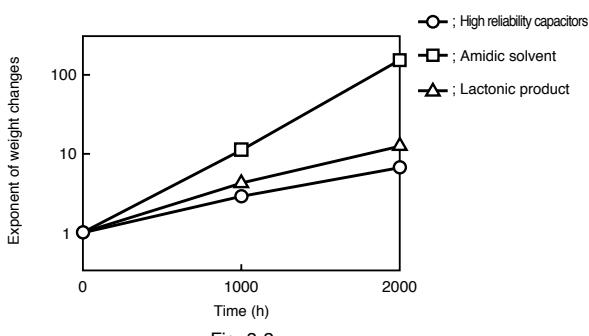

Fig. 3-2

### 5-3 Airtightness of sealing material

Since the electrolyte is stable for hours, the key element for capacitor's life is the sealing material. By optimizing the crosslinking density of the sealing material polymer, the sealing material of the High reliability capacitor attains its long life with electrolyte permeability less than that of the conventional capacitors.

Fig. 3-3 shows the test results on the airtightness of the sealing material obtained by changing the weight of the capacitors at a high temperature, producing capacitors with the conventional sealing material and improved one both containing the electrolyte used in the High reliability capacitor.

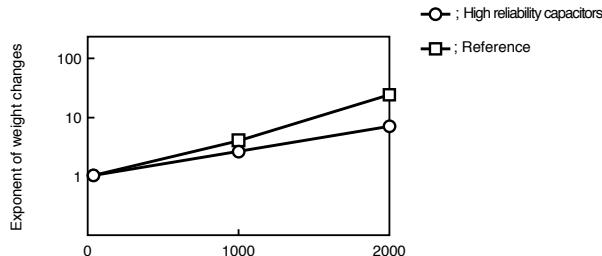

Fig. 3-3

### 5-4 Long-time stability of electrolyte

The electrolyte used in the High reliability capacitor is stable with low initial resistivity and small secular changes at a high temperature. Fig. 3-4 shows change in resistivity at 105°C.

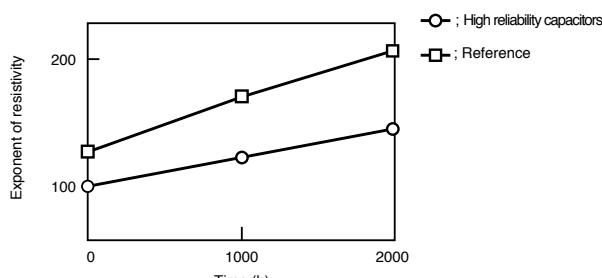

Fig. 3-4

### 5-5 Dielectric formation voltage and leakage current characteristics of anode foil

To increase the operating life by controlling the gas generation inside capacitor because of 1.5 to 2 times the rated voltage, while that of the previous capacitor is about 1.3 times the rated voltage.

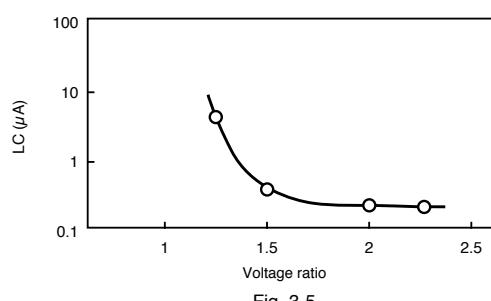

Fig. 3-5

### 5-6 Lowered ESR of Electrode Foil

To reduce the ESR of electrolytic capacitor, we have improved our chemical conversion technology for anode foil to develop lower ESR electrode foil compared to the conventional product as shown in Fig. 3-6

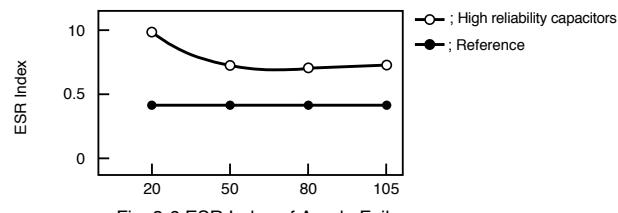

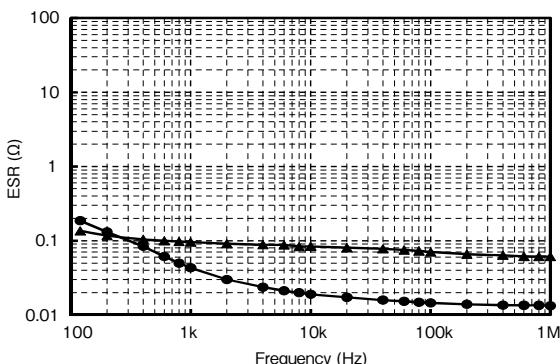

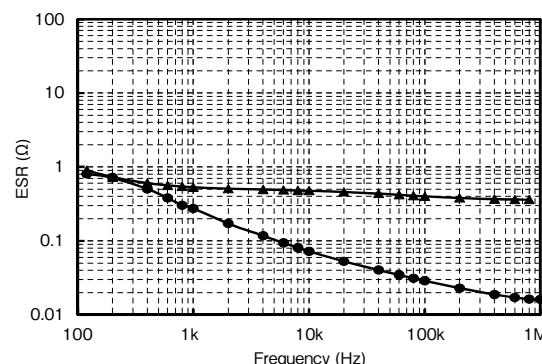

Fig. 3-6 ESR Index of Anode Foil

## ■ Systematized Classification of Electric Double Layer Capacitors

### DYNACAP & POWERCAP

#### For memory backup

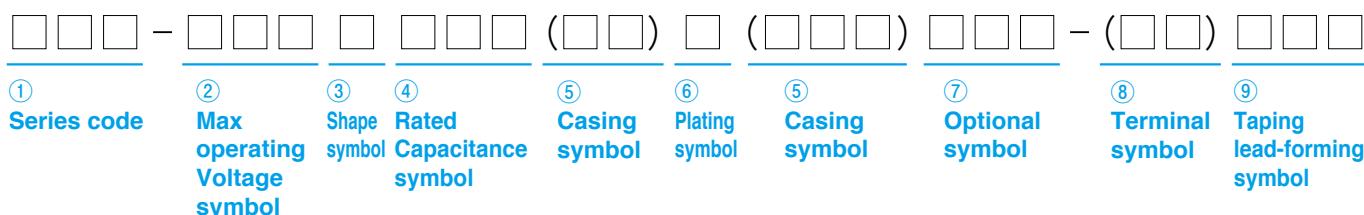

#### For power & energy

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications  
from ELNA to ensure that the component is suitable for your use.

## ■ Product Symbol System for Electric Double Layer Capacitors

### ① Series code

Please refer to the page of each series.

### ② Max operating voltage symbol

Example

Max operating voltage (V)	Voltage symbol
2.5	2R5
2.7	2R7
3.3	3R3
3.6	3R6
5.0	5
5.5	5R5
6.3	6R3

### ④ Rated capacitance symbol

Example

Capacitance (F)	Capacitance symbol	Capacitance (F)	Capacitance symbol
0.047	473	10	106
0.07	703	15	156
0.1	104	20	206
0.2	204	22	226
0.22	224	25	256
0.33	334	30	306
0.4	404	33	336
0.47	474	40	406
0.68	684	50	506
0.9	904	100	107
1	105	200	207
1.5	155	300	307
2.7	275	500	507
3.3	335	600	607
4.7	475	1200	128
5.6	565	1500	158
6.8	685	3000	308

### ③ Shape symbol

Please refer to the page of each series.

### ⑤ Casing symbol

Please refer to the page of each series.

### ⑥ Plating symbol

Example

Symbol	Contents
U	Sn 100% plating or Sn+Cu plating
T	Sn 100% plating

### ⑦ Optional symbol

Example (For Automotive)

Symbol	Contents
Q	Based on AEC-Q200
M	Based on AEC-Q200

### ⑧ Terminal symbol

Please refer to the page of each series.

### ⑨ Taping, Lead-forming symbol

DZ,DZH,DZN,DY,DU : Write down one of the forming symbols given on page 15 to 19 for taping and lead-forming capacitors.

DVN,DVL,DVS,DS,DSK : Write down one of the forming symbols given on page 209 for taping capacitors.

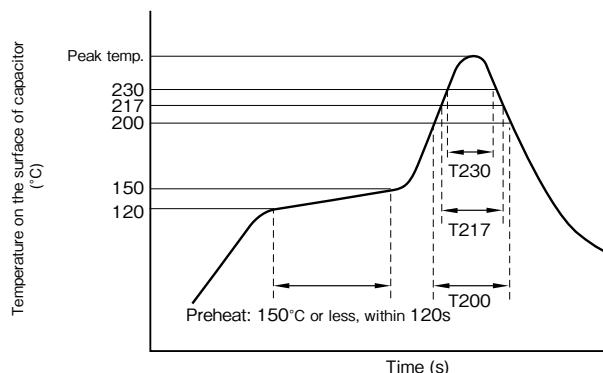

When taping or lead-forming is not necessary, leave the boxes blank.

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## ■ Recommended soldering conditions (series DS, DSK, DVN, DVL, DVS)

Reflow soldering conditions.

**Profile**

T200 : Duration while capacitor head temperature exceeds 200°C (s).

T217 : Duration while capacitor head temperature exceeds 217°C (s).

T230 : Duration while capacitor head temperature exceeds 230°C (s).

The measurement temperature point is the case top.

Series	Size	Peak temp. (5s Max)	T230	T217	T200	Times
DS DSK	φ4.8 to φ6.8	250°C Max	Within 20s	Within 30s	Within 40s	2 Max
DVN DVL DVS	φ12.5	260°C Max	Within 20s	Within 30s	Within 50s	2 Max

Attention : Carry out soldering work at low temperature and in the shortest time within above conditions.

Do NOT reflow solder, when cell voltage is above 0.3V.

\* Please consult with us about reflow soldering conditions other than the above.

## ■ Recommended soldering conditions

### ● Electric Double Layer capacitors (Lead free type)

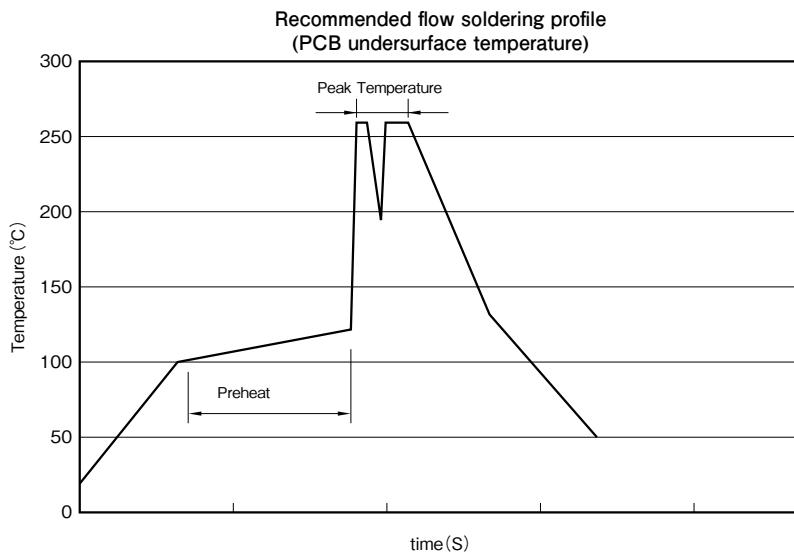

#### (1) Soldering iron conditions

Iron tip temperature should be  $400^{\circ}\text{C} \pm 5^{\circ}\text{C}$  within the duration of 4 seconds.

However, if it is series DC or DCK, iron tip temperature should be  $360^{\circ}\text{C} \pm 5^{\circ}\text{C}$  and the time should be 4 seconds or less.

#### (2) Flow soldering conditions

The recommendation soldering conditions of the product in which flow soldering is possible are as graph.

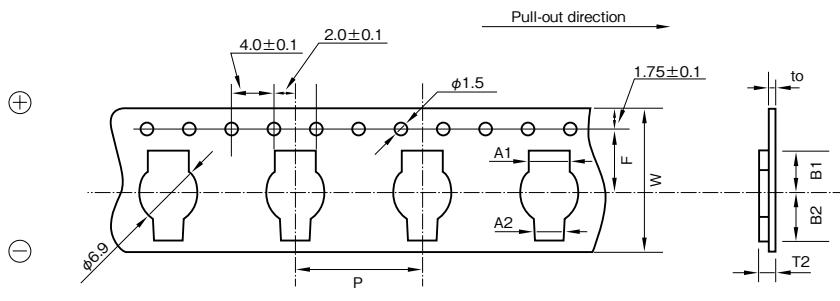

Type	Series	Size	Preheat		Peak	
			Temperature	Time	Temperature	Time
Coin cell	DB,DBN,DBJ DBS,DX,DXN DXJ,DXS,DK DH,DHL,DHC	φ11.5 to φ21.5	100 to 110	Within 30s	260°C Max	Within 5s
Large capacitance	DZ,DZH,DZN DU,DY,DZP	φ6.3 to φ35	100 to 130	30 to 60s	260°C ± 5°C	Within 10s

### Cautions when soldering

- (1) Do not dip the capacitor into melted solder.
- (2) Do not flux other part than the terminals.
- (3) If there is a direct contact between the sleeve of the capacitor and the printed circuit pattern or a metal part of another component such as a lead wire, it may cause shrinkage or crack.
- (4) If it is a coin type, please manage so that main part temperature including preheating does not exceed 90°C.
- (5) Please refer to cautions for using on page 211 to 212 and product specifications about other notes.

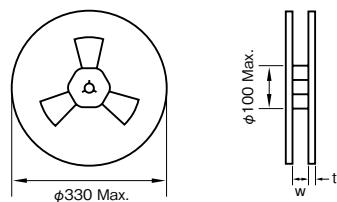

### ■ Carrier tape dimensions (Series DS, DSK) polarity L

## Cautions for Using Electric Double Layer Capacitors (DYNACAP , POWERCAP)

### ■ Usage

#### 1. Electric double layer capacitors (EDLC) use a conductive organic electrolyte.

The use at excessive mounting temperature or exceeding the upper category temperature can cause the electrolyte to leak. Especially, coin and multilayer coin types for the memory backup excluding the DZ, DZH, DZN, DU, DY, DZP, DW series use a low elastic plastic as the sealant in the cell construction like coin batteries; therefore, avoid using such capacitors in the Vicinity of automotive equipment with steep temperature change, and heating element such as motor, relay, transformer, power IC, etc. because of the risk of leakage of electrolyte.

#### 2. Since EDLC is polarized, do not apply a reversed voltage.

EDLC is polarized. If a reversed voltage is applied for a long time, the leakage current will increase abruptly, which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases.

#### 3. Do not apply any voltage higher than the operating maximum voltage (this means the surge voltage in the case of short-time charge).

If an overvoltage is applied to the product, the leakage current will increase abruptly and the product will become overheated, which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases.

#### 4. Do not use smoothing a power supply ( for absorbing its ripple).

Since the internal resistance of EDLC is high, the product will be overheated if it is used for smoothing a power supply (for absorbing its ripple), which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases .

#### 5. Do not use in a circuit where quick charge and discharge are repeated Very often.

In a circuit where quick charge and discharge are repeated very often , the product will become overheated, which may cause a decrease in the capacity, an increase in the internal resistance, and causing leakage or damage to the product in some cases.

Reduce the charge and discharge currents while selecting a product with low internal resistance, and make sure that the product surface temperature does not rise.

#### 6. EDLC life depends heavily on the ambient temperature.

①The lifetime of EDLC is seriously affected by change in ambient temperature. If the temperature is lowered by 10°C, the lifetime will be approximately doubled. Therefore, the product should be used at a temperature lower than the guaranteed maximum value for maximum life.

②If the capacitor is used at a temperature exceeding its maximum guaranteed temperature, not only is its life shortened, but increased vapor pressure of electrolyte or electrochemical reactions may increase the internal pressure, and causing leakage or damage to the product in some cases.

#### 7. Do not use the product in an ambient atmosphere containing waterdrops ( condensation ) or toxic gases.

Although EDLC is sealed, water droplets or toxic gases may do degradation characteristics, a leakage and corrode the lead wires and the case, which may cause a breaking of the wires.

Avoid abrupt temperature changes, which may cause water droplets, resulting in product deterioration and electrolyte leakage.

#### 8. Contact us before connecting the products in series.

A series connection will cause imbalance in the voltage, charged to the capacitors and an overvoltage may be charged to one or more them. This may cause a decrease in the capacity, an increase in the internal resistance and causing leakage or damage to the product in some cases. When using series connection for several capacitors, please derate the applied voltage from the operating maximum voltage or use balancing circuits (bleeder resistor, etc.) to compensate for the imbalance in the applied voltage for each capacitor. Moreover, please ensure the arrangement does not cause temperature fluctuation between capacitors.

#### 9. About vibration.

A terminal blank, a terminal bend, and a crease may occur by adding too much vibration to a capacitor.

Moreover, depending on the case, an EDLC may do degradation of the characteristic, breakage, and a leakage.

When you become too much vibration, please contact us.

#### 10. When used on a double sided printed circuit board, do not overlap the wiring patterns on the mounted part.

A short circuit may be created by certain wiring conditions. Should the electrolyte leaks, the circuit pattern may cause a short circuit, resulting in tracking or migration.

#### 11. Do not keep In high temperature and high humidity atmospheres.

①Avoid high temperature or high humidity or direct rays when storing capacitors.

②Keep the product in a place where the temperature is 5°C to 30°C and the humidity is lower than 60%. Avoid an abrupt temperature change, which may cause condensation or deterioration of the product or liquid leakage.

③Do not store EDLC at a place where there is a possibility that they may get water, salt or oil spill.

④Do not store EDLC at place where the air contains dense hazardous gas (hydrogen sulfide, sulfurous acid, nitrous acid, chlorine ammonia, etc.).

⑤Do not store EDLC at a place where it gets ultraviolet ray or radioactive ray.

## 12. Capacitors fitted with a relief valve

①The relief valve is provided with a valve function with part of the case made thin to avoid explosion by increased internal pressure when the capacitor is under abnormal load such as overvoltage or reverse voltage. After activation of the relief valve, the capacitor must be replaced as it does not restore.

②For the capacitors with a case relief valve (series DZ,DZH,DZN,DZP,DU,DY), provide a void on the top of the relief valve so as not to hamper its activation. Make a void of 2 mm or more for the product of φ18 or less in diameter, and a void of 3 mm or more for the product of φ20 to φ35 mm in diameter on the top.

## 13. Use at a high altitude

The use of capacitors at high altitudes such as on an airplane causes a large difference between the internal pressure of the capacitors and the atmospheric pressure.

However, there is no problem in use under atmospheric pressure up to about an altitude of 10,000 meters.

If the condition is severe like space, please contact us.

## ■Mounting

### 1. Do not overheat when soldered.

Depending on the type and size of the board, the product may be subjected to overheat, leading to loss of airtightness. This may greatly shorten the product life or cause liquid leakage.

In case of a 1.6mm-thick and single side printed board. for example, keep the following soldering conditions: temperature lower than 260°C, time within 6.5 to 10 seconds.

When a board thinner than 1.6 mm or multi-layer printed board is used, contact us.

In the case of hand soldering, the iron tip temperature is lower than 400°C, time is shorter than 4 seconds.

The coin types and multilayer coin types excluding the DZ and reflow-compatible coin types use polypropylene as the packing material for sealing and therefore susceptible to excessive heat. Note that the component body temperature shall be controlled so as not to exceed 90°C including preheating.

### 2. When soldering the capacitor to the wiring board, do not attach the body of the capacitor to the circuit board.

If the body of the capacitor is attached directly to the circuit board, the flux or solder can blow through the through holes in the circuit board, negatively

impacting the capacitor.

Moreover, the heat influence at the time of soldering can be reduced by floating the body.

### 3. Contact us when cleaning is necessary after soldering.

Certain types of solvents are not compatible and may cause damage.

### 4. Contact us when the product is attached by adhesive bonding.

Certain types of adhesives are not compatible. Paste bond partially between the product and the board so that the product will not adhere completely to the board.

Do not raise the temperature over the guaranteed value while the bond is hardening.

### 5. Heating conditions of adhesive curing oven

During heating of the adhesive curing oven, application of excessive heat may significantly shorten the product life or cause liquid leakage. Control the body temperature so as not to exceed 90°C during work while setting the allowable atmospheric temperature below 110°C, and allowable heating time within 30 seconds.

For the heating conditions deviating from the above, consult with us providing your temperature profile conditions.

### 6. Be careful not to apply an excessive force to the capacitor body, terminals or lead wires.

①Mount the capacitor while making sure that the terminal spacing of the capacitor and the spacing of the holes in the printed wiring board are aligned.  
②If the capacitor body is subjected to stress such as grabbing, falling, bend, pushing or twisting after mounted, its terminals may come off, leading to open, short or liquid leakage.

## ■Other cautions

### 1. Emergency procedures

If the EDLC overheats or starts to smell, immediately switch off the units main power supply to stop operation.

Keep your face and hands away from the EDLC, since the temperature may be high enough to cause the EDLC to ignite and burn.

### 2. Periodical inspections should be established for the EDLC used in industrial appliances.

The following items should be checked:

- ①Appearance : Check if there is leakage.
- ②Electronic performance : Check the leakage current, the electrostatic, the internal resistance and other items described in the catalog or the product specifications.

### 3. Disposing of EDLC

- ①Punch a hole or crush the EDLC (to prevent explosion) before incineration at approved facility.
- ②If they are not to be incinerated, bring them to a professional industrial waste disposal company.

### 4. Other notes

Please refer to the following literature for anything not described in the product specifications or the catalog. (Technical Report of Japan Electronics and Information Technology Industries Association #EIAJ RCR-2370B "Guideline of notabilia for fixed electric double layer capacitors")

## 5.5V SMD, Low Resistance Capacitors

GREEN CAP

SMD

70°C

- Size :  $\phi 12.5 \times 8.5$ Lmm, compatible with surface mounting and low ESR.
- Unlike batteries, safe and high reliability without containing active and hazardous substance.
- Unlike batteries, excellent charge and discharge characteristics with no chemical reactions.
- Responds to temperature 260°C during the reflow peak.
- Ideal for industrial, smart meter, backing up of RTC's for surveillance camera, momentary power assistance of a battery etc.

Marking color : White print on an brown sleeve

## Note

Do not apply external force to products or terminals as stress such as twisting, bending, pushing, or falling of such products or terminals may remove the terminals, resulting in an open/short circuit or liquid leakage.  
Avoid applying excessive heat to capacitors during heating of an adhesive curing oven. For details, refer to the precautions in use of DYNACAP.

DXN	—	5R5	<input type="checkbox"/>	224	<input type="checkbox"/>	U
Series code	Max.operating voltage symbol	Terminal code	Rated Capacitance symbol	Additional symbol		

Part number is refer to following table.

### Note

Do not apply external force to products or terminals as stress such as twisting, bending, pushing, or falling of such products or terminals may remove the terminals, resulting in an open/short circuit or liquid leakage.  
Avoid applying excessive heat to capacitors during heating of an adhesive curing oven. For details, refer to the precautions in use of DYNACAP.

### Standard Ratings

Max. operating voltage (V)	Rated capacitance (F)	ELNA Parts No.	$\phi D \times L$ (mm)
5.5	0.047	DXN-5R5V473U	11.5×13.0
		DXN-5R5H473U	11.5× 5.0

5.5	1.5	DXN-5R5V155U	19.0×20.5

\*It can charge and discharge with 1.5 times as much current (mA) as rated capacitance.

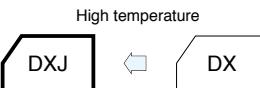

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## 5.5V Miniaturized High Temperature Capacitors

GREEN CAP

85°C

- High temperature type of Series DX.
- 5mm tall. Max. thin profile (H-shaped).
- Miniaturized but can encase up to 0.33F in 11.5×5Lmm case, and 1.0F in φ19.0×20.5Lmm case.
- Ideal for backing up of CMOS's, IC's of camera, microcomputers, RAM's, RTC's and the like used in audio, general electronic device, and others.

Marking color : White print on a black sleeve

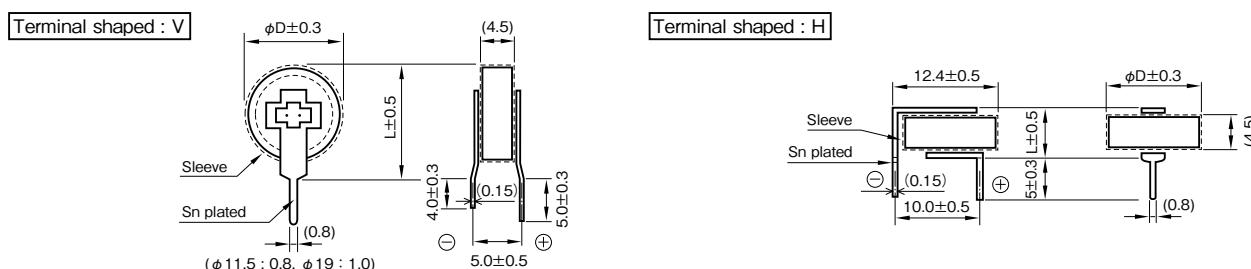

## Specifications

Item	Performance

### 3.6V Miniaturized Low ESR High Temperature Capacitors

GREEN  
CAP      85°C

- Long life of 3.6V 2000 hours, low ESR in DX series and this size.
- 5mm tall. Max. thin profile (H-shaped).
- Wider temperature range (-25 to +85°C) than battery.
- Miniaturized but can encase up to 0.47F in 11.5×5Lmm case and 1.0F in 19.0×20.5L mm case.
- It excels in rapid charge.
- Ideal for backing up of CMOS's, IC's of camera, microcomputers, RAM's, RTC's and the like used in audio, general electronic device, and others.

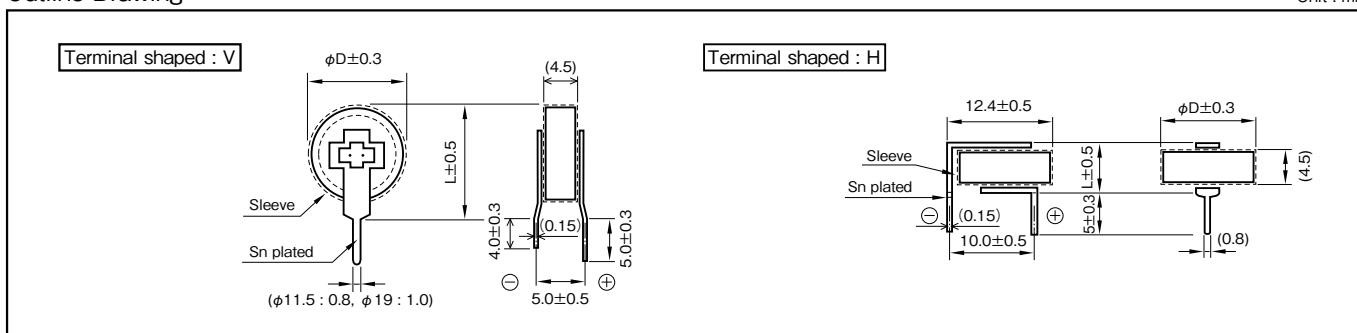

Marking color : White print on a black sleeve

Series code	Max.operating voltage symbol	Rated capacitance symbol	Additional symbol	Terminal shaped	Taping symbol			

Part number is refer to following table.

## Standard Ratings

Max. operating voltage (V)	Rated capacitance (F)	ELNA Parts No.	φD×L (mm)
2.5	0.2	DS-2R5H204T614-H2L	6.8×1.4
3.3	0.2	DSK-3R3H334U-HL	6.8×1.4
2.5	0.33	DS-2R5H334U-HL	6.8×2.1
3.3	0.33	DSK-3R3H334U-HL	6.8×2.1

\* Soldering conditions are described on page 207.

## Standard, Large Capacitance Type Capacitors

GREEN CAP  
60°C / 70°C  
2.5V / 2.7V

- Pollution-Free ; with no pollutants such as Cd or Pb.
- Unlike batteries ; excellent charge and discharge characteristics with no chemical reactions

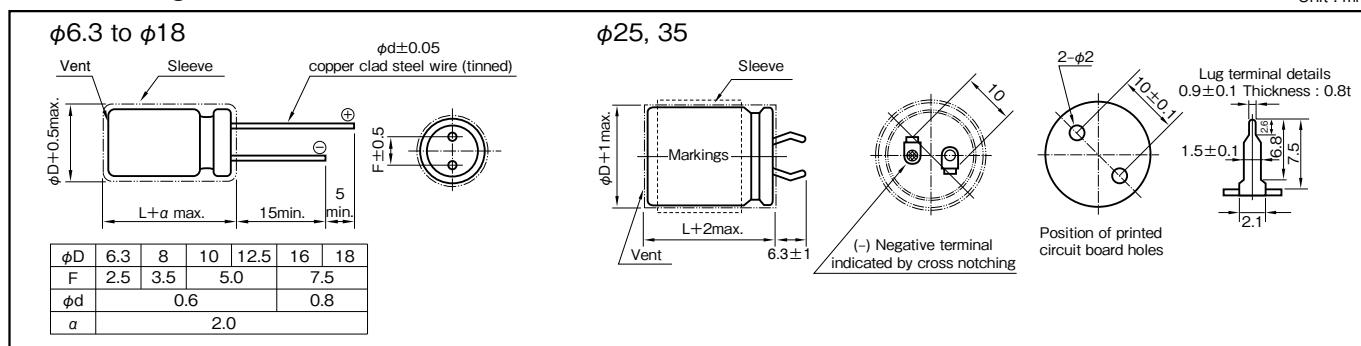

Marking color : White print on a black sleeve

## Specifications

Item	Performance			
Series name	Series DZ	Series DZH		
Category temperature range (°C)	-25 to +70	-25 to +60		
Tolerance at rated capacitance (%)	-20 to +80	-20 to +80		
Internal resistance at 1kHz	Refer to the following page			
Characteristics at high and low temperature	Percentage of capacitance change Internal resistance	Within ±30% of the value at 20°C Less than five times of the value at 20°C	Percentage of capacitance change Internal resistance	Within ±30% of the value at 20°C Less than eight times of the value at 20°C
Endurance	Test temperature Test time Percentage of capacitance change Internal resistance	70°C 1000 hours Within ±30% of the initial measured value Less than four times of the initial specified value	Test temperature Test time Percentage of capacitance change Internal resistance	60°C 2000 hours Within ±30% of the initial measured value Less than four times of the initial specified value
Shelf life	Same as endurance		Same as endurance	
Applicable standards	Conforms to JIS C5160-1 2009 (IEC 62391-1 2006)

## 1 Description of Electric Double Layer Capacitor

### 1-1 Basic Concepts

Generally capacitors are constructed with a dielectric placed between opposed electrodes, functioning as capacitors by accumulating charges in the dielectric material. Aluminum electrolytic and tantalum electrolytic capacitors, for example, use an aluminum oxide film and a tantalum oxide film as the dielectric, respectively.

On the other hand, Electric Double Layer Capacitors have no visible dielectric in a general sense but utilize the state referred to as the electric double layer, which is developed naturally on the interface between substances, as the function of dielectric.

### 1-2 Operating Principle

The Electric Double Layer represents the state in which positive and negative charges exist at a very short distance on the boundary where contact occurs between two different substances (e.g. solid and liquid). By externally applying a voltage below a certain voltage to the boundary, higher charges can be accumulated. Accordingly, charge and discharge of electric double layer capacitors utilize adsorption and desorption of ions to the ionic adsorption layer (Electric Double Layer) formed on the electrode surface of the activated carbon used for electrodes.

Applying DC voltage externally across the electrodes of the Electric Double Layer allows almost no passage of current up to a certain voltage, exhibiting a condition like insulation.

However, the application of voltages exceeding the certain voltage causes electrolysis to occur in the electrolyte, resulting in abrupt passage of current.

This voltage determines the resistance of voltage of an Electric Double Layer Capacitor. We use an organic electrolyte and its standard electrolysis occurs at the voltage of about 2.5 to 3V.

### 1-3 Advantages and Disadvantages of Electric Double Layer Capacitor

#### [Advantages]

- (1) Small size and capacitance in farads (F) available by utilizing the activated carbon electrode with a large surface area
- (2) No special charging circuit and constraints during discharge are required.
- (3) No effect on the life through overcharging and overdischarging
- (4) Environmentally clean energy

#### [Disadvantage]

- (1) The life is limited due to the use of electrolyte.
- (2) Series connection is required when used with a low resistance of voltage at a high voltage.
- (3) Cannot be used in AC circuits due to high internal resistance unlike aluminum electrolytic capacitors.

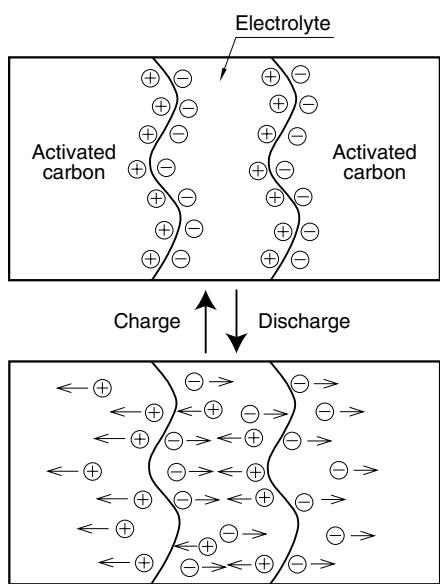

Fig.1 Schematic of Principle of Electric Double Layer Capacitor

**1-4 Construction of DYNACAP**

The series which consists of coin cells is similar to that of coin-type batteries as shown in Fig.2. DYNACAP contains a single cell or two to three cells stacked in series.

Since these series have a large electrode-to-electrode distance and a small electrode area exhibiting a large internal resistance, they are suitable for the memory backup application that involves microcurrent discharge.

The cylindrical cell construction as seen in the DZ and DZN series has the construction similar to that of aluminum electrolytic capacitors as shown in Fig.3.

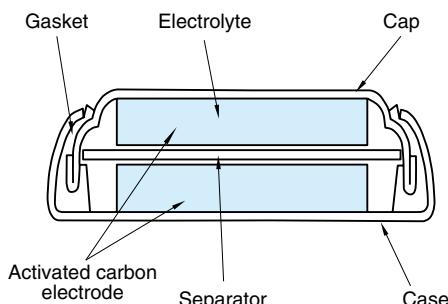

Fig.2 Example of Basic Construction of Coin Cell

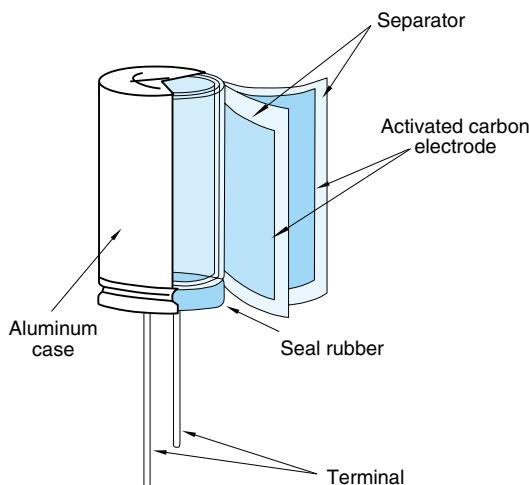

Fig.3 Example of Basic Construction of Cylindrical Cell

These series have a small electrode-to-electrode distance, allowing a large electrode area because of the winding structure. This decreases the internal resistance, which is primary suitable for applications requiring high-power such as motor drive and LED lighting that need high currents.

**2 Description of Life Expectancy**

Generally, the life of Electric Double Layer Capacitors is largely affected by the ambient temperature.

The expected life is approximated by the equation as shown below:

$$L = L_0 \times 2^{\left( \frac{T_0 - T}{10} \right)}$$

Where,

$L$  : Expected lifetime at temperature  $T$

$L_0$  : Lifetime at temperature  $T_0$

$T$  : Expected working temperature

$T_0$  : Upper category temperature

Note that the above equation does not cover charge and discharge. In the case of charge and discharge, heat generation occurs inside a capacitor; the temperature rise by this heat generation must also be considered.

### 3 Calculation Method of Discharge Time

#### 3-1 Approximating the Discharge Time of Basic Constant Current Discharge

The discharge time at the constant current of a capacitor can be calculated by the following equation.

$$t = (C \times \Delta V) / I$$

Where,

- t : Discharge time (sec.)
- C : Capacitor capacitance (F)
- $\Delta V$  : Working voltage range (V)
- I : Discharge current (A)

As an example, we calculate the discharge time when a capacitor of the DB series 5.5V 1F is charged with 5V and discharged to 3V at a constant current of 1 mA. Since the working voltage range  $\Delta V$  is 2V from 5 – 3V,  $t = (1F \times 2V) / 0.001A$  from the above equation, and the discharge time can be calculated as 2,000 seconds (about 33 minutes). Note that the actual discharge time may be different because this equation does not cover the effect of the self-discharge and the IR drop by internal resistance described below.

#### 3-2 Effect of Self-discharge at Microcurrents

When backup is made by discharge with a micro-current below some  $\mu A$  especially for the memory backup application and the like, the discharge time must be determined while taking into account the self-discharge as shown in Fig.4.

The value closer to the actual discharge curve is obtained by adding the voltage drop through the self-discharge determined from the voltage retention characteristic test to the discharge curve given by calculation.

Note that the value of self-discharge varies by the charge time, charging current and an ambient temperature.

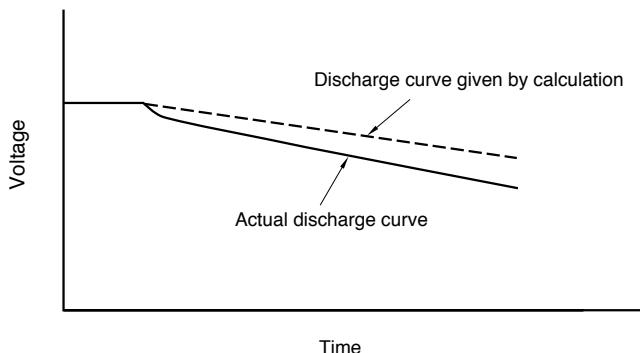

Fig.4 Example of Discharge Curve involving Self-Discharge

#### 3-3 Effect of IR Drop at Large Currents

When a large Current discharge and a capacitor with a high internal resistance are used, the effect of IR drop by the product of the internal resistance and the current must be considered as shown in Fig.5. Moreover, the maximum discharge current of the product (coin cell series) of a memory backup use recommends below 1 mA/F (at 20 °C).

When a large current is required in a very short time, or a large instantaneous current flows at the start of discharge, the voltage drop indicated with  $\Delta V_1$  counts. However, when the discharge continues as it is, the discharge curve indicates in a manner showing a slow diffusion and then keeps a constant straight line.

We also make calculation including  $\Delta V_2$  of the intersection extending from the initial discharge and the discharge straight line section including the diffusion curve when indicating the DC internal resistance.

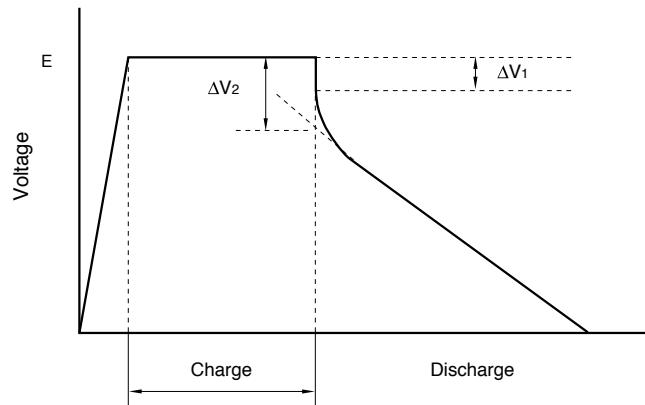

Fig.5 Example of Discharge Curve involving IR Drop

Due to IR drop, the shape of the discharge curve varies by the internal resistance and ambient temperature for each series.

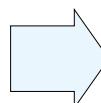

## 4 Series-parallel connection packaged products.

Electric Double Layer Capacitors have a low operating voltage per cell.

To deal with this, ELNA is ready to offer series packaging for high operating voltages to meet to various needs.

Please consult with us on optimization and design.

Packaged item

Example of packaged item

In case of a low voltage (up to about 24 V) for the DZ and DZN series with relatively low capacitance, we are preparing simple packaged products.

No full-scale voltage equalization circuit has been equipped yet, but comparatively low cost and flexible layout can be realized.

## 5 Moisture-proof provision

If a electric double layer capacitor is used in a heat-and-high-humidity environment, the characteristic will deteriorate.

We can improve the durability in heat-and-high-humidity environment by coating of special resin.

Please consult about resin coating.

## 6 Regarding Recovery Voltage

After charging and then discharging the electric double layer capacitor, and further causing short-circuit to the terminals and leave them alone, the voltage between the two terminals will rise again after some interval. This voltage is called recovery voltage.

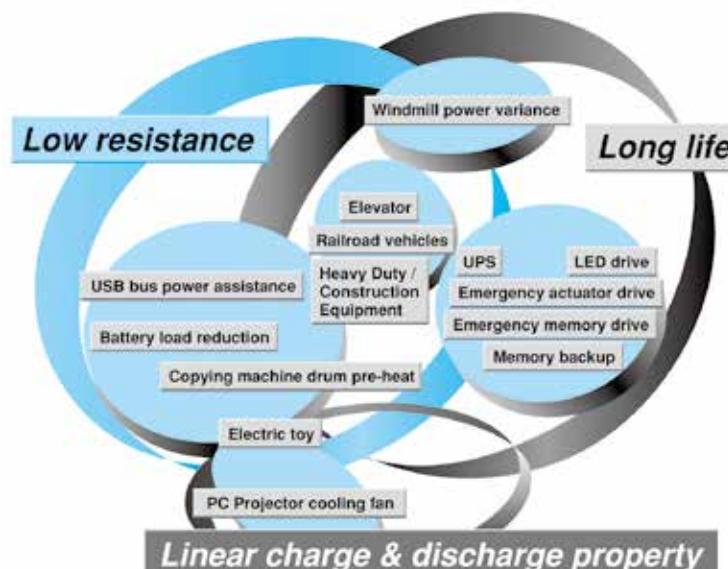

This voltage may cause the bad influence to the low-voltage driven components (CPU, memory, etc.) or damage of the capacitor with soldering.

Discharging before use is safer. It is important especially when using it by series connection.

Moreover, it is possible making the terminals in short-circuit condition at the production stage. Please consult us for adequate procedures.

## 7 Applications

### *Features & Benefits of Electric Double Layer Capacitor*

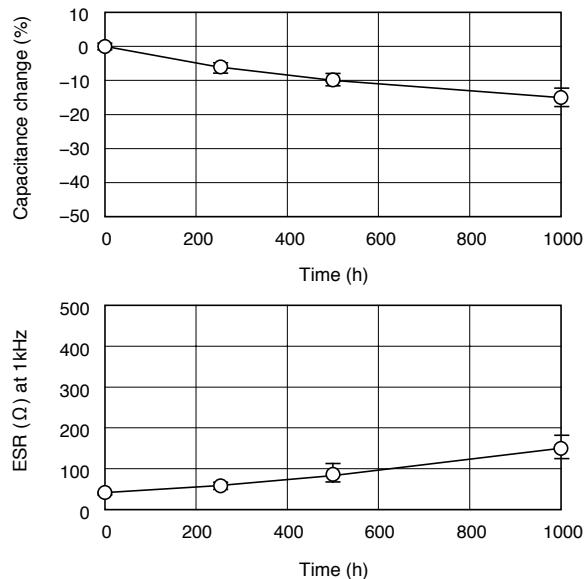

EDLC

### 7 Electric Characteristics Data

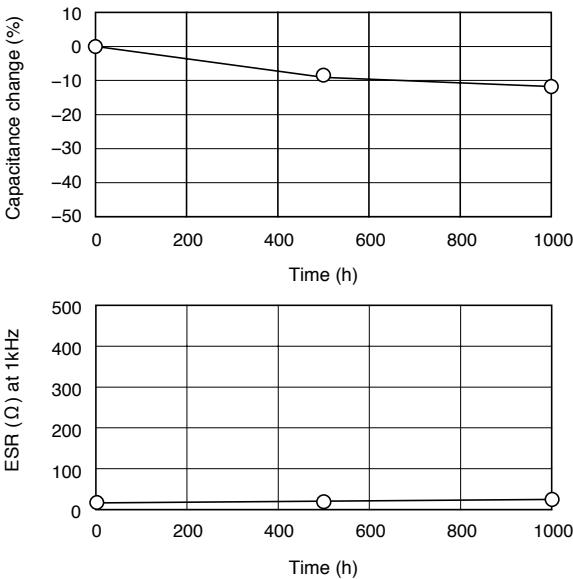

#### 7-1 Coin type for memory back-up

DYNACAP Series DXJ  
5.5V 0.33F/DXJ-5R5H334U  $\phi$ 11.5×5L (mm)

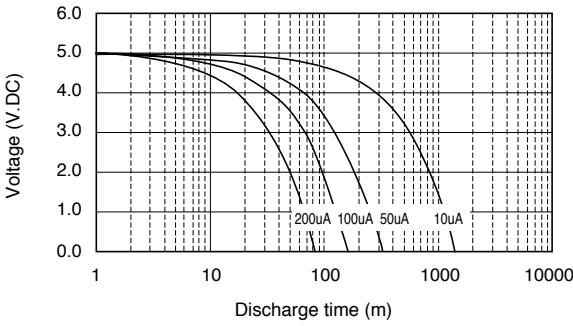

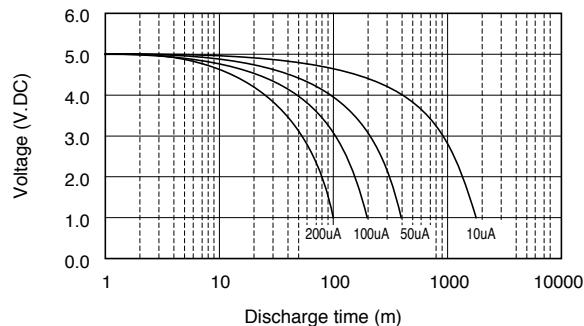

##### ■ Endurance (85°C 5.5V.DC)

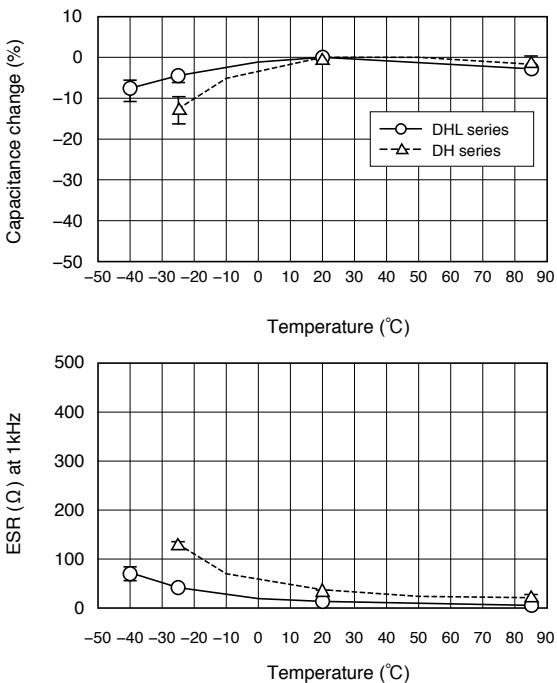

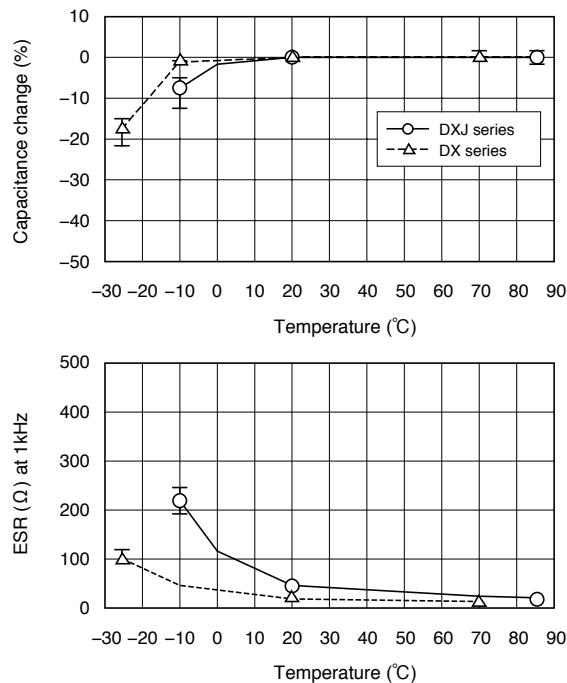

DYNACAP Series DHL  
5.5V 0.22F/DHL-5R5D224T  $\phi$ 13.5×9.5L (mm)

##### ■ Discharge characteristics

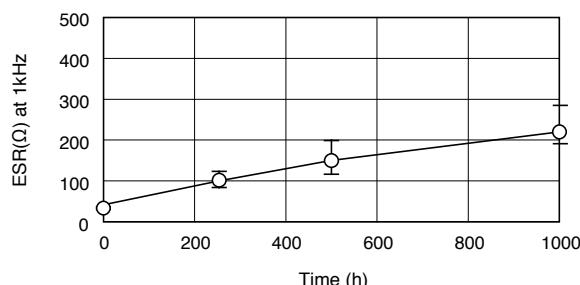

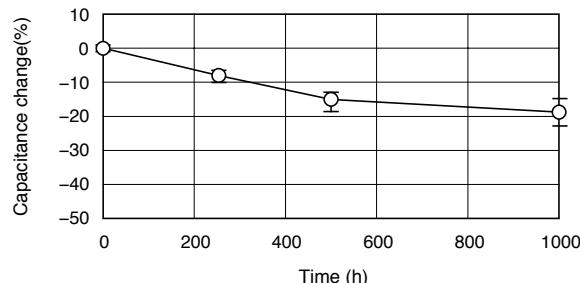

##### ■ Characteristics at high and low temperature

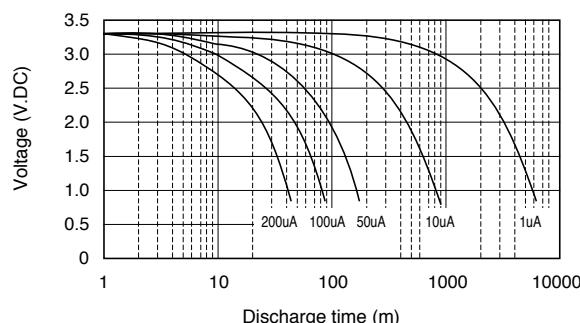

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

DYNACAP Series DSK  
3.3V 0.22F/DSK-3R3H224T  $\phi$ 6.8×2.1L (mm)

■ Endurance (60°C 3.3V.DC)

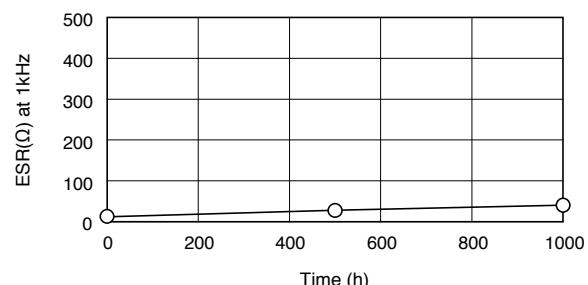

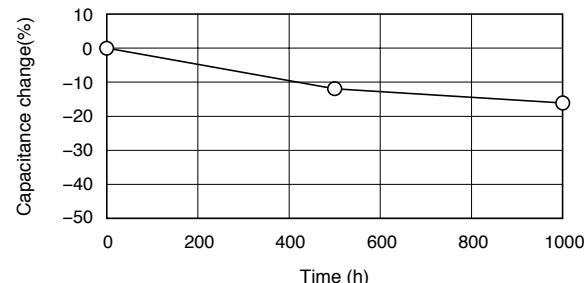

■ Discharge characteristics

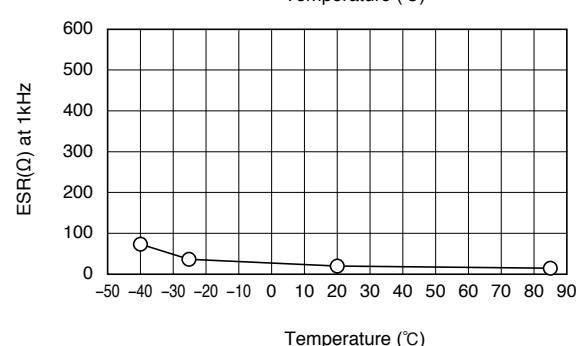

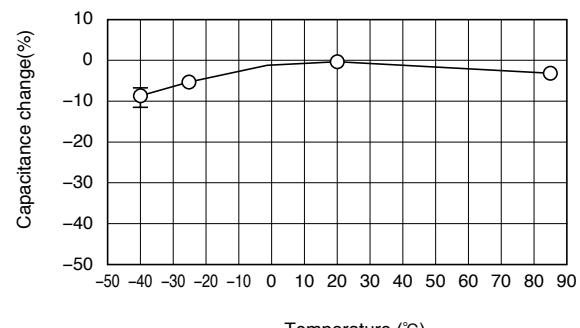

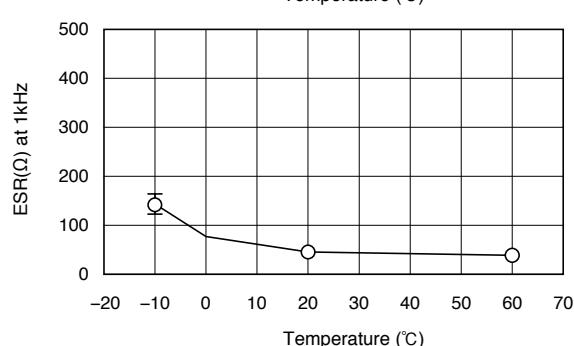

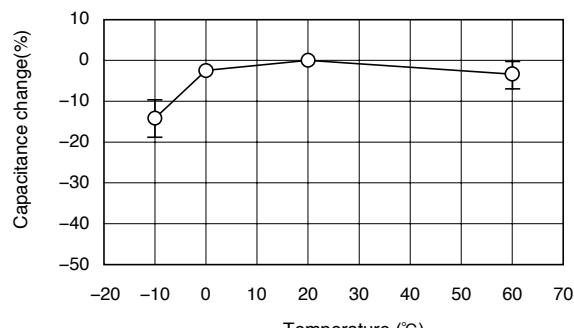

DYNACAP Series DVL  
5.5V 0.22F/DVL-5R5D224T-R5  $\phi$ 12.5×10.5L (mm)

■ Endurance (85°C 5.5V.DC)

■ Characteristics at high and low temperature

### (7) Shape code

Please refer to the page of each series.

### (6) Terminal code

Please refer to the page of each series.

## ■ Cautions for Using Film Capacitors

### 1 Operation voltage

The plastic film capacitor varies in the maximum applicable voltage depending on the applied voltage waveform, current waveform frequency, ambient temperature (capacitor surface temperature), capacitance value, etc.

Be sure to use capacitors within the specified values by checking the voltage waveform, current waveform, and frequency applied to them (In the application of high frequency, the permissible voltage varies with the type of the capacitor).

For detail see the specification).

### 2 Operating Current

The pulse (or AC) current flowing through the capacitor is expressed as:  $I = C \times dV/dt$

type	1	2	3	4
waveform				
(rms)	$E/\sqrt{2}$	$E/\sqrt{2}$	$E/\sqrt{t/(2T)}$	$E/\sqrt{3}$
type	5	6	7	8
waveform				
(rms)	$E/\sqrt{t/(3T)}$	$E$	$E/\sqrt{t/T}$	$\sqrt{\frac{1}{2T}(I_1^2 + I_2^2 + I_3^2 + I_4^2)}$

### 4 Charging and discharging

Because the charging and discharging current of capacitor is obtained by the product of voltage rise rate ( $dV/dt$ ) and capacitance, low voltage charging and discharging may also cause deterioration of capacitor such as shorting and open due to sudden charging and discharging current.

When charging and discharging, pass though a resistance of  $20\Omega/V$  to  $1000\Omega/V$  or more to limit current.

When connecting multiple film capacitors in parallel in withstand voltage test or life test, connect a resistance of  $20\Omega/V$  to  $1000\Omega/V$  or more in series to each capacitor. (For detail see the specification)

In additional, capacitors must be discharged with resistor before handling.

Because the capacitor hasn't discharge resistor inside, so there is residual but maybe deathful electric energy contained.

### 5 Buzzing noise

Any buzzing noise produced by capacitor is caused by the vibration of the film due to the coulomb force that is generated between the electrodes with opposite poles.

If the wave-form with a high distortion rate or frequency is applied across the capacitor, the buzzing noise will become louder.

But the buzzing noise is of no damage to capacitor.

### 6 Surface over temperature $\Delta\theta_{case}$

When continuing current flows through the capacitor, the temperature inside the capacitor will rise, induced by accumulated heat.

If the temperature exceeds allowed hot-spot temperature, it might cause a short circuit or fire.

The limits described in the catalogue are not exceeded and it's necessary to check the temperature on the capacitor surface when it works.

Due to the fact that dissipation factor of the capacitor will generate the internal heat under the application of high frequency or high pulse current, temperature rise in it will occur and may cause deterioration of with standing voltage, even lead to break down (smoking or firing).

Therefore, the safety use of capacitor must be within the rated voltage(or category voltage)and the permissible current. The rated current must be considered by dividing into pulse current (peak current) and continuous current (rms current) depending on the break down mode, and when using, should make sure the both currents are within the permissible values.

### 3 Calculation of rms in various waveforms

In each waveform, calculate the rms value in the following formula.

### 7 Flame retardation

Although flame retardation epoxy resin or plastic case is used in the coating or encapsulating of plastic film capacitor, continuous outer high temperature or firing will break the coating layer or plastic case of the capacitor, and may lead to melting and firing of the capacitor element.

flame time (s)					
Class	volume (mm <sup>3</sup> )	$\leq 250$	$250 < \leq 500$	$500 < \leq 1750$	$1750 <$ Max. flame time (s)
A	15	30	60	120	3
B	10	20	30	60	10
C	5	10	20	30	30

### 8 Humid ambient

If used for a long time in a humid ambient, the capacitor might absorb humidity and oxidize the electrodes causing breakage of the capacitor.

If case of AC application, high humidity would increase the corona effect. This phenomenon causes a drop of capacitance and a increase of capacitor losses.

### 9 Storage conditions

1) Capacitors may not be stored in corrosive atmospheres, particularly not when chlorides, sulfides, acids, lye, salts, organic solvents or similar substances are present.

2) It shouldn't be located in particularly high temperature and high humidity, it must submit to the following conditions(unchanging primal package):

Temperature :  $\leq 35^\circ C$

Humidity :  $\leq 80\%$  RH, no dew allowed on the capacitor.

Storage time:  $\leq 24$  months (from the date marked on the capacitor's body or the label glued to the package)

For DC-Link Circuits Capacitors

85°C DC-LINK

- Used in DC-Link circuits, can replace electrolytic capacitor.
- PP film design, good temperature characteristics, stable capacity, low ESR, high ripple current handing capabilities, low Ls, long life.
- Aluminum case, filled with fire-retardant resin.
- Self-healing property.
- Used in Inverters of wind power and solar power, HEV or EV, welders, elevators, Motor Driver systems.

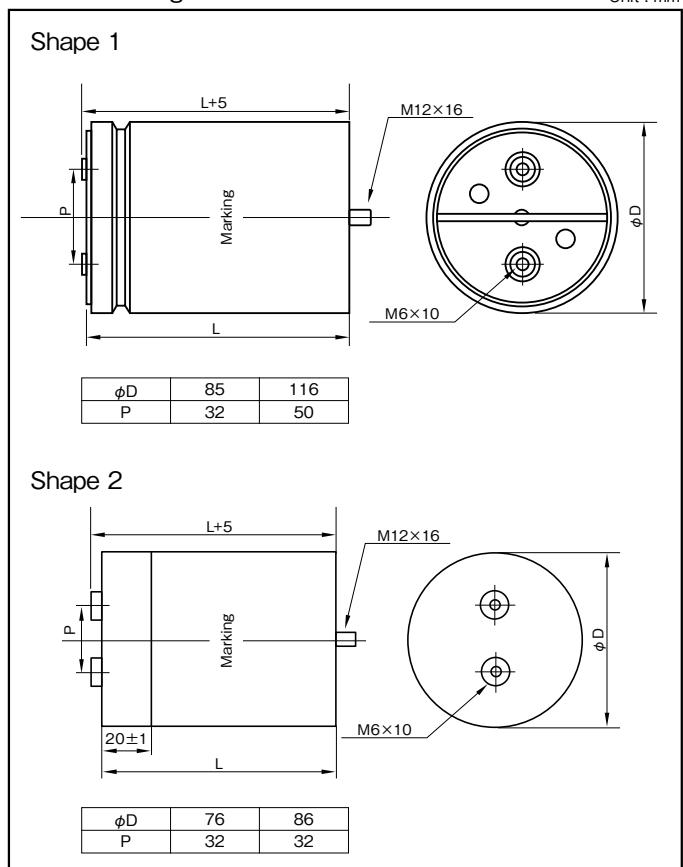

Specifications

Item	Performance	
Category temperature range (°C)	– 55 to +85	(at Hotspot in capacitor)
Tolerance at rated capacitance (%)	±5, ±10	(20°C, 50 to 120Hz)
Over Voltage	Rated voltage × 1.1	30% of on-load-duration
	Rated voltage × 1.15	30 min/day
	Rated voltage × 1.2	5 min/day
	Rated voltage × 1.3	1 min/day
	Rated voltage × 1.5	30 ms every time, 100ms/day
Dielectric Dissipation Factor	$2 \times 10^{-4}$ or less	
Life Expectancy	100000 hours	(at Hotspot in capacitor = 70°C)
Failure Rate	50Fit	
Withstanding DC Voltage	Between Terminals	Rated voltage × 1.5 10s
	Between Terminals and Case	(2x(Ratef voltage)/ $\sqrt{2}$ ) + 1000 or 3000 VAC whichever is lager 10 s (20°C, 50Hz)
Insulation Resistance	5000MΩ·μF or more (20°C, 100V DC, 1min)	
Reference Standard	IEC 61071

 It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

For DC-Link Circuits Capacitors

85°C DC-LINK

- Used in DC-Link circuits, can replace electrolytic capacitor.
- PP film design, good temperature characteristics, stable capacity, low ESR, high ripple current handing capabilities, low Ls, long life.
- Plastic case , filled with fire-retardant resin.
- Self-healing property.
- Used in Inverters of wind power and solar power, welders, elevators, Motor Driver systems.

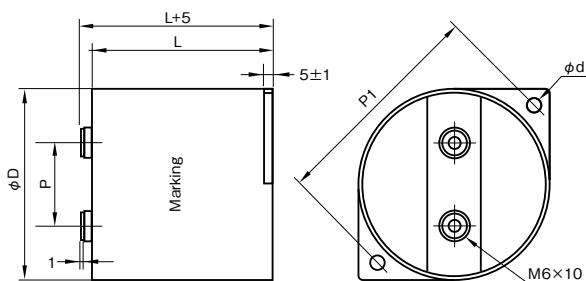

Specifications

Item	Performance	
Category temperature range (°C)	– 40 to +85	(at Hotspot in capacitor)
Tolerance at rated capacitance (%)	±5, ±10	(20°C, 50 to 120Hz)
Over Voltage	Rated voltage × 1.1	30% of on-load-duration
	Rated voltage × 1.15	30 min/day
	Rated voltage × 1.2	5 min/day
	Rated voltage × 1.3	1 min/day
	Rated voltage × 1.5	30 ms every time, 100ms/day
Dielectric Dissipation Factor	$2 \times 10^{-4}$ or less	
Life Expectancy	100000 hours	(at Hotspot in capacitor = 70°C)
Failure Rate	50Fit	
Withstanding DC Voltage	Between Terminals	Rated voltage × 1.5 VDC 10 s
	Between Terminals and Case	( $2x(Ratef\ voltage)/\sqrt{2}$ ) + 1000 or 3000 VAC whichever is larger 10 s (20°C, 50Hz)
Insulation Resistance	5000MΩ·μF or more	
Reference Standard	IEC 61071

## 1 The standard system of fixed plastic film capacitor for use in electronic equipment.

The standard system of fixed plastic film capacitor for use in electronic equipment includes the foundational standard, generic specification, sectional specification, blank detail specification and detail specification, or manufacturer specification.

Generic specification specifies the terminology, inspection procedures and test methods applied in sectional and detail specifications.

Sectional specification is classified according to the specific dielectric material and construction of capacitor, it prescribes preferred rating and characteristics and to elect from generic specification the appropriate quality assessment procedures, tests and measuring methods and to give general performance requirements for this type of capacitor. Blank detail specification is a supplementary document to the sectional specification and contains requirements for style, layout and minimum contents of detail specifications. Following please find the corresponding specification lists for plastic film capacitors.

No.	Standard
GB/T 2693 (IEC 60384-1)	Fixed capacitors for use in electronic equipment Part 1: Generic specification
GB/T 17702 (IEC 61071)	Power electronic capacitors
AEC-Q200	Stress test qualification for passive components
GB/T 25121 (IEC61881)	Railway applications - Rolling stock equipment - Capacitors for power electronics
GB/T21563 (IEC61373)	Railway applications - Rolling stock equipment Shock and vibration tests
GB/T 4798-1 (IEC 60721-3-1)	Classification of environmental conditions Part 3: Classification of groups of environmental parameters and their severities Section 1 Storage
GB/T 4798-2 (IEC60721-3-2)	Classification of environmental conditions Part 3: Classification of groups of environmental parameters and their severities Section 2 Transportation
GB/T 4798-3 (IEC 60721-3-3)	Classification of environmental conditions Part 3: Classification of groups of environmental parameters and their severities Section 3 Stationary use at weather protected locations

## 2 General Description of Film Capacitors

### 2-1 Principle of Capacitor Construction

The principle construction of a parallel plate capacitor is shown in Fig. 1.

When a voltage V is applied between the conducting electrodes placed opposite to each other, a certain amount Q of electric charge proportional to the voltage can be stored on the surfaces of the dielectric.

The proportional constant is called capacitance C, designating the ability of a capacitor to store energy in an electric field.

$$Q=C \cdot V$$

Q: Charge [Coulomb]

V: Voltage [Volt]

C: Capacitance [Farad]

The capacitance C of capacitor can be expressed by the following equation:

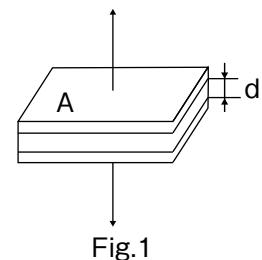

Fig.1

$$C[F] = \epsilon_0 \cdot \epsilon \cdot A / d$$

$\epsilon$ : dielectric constant

$\epsilon_0$ : dielectric constant in vacuum ( $= 8.85 \times 10^{-12} F/m$ )

A: electrode area [ $m^2$ ]

d: electrode distance [m]

The dielectric constant of Polypropylene film is 2.2.

Larger capacitances can be obtained by entailing the electrode area A or by reducing the distanced.

Table 1 shows the dielectric constants of typical film dielectrics used in capacitors.

In many cases, capacitor names are related to their dielectric material used.

Table-1

Dielectric	Dielectric Constant
Polypropylene	2.2
Polyester	3.3
Polyimide	3.5
Polyethylene	2.3
Polycarbonate	2.8
Polytetrafluoroethylene	2

The schematic of an film capacitor is shown in Fig. 2

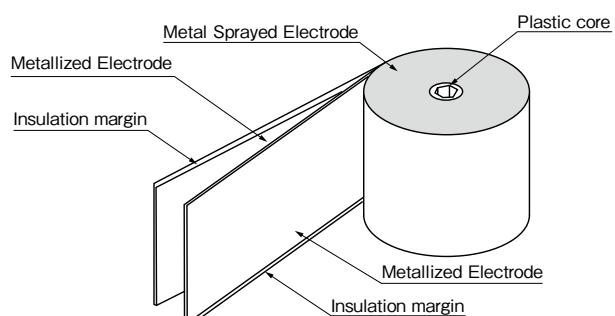

Fig-2

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

### 3 Basic parameters and terms

#### 3-1 Rated capacitance Cr

Nominal value of the capacitance at 20°C and measuring frequency range of 50 to 120 Hz.

#### 3-2 Rated voltage Ur

Maximum operating peak voltage of either polarity but of a non-reversing type waveform, for which the capacitor has been designed, for continuous operation.

It shall be higher than the sum of operating d.c. voltage and operating ripple peak voltage.

#### 3-3 Ripple voltage Ur

Peak-to-peak alternating component of the unidirectional voltage.

#### 3-4 Non-recurrent surge voltage Us

Peak voltage induced by a switching or any other disturbance of the system which is allowed for a limited number of times and for durations shorter than the basic period.

- Maximum duration: 50ms / pulse
- Maximum number of occurrences: 1000 (during load)

#### 3-5 Insulation voltage Ui

Rms value of a.c. voltage designed for the insulation between terminals of the capacitor to case or earth.

The insulation voltage is equal to the rated voltage of the capacitor, divided by  $\sqrt{2}$ , unless otherwise specified.

#### 3-6 Maximum current Imax

Maximum rms current for continuous operation.

#### 3-7 Maximum rate of voltage rise dV/dt

Maximum permissible repetitive rate of voltage rise of the operational voltage.

#### 3-8 Maximum peak current I $\hat{}$

Maximum permitted repetitive peak current that can occur during continuous operation.

The value is following:  $\hat{I} = C_R \times (dV/dt)$

#### 3-9 Maximum surge current Is

Admissible peak current induced by a switching or any other disturbance of the system.

- Maximum duration: 50ms / pulse
- Maximum number of occurrences: 1000

#### 3-10 Series resistance Rs

Effective ohmic resistance of the conductors of a capacitor under specified operating conditions.

#### 3-11 Equivalent series resistance ESR

The equivalent series resistance (ESR) represents all of the ohmic losses of the capacitor.

$$ESR = \frac{\operatorname{tg}\delta}{W \cdot C} = R_s + \frac{\operatorname{tg}\delta 0}{W \cdot C}$$

#### 3-12 Dielectric dissipation factor tgδ0

Constant dissipation factor of the dielectric material for all capacitors at their rated frequency.

The typical loss factor of polypropylene film is  $2 \times 10^{-4}$ .

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

#### 3-13 Loss factor of the capacitor tgδ

The dissipation factor is ratio between reactive power of the impedance of the capacitor and effective power when capacitor is submitted to a sinusoidal voltage of specified frequency, it is that ratio between the equivalent series resistance and the capacitive reactance of a capacitor.

#### 3-14 Dielectric power loss Pd

Loss power induced by dielectric polarization or dielectric conductance.

#### 3-15 Joule power loss Pj

Loss power induced by series resistance of the capacitor under rms current.

#### 3-16 Capacitor losses Pi

Active power dissipated in the capacitor.  $P_t = I^2 \text{rms} \times \text{ESR}$

#### 3-17 Maximum power loss Pmax

Maximum power loss at which the capacitor may be operated at the maximum case temperature.

#### 3-18 Self-inductance Ls

Represents the sum of all inductive elements which are for mechanical and construction reasons contained in any capacitor.

#### 3-19 Resonance frequency fr

Lowest frequency at which the impedance of the capacitor becomes minimum.

The value is following :  $fr = 1/(2\pi \times L_s)$

#### 3-20 Ambient temperature ΘA

Temperature of the air measured at the hottest position of the capacitor, under steady-state conditions, midway between two units.

If only one unit is involved, it is the temperature of surrounding air, measured 10cm away and at 2/3 of the case height of the capacitor under steady-state conditions.

#### 3-21 Maximum operating temperature Θmax

Highest temperature of the case at which the capacitor may be operated.

#### 3-22 Lowest operating temperature Θmin

Lowest temperature of the dielectric at which the capacitor may be energized.

#### 3-23 Thermal resistance Rth

The thermal resistance indicates by how many degrees the capacitor temperature at the hotspot rises above ΘA per watt of the heat dissipation loss.

#### 3-24 Hotspot temperature Θhs

Temperature at the hottest spot inside the capacitor.

The value is following:  $\Theta_{hs} = \Theta_A + P_t \times R_{th}$

#### 3-25 Temperature coefficient of capacitance α

The change rate of capacitance with temperature measured over a specified range of temperature.

#### 3-26 Voltage between terminals UTT

Voltage between terminals.

## 3-27 Voltage between terminals and case $U_{TC}$

Voltage between terminals and case.

## 3-28 Climatic category

The climatic category which the capacitor belongs to is expressed in three numbers separated by slashes, (I EC 60068-1 :example 40/85/56)

40 / 85 / 56

- days relevant to the damp heat test (56days)
- the upper category temperature (+85°C)
- the lower category temperature (-40°C)

## 3-29 Insulation Resistance (IR) /Time Constant (t)

The insulation resistance is the ratio between an applied D.C. voltage and the resulting leakage current after a minute of charge.

It is expressed in MΩ.

The time constant is expressed in seconds with the following formula:  $t [s] = IR [M\Omega] \times C [\mu F]$

## 3-30 Self-healing (Only for metallized film capacitor)

Process by which the electrical properties of the capacitor, after a local breakdown of the dielectric, are rapidly and essentially restored to the values before the breakdown.

The metal coatings of the metallized film, which are vacuum-deposited directly onto the plastic film, have a thickness of only several tens nm.

At weak points or impurities in the dielectric, a dielectric breakdown would occur.

The energy released by the arc discharge in the breakdown channel is sufficient to totally evaporate the thin metal coating in the vicinity of the channel.

The insulated region thus resulting around the former faulty area will cause the capacitor to regain its full operation ability.

## 3-31 Failure rate $\lambda$

Failure rate refers to the work to a moment has not failed products, at that time, the failure probability of occurrence in a time unit.

$$\lambda = \frac{r}{n \cdot t}$$

t: test time

n: test number

r: number of failures

## 4 Expected lifetime of the capacitor

The expected lifetime of the capacitor depends on the applied voltage and the hot spot temperature during operation.

For capacitors applied in different situation, the designed average service lifes are different.

The capacitors used in DC-Link circuits will have a expected lifetime of probable 100000 hrs at rated voltage and 70t hot spot temperature.

### 4-1 The hotspot temperature estimation

During operation, the ripple current flowing through the capacitor will generate heat due to the series resistance ( $R_s$ ) of the capacitor.

Considering the above factors hotspot temperature estimation formula is as follows:

$$\Theta_{hs} = \Theta_A + I_{rms} \times ESR \times R_{th}$$

$\Theta_{hs}$  : Hotspot Temperature

$\Theta_A$  : Environment Temperature

$I_{rms}$  : Ripple Current

ESR : Equivalent series resistance

$R_{th}$  : Thermal Resistance

### 4-2 Estimation of lifetime calculation

Considering the fever caused by ripple current, internal resistance (hotspot temperature), as well as the applied voltage, life estimation formula:

$$L = L_0 \times (U_R / U)^n \times 2^{(\Theta - \Theta_{hs}) / m}$$

L : The calculation of Lifetime, hrs

$L_0$  : Rated Lifetime (100000hrs)

U : Working Voltage, VDC

$U_R$  : Rated Voltage, VDC

n : Acceleration Coefficient of Voltage,  
experienced value: 8-12

$\Theta_{hs}$  : The Actual or Calculated Hotspot Temperature, VC

$\Theta$  : Rated Hotspot Temperature, 70 °C

m : Acceleration Coefficient of Temperature,  
experienced value: 7-10

PS: Typically the capacity change rate > ± 3%, determined that product failure

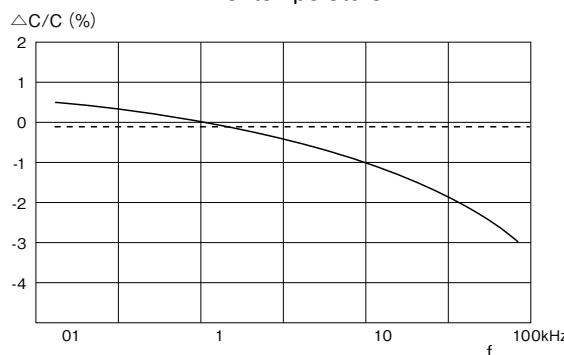

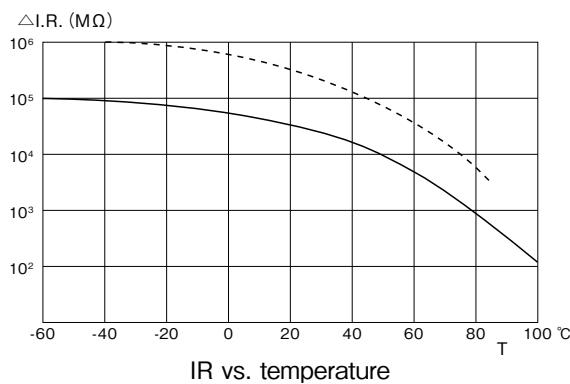

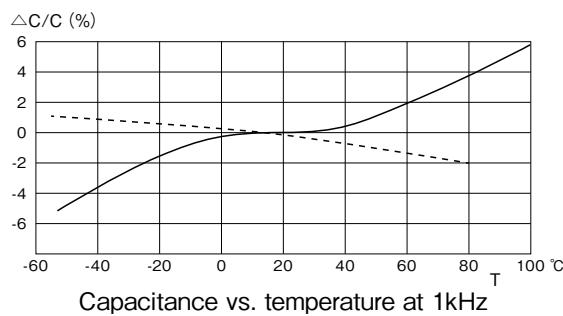

Expected lifetime is a statistical value calculated on the basis of experience and on theoretical evaluations.

The above formula only as a theoretical reference.

The diagrams should be considered only as a theoretical reference.

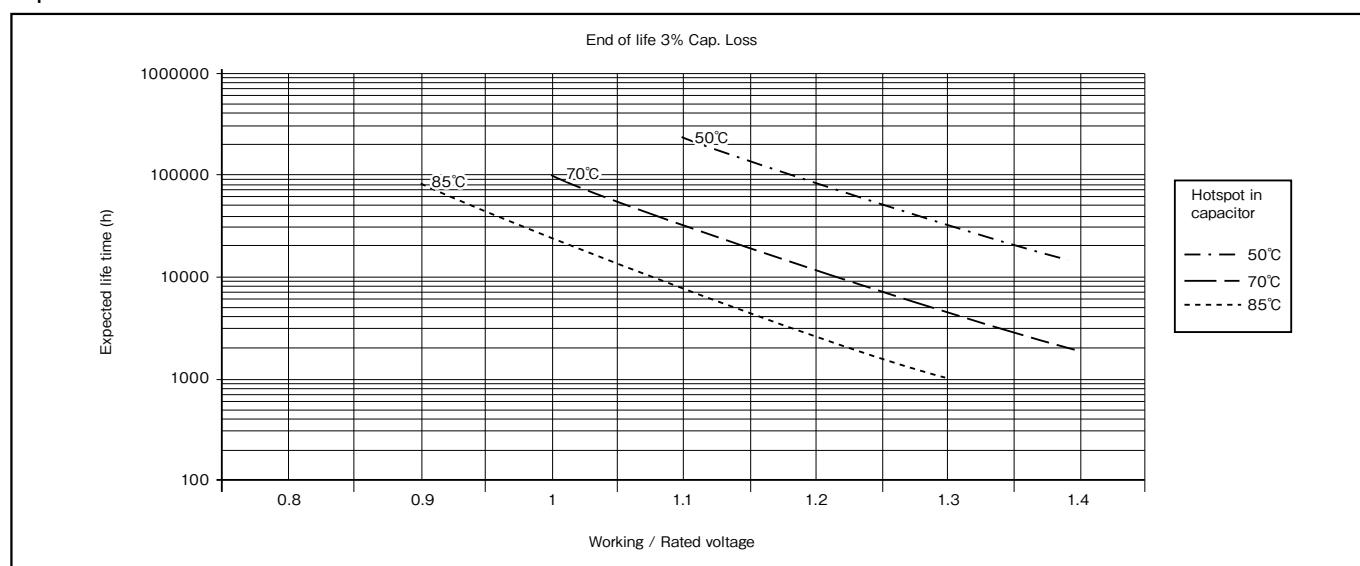

Please consult our technical department in case of working condition different from the rated ones.

## 5 Electrical behaviour

----- Polypropylene Film  
—— Polyester Film

## Expected life time curve

NOTE : Design, Specifications are subject to change without notice.  
It is recommended that you shall obtain technical specifications from ELNA to ensure that the component is suitable for your use.

## CAUTION

Observe the following to  
ensure safe operation.

1. The models and specification values contained in this catalog are for reference purposes only. During actual use or when placing an order, please request "drawings" and make your purchase or use the purchased product based on those drawings.
2. In order to ensure that products are used correctly and safely, always make sure to read the cautions for using prior to using the product.

## NOTE

1. Since the contents contained are subject to changes in specifications, dimensions and so forth without notice due to modification, please confirm the contents when placing an order.  
If any of the matters described here are unclear, please inquire at one of our nearby sales offices.
2. The contents of this catalog are valid as of December 2016.
